⚡ RaceTracker Pro — User Guide

Running a Checkpoint

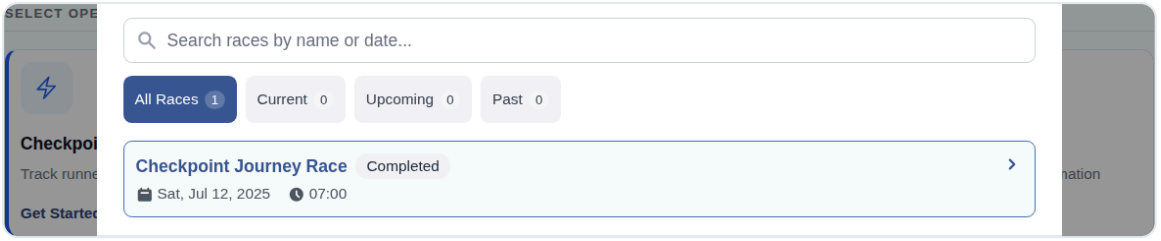
Running a Checkpoint

Steps for checkpoint volunteers. Covers opening a checkpoint, marking off runners individually and in bulk, reviewing counts, and exporting data.

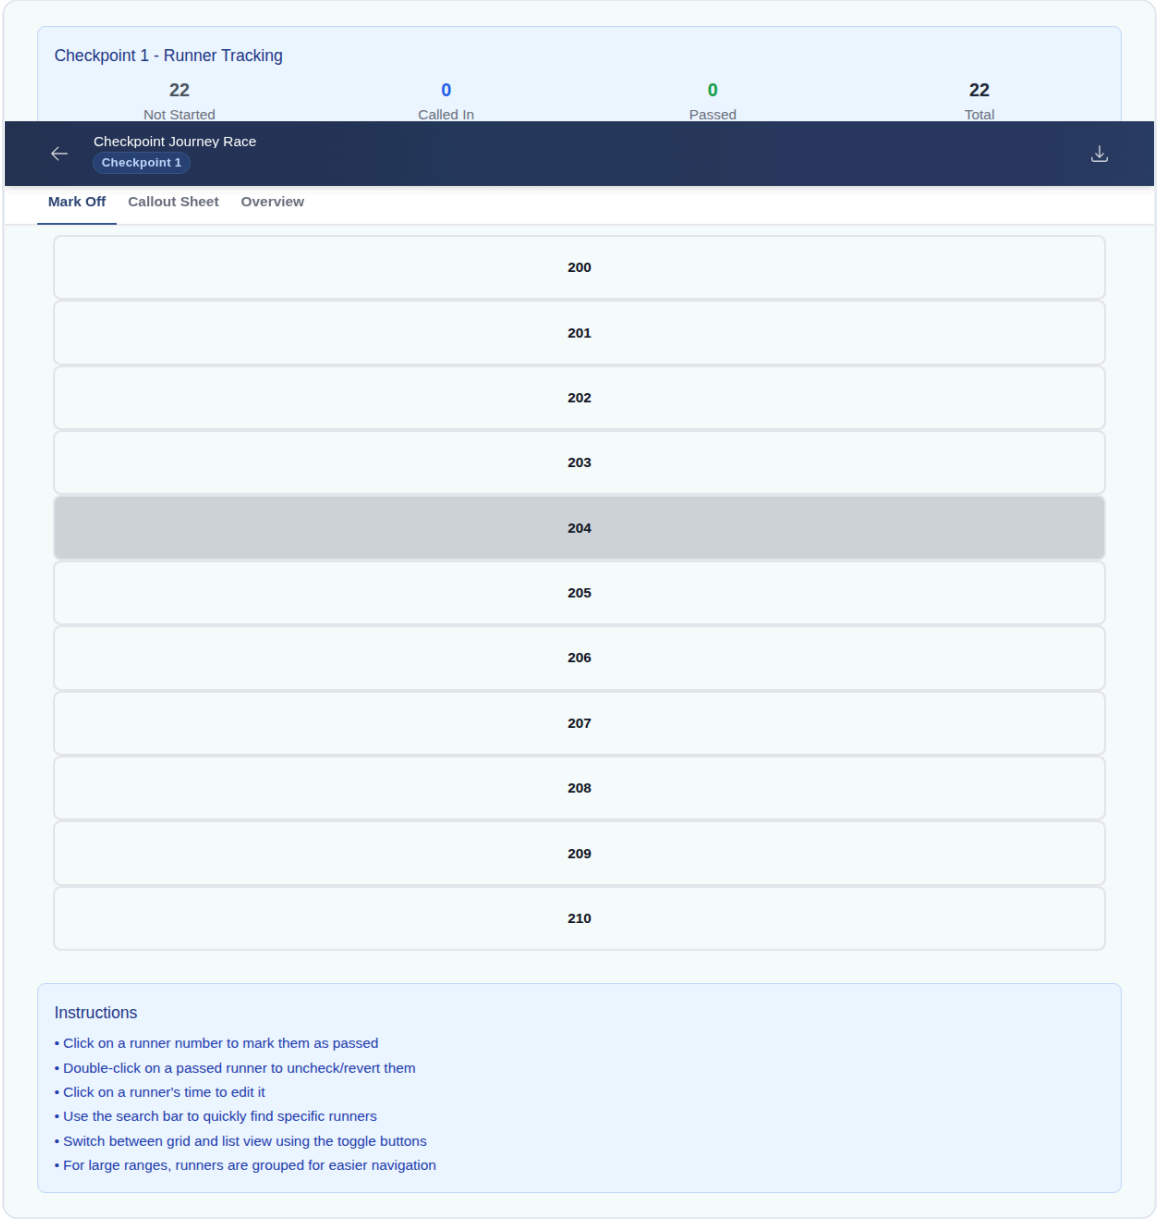
Navigates to checkpoint and sees runner grid

A checkpoint volunteer opens the app, taps "Checkpoint Operations", selects their race, and arrives at the correct checkpoint screen. This test confirms that the grid of runner bib numbers — the list of every runner they need to watch for — is visible and fully loaded.

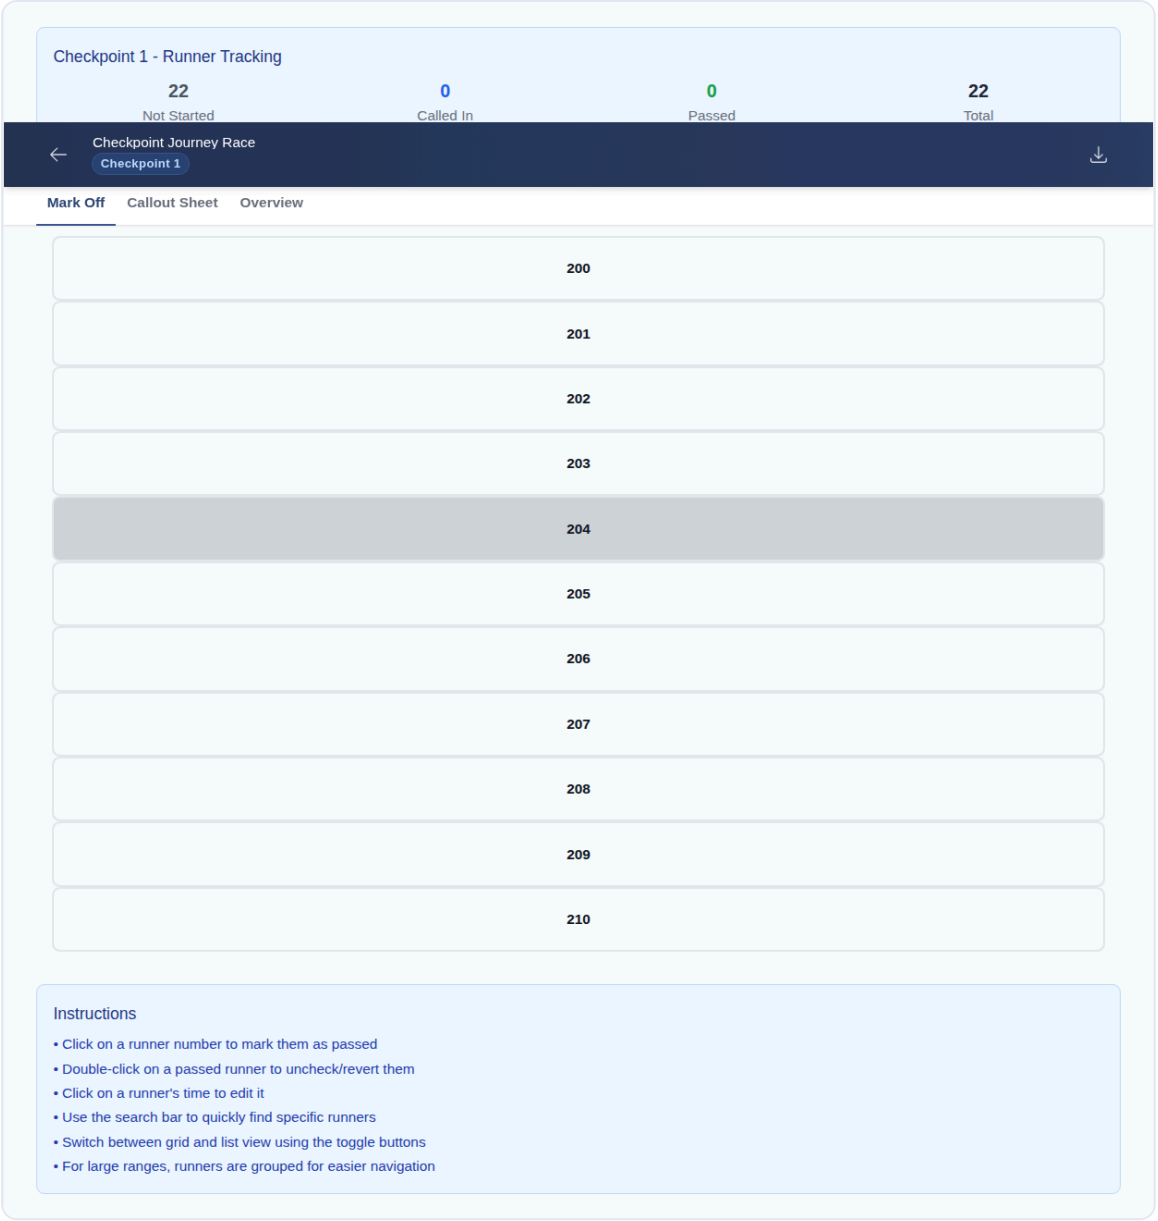
Home — tap Checkpoint Operations module card



Select Race modal — choose race from list



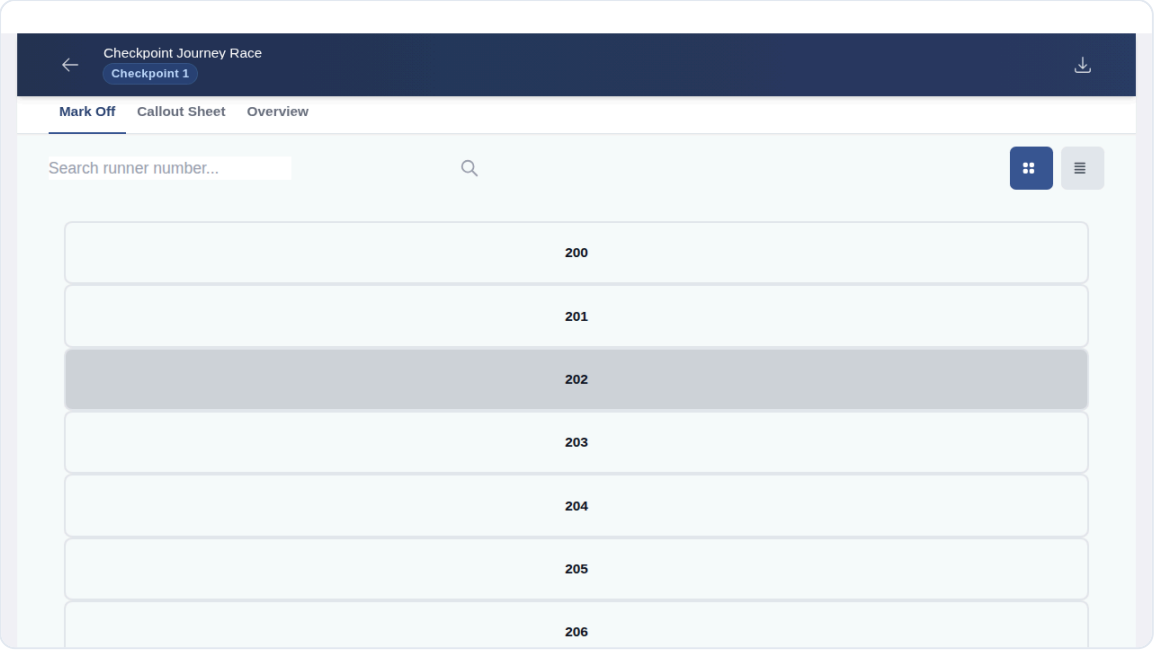
Checkpoint view — runner grid loaded with bib numbers 200–210



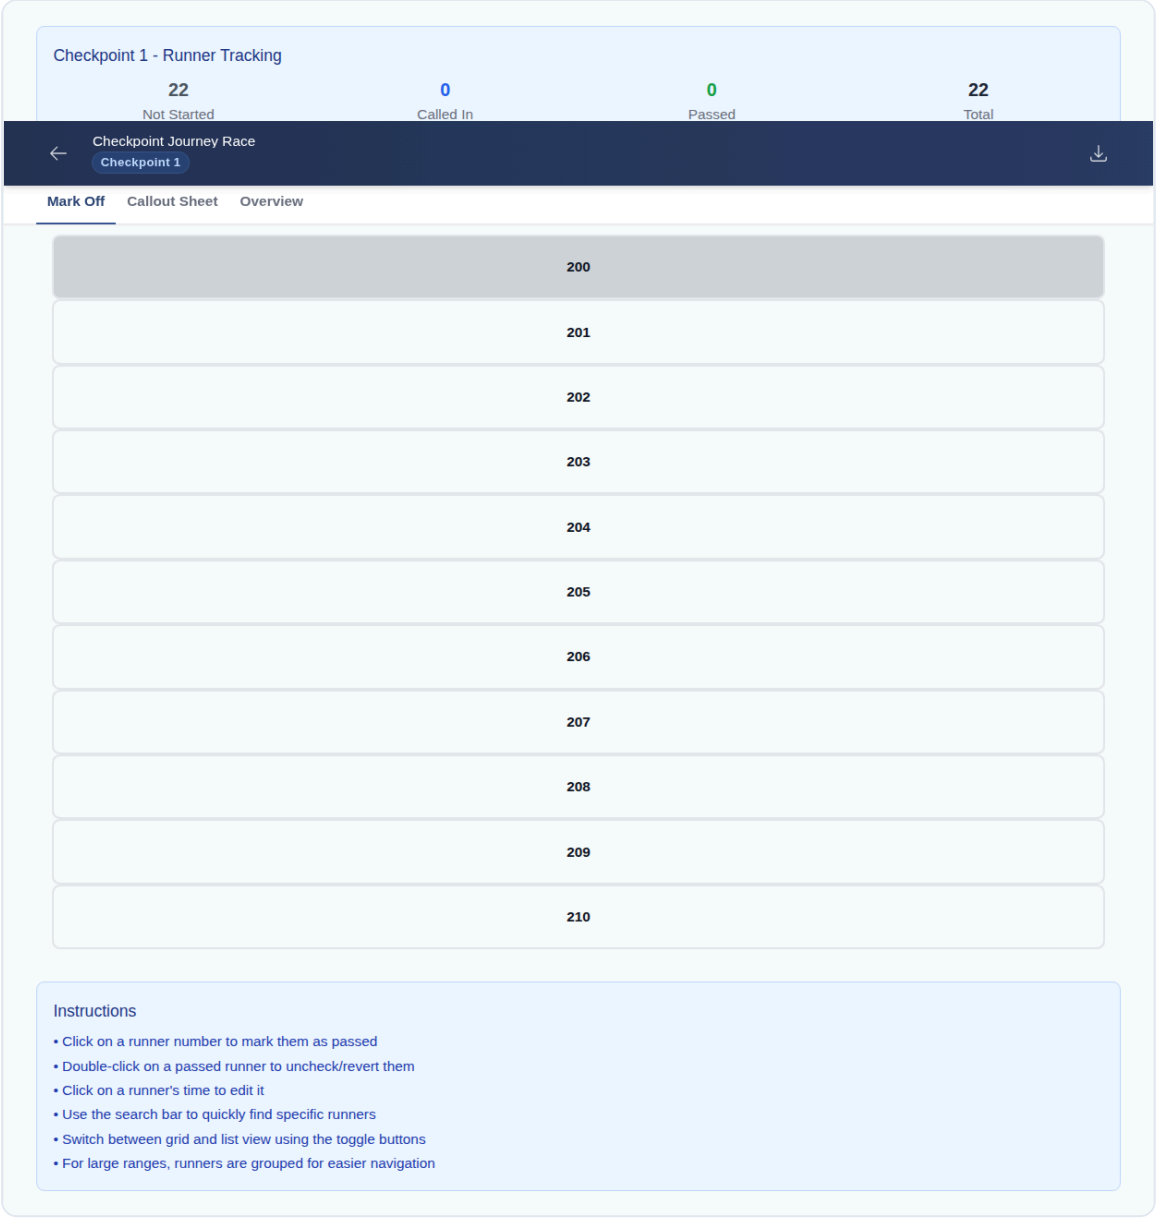
Marks off a single runner via the runner grid

A checkpoint volunteer clicks on a single runner's bib number tile in the grid to record that the runner passed through. The tile should change colour or appearance to make it obvious that runner has been marked as "through".

Checkpoint view — runner grid visible



Runner grid — tap first runner tile (200s range)



Runner tile — marked state applied

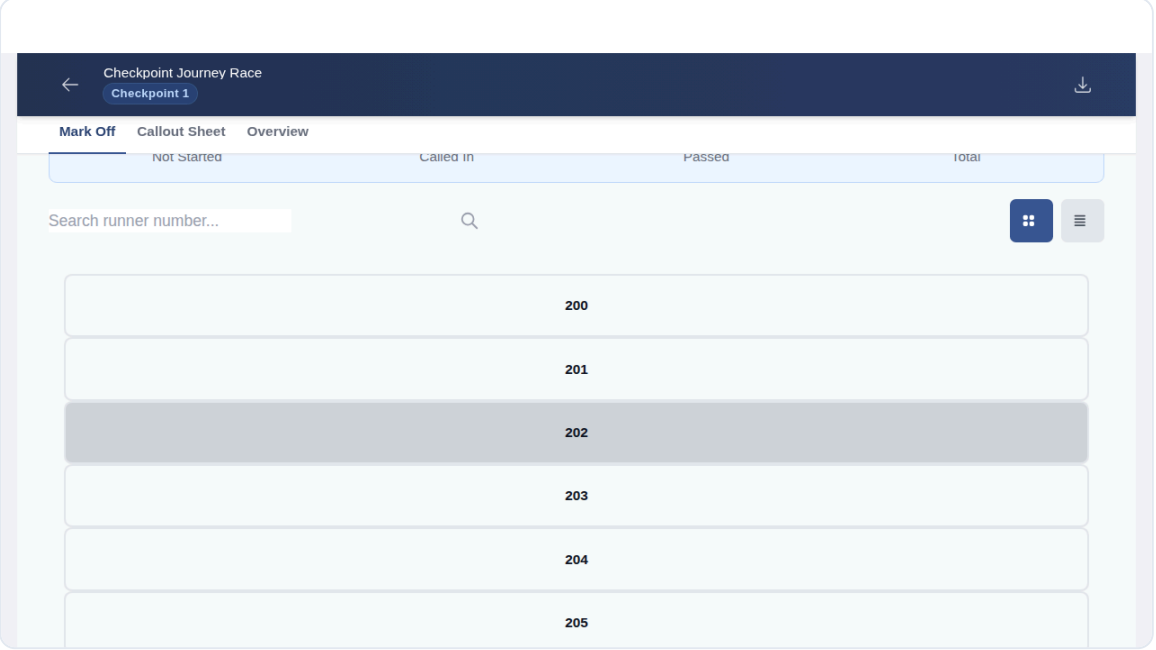
Instructions

- Click on a runner number to mark them as passed
- Double-click on a passed runner to uncheck/revert them
- Click on a runner's time to edit it
- Use the search bar to quickly find specific runners
- Switch between grid and list view using the toggle buttons
- For large ranges, runners are grouped for easier navigation

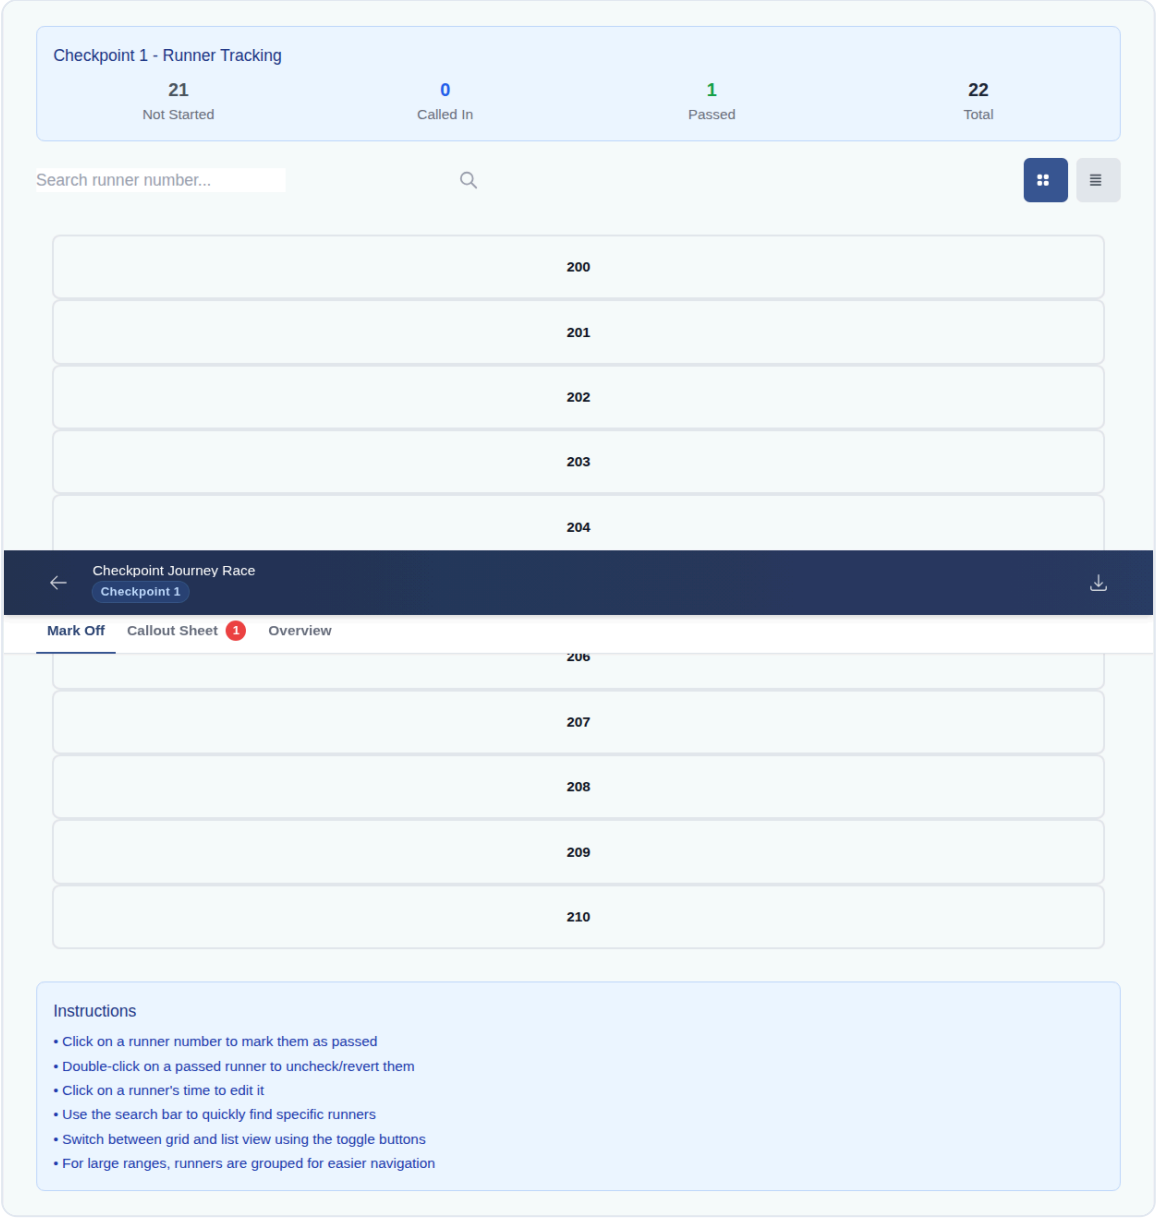
Marks off multiple runners via Quick Entry

Instead of finding runners in the grid, a volunteer can just type a bib number and press Enter to record it quickly. This test enters two bib numbers one after the other using the quick-entry shortcut and confirms both runners are marked off.

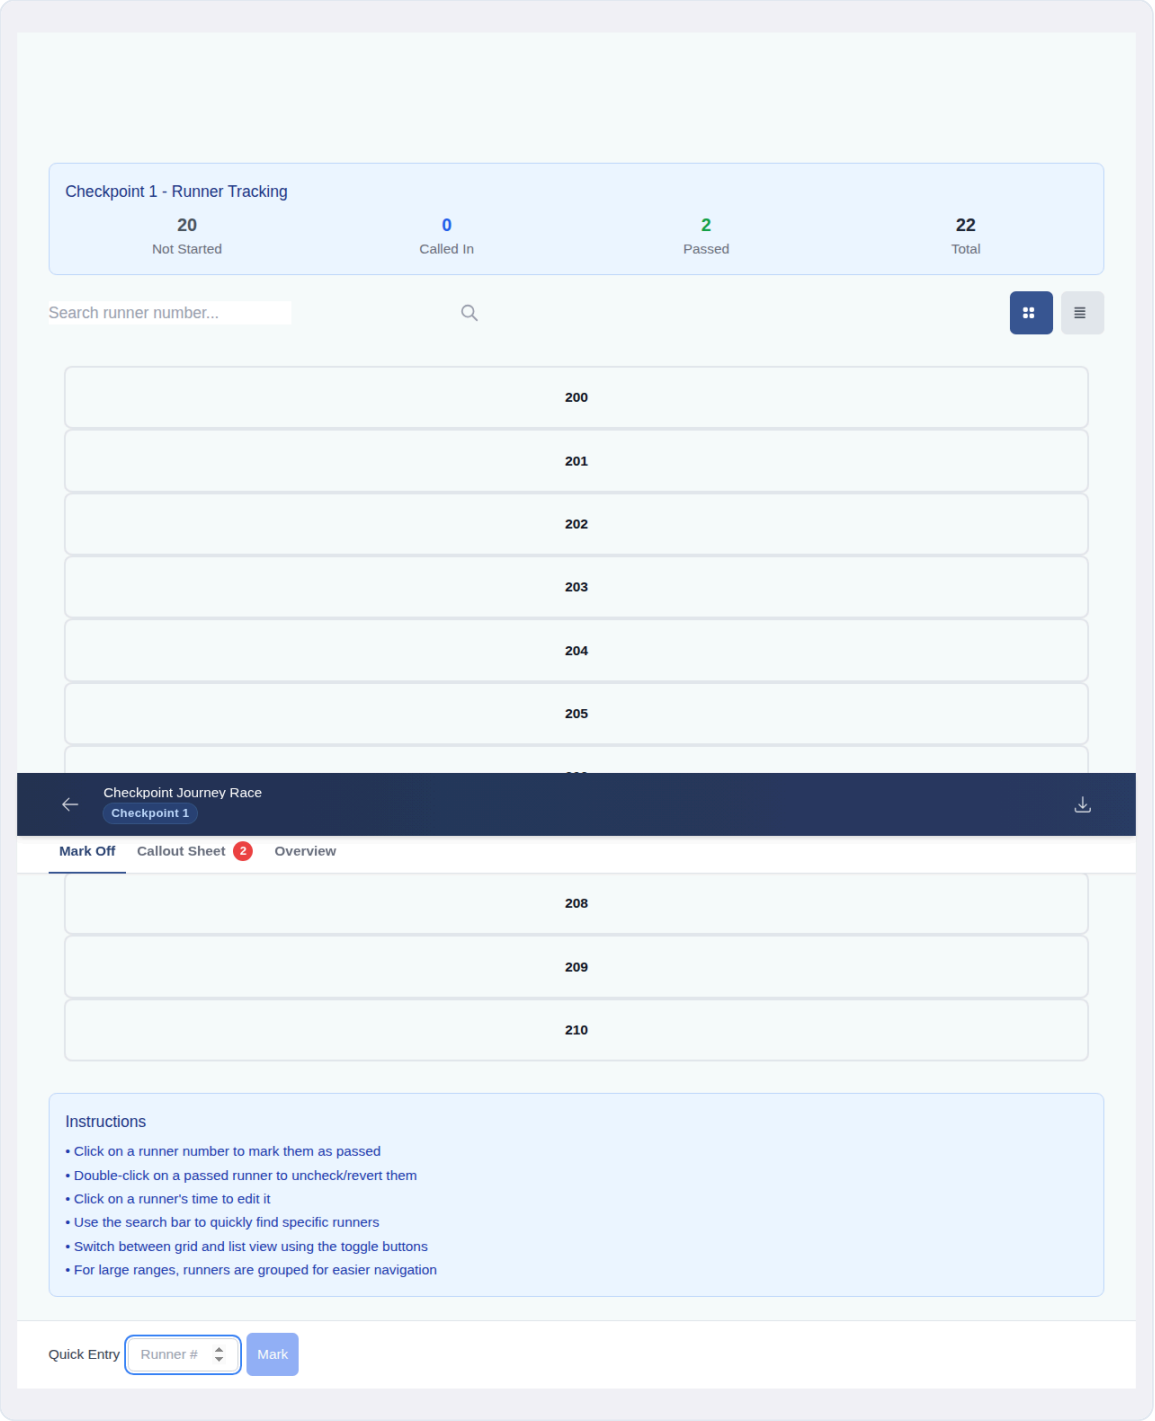
Checkpoint view — Quick Entry bar visible



Quick Entry — type first bib number and press Enter



Quick Entry — type second bib number and press Enter



Runner grid — both runners marked off

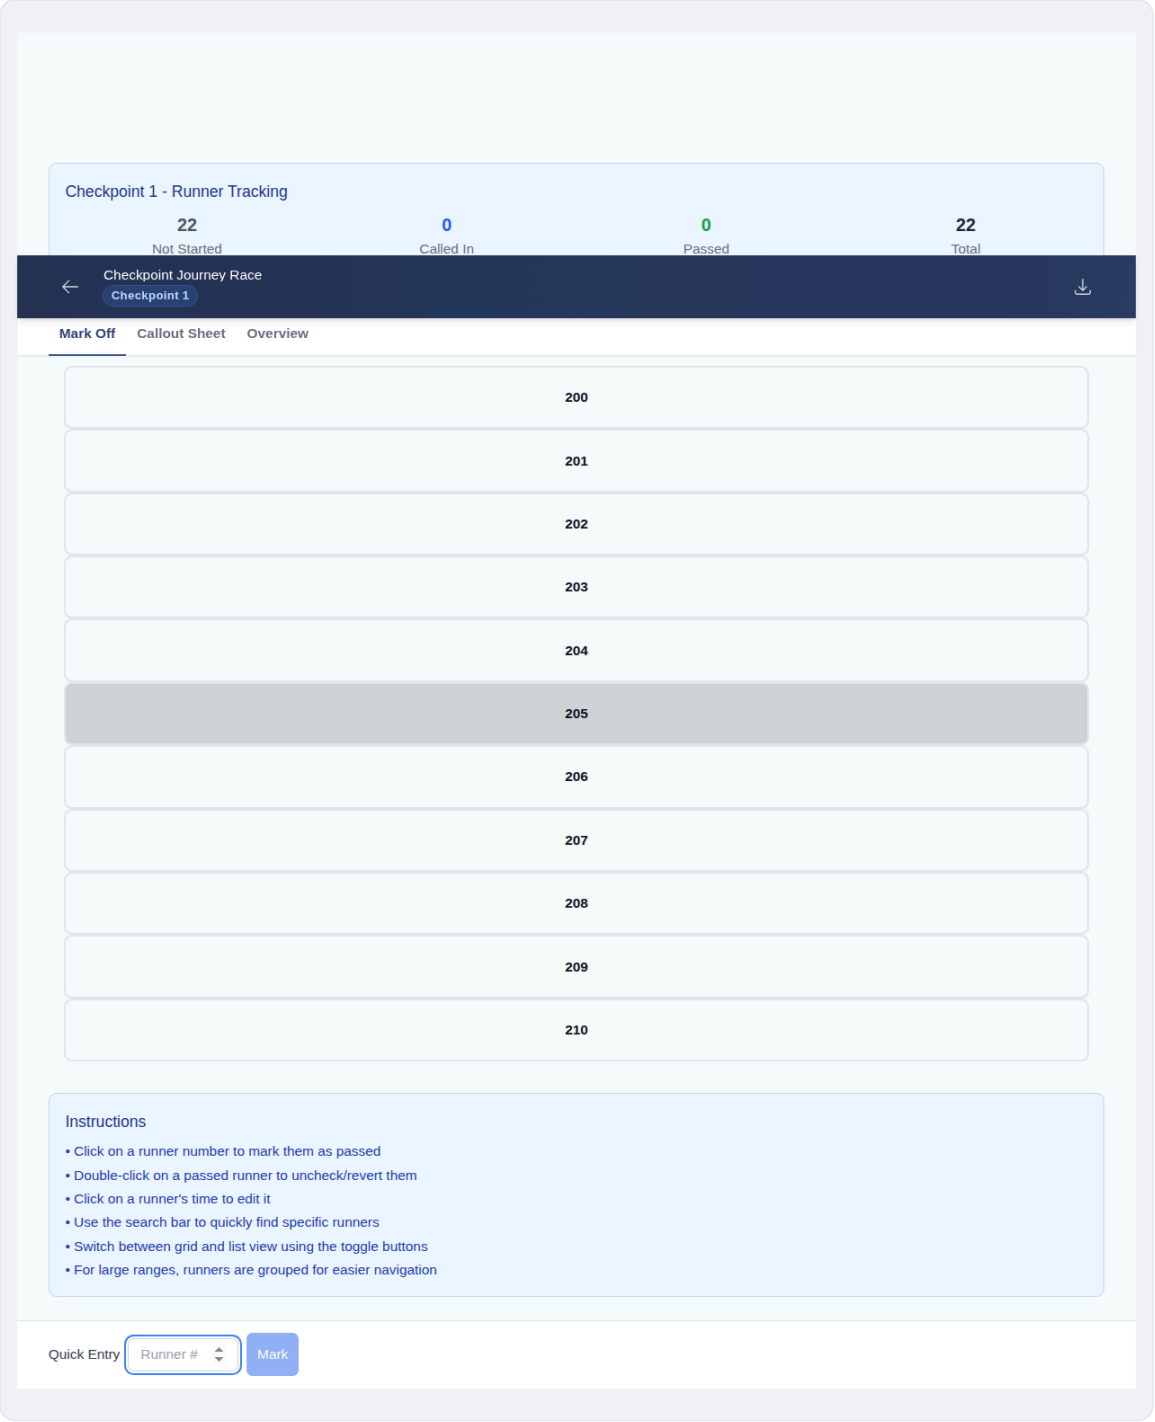
Instructions
• Click on a runner number to mark them as passed
• Double-click on a passed runner to uncheck/revert them
• Click on a runner's time to edit it
• Use the search bar to quickly find specific runners
• Switch between grid and list view using the toggle buttons
• For large ranges, runners are grouped for easier navigation

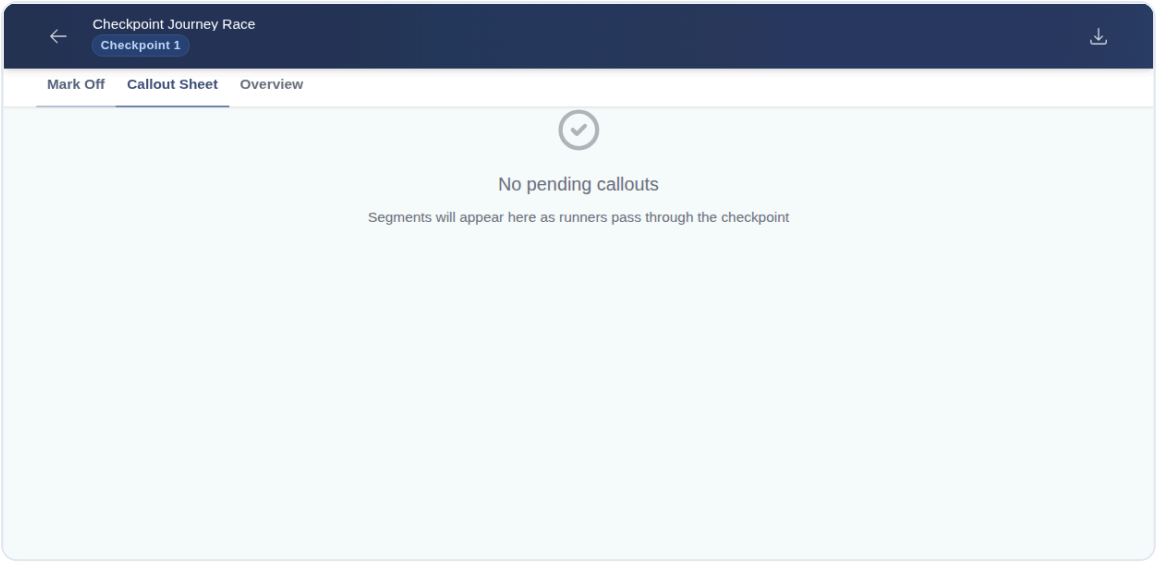
Switches to Callout Sheet tab

The Callout Sheet tab shows the list of runners who have not yet been recorded at this checkpoint. Volunteers read these numbers out over the radio to base station. This test checks the tab loads correctly and the list is visible.

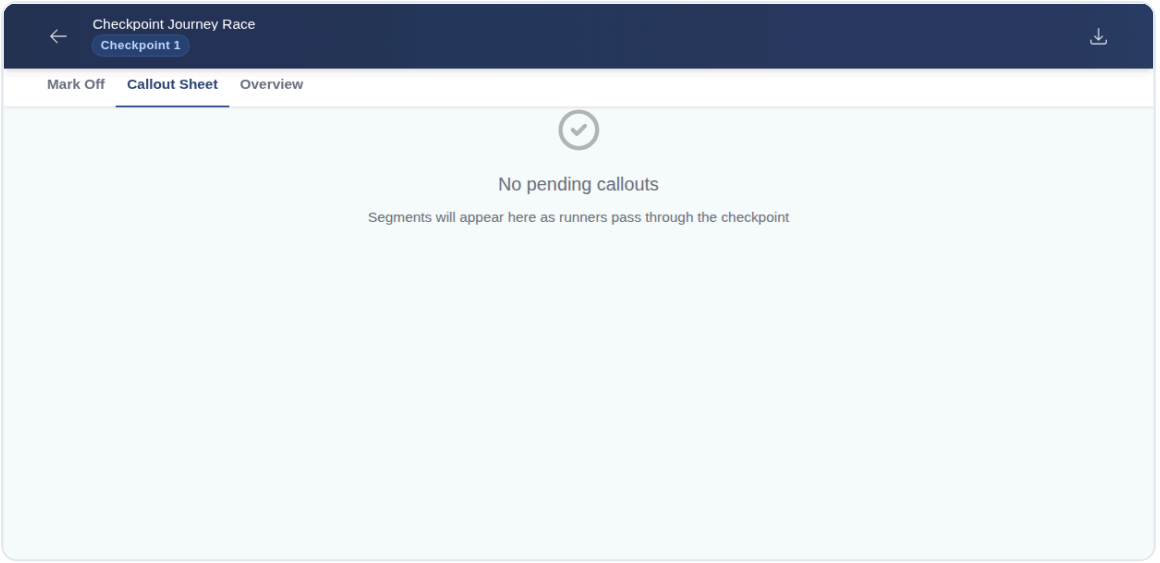
Checkpoint view — Mark Off tab active



Callout Sheet tab — tap to switch



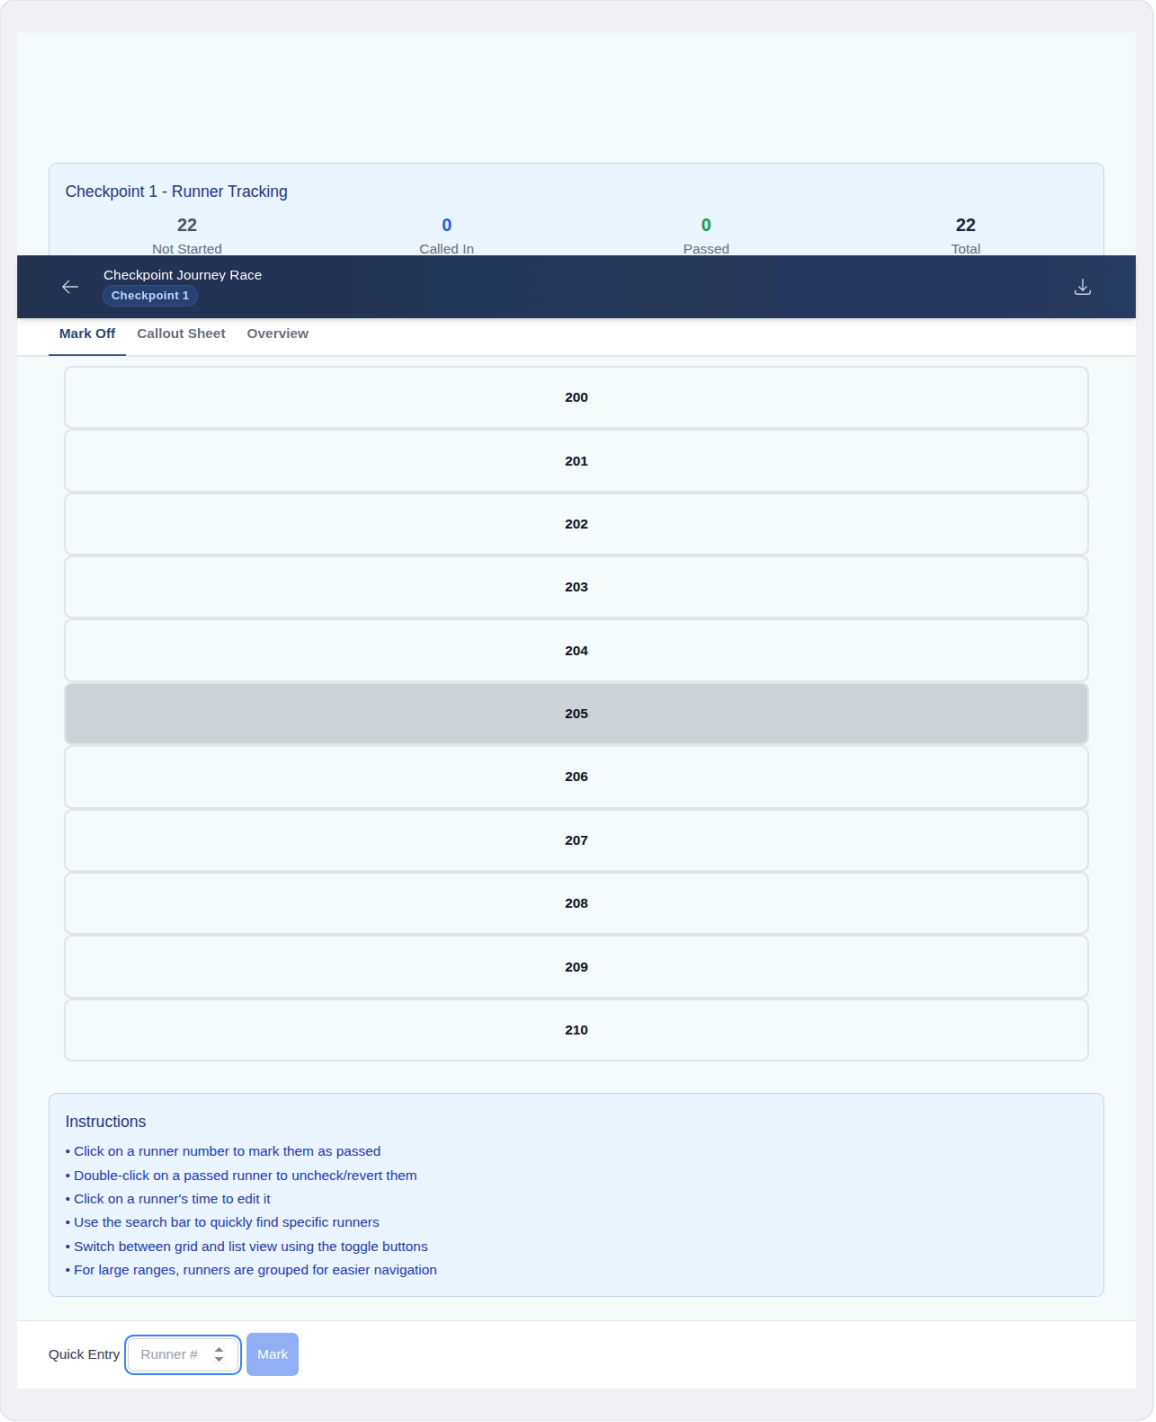
Callout Sheet — unrecorded runners listed



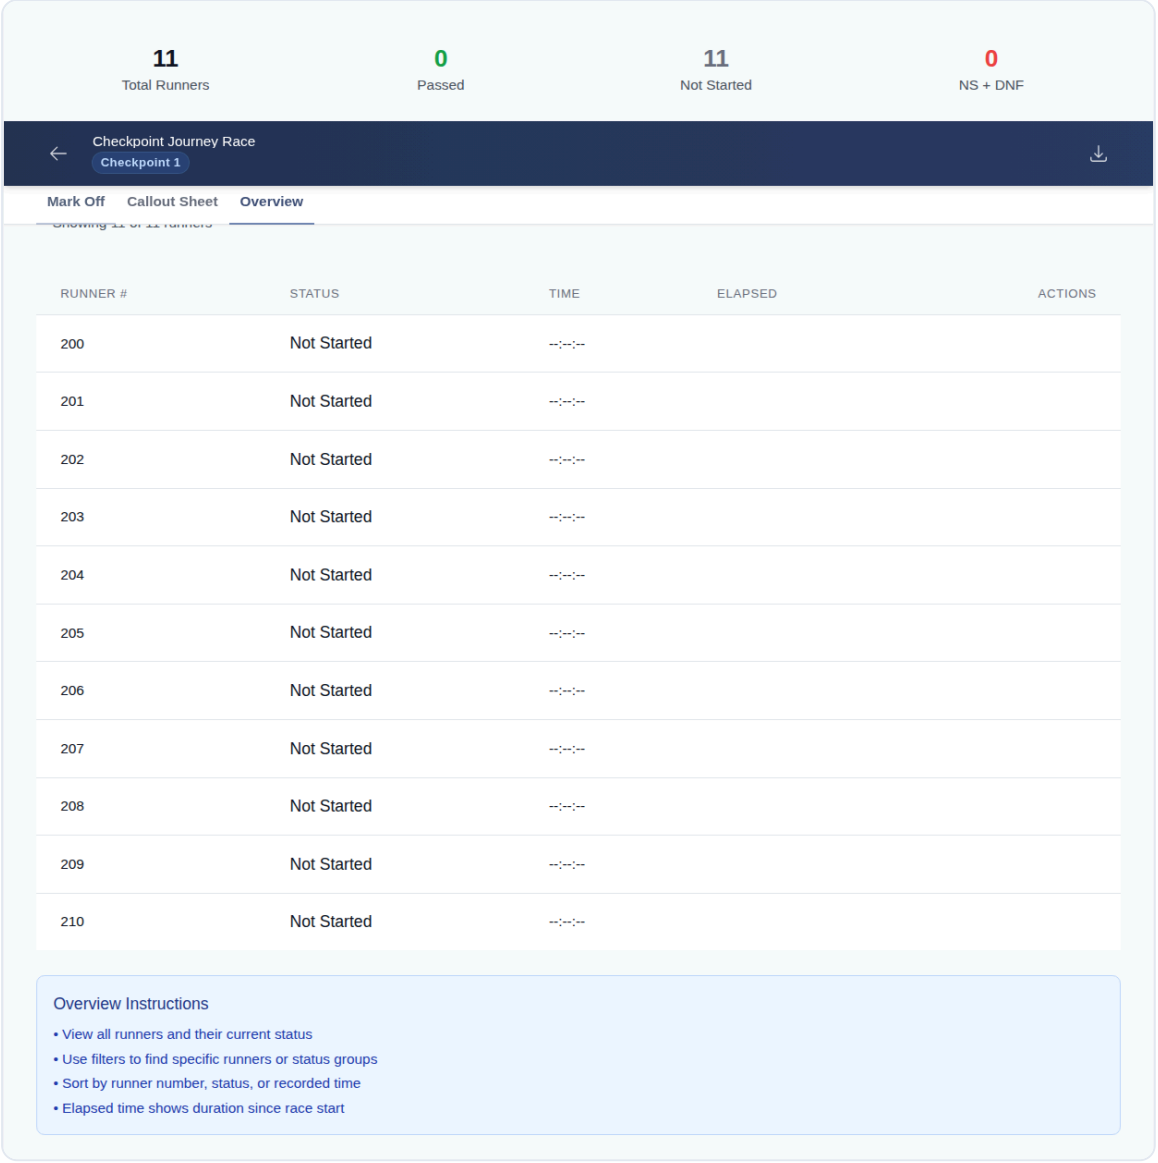
Switches to Overview tab and shows runner counts

The Overview tab shows a summary — how many runners have been through, how many are still expected, and other totals. This test confirms those summary numbers appear correctly when the tab is selected.

Checkpoint view — navigate to checkpoint



Overview tab — tap to switch



Overview — runner count summary visible

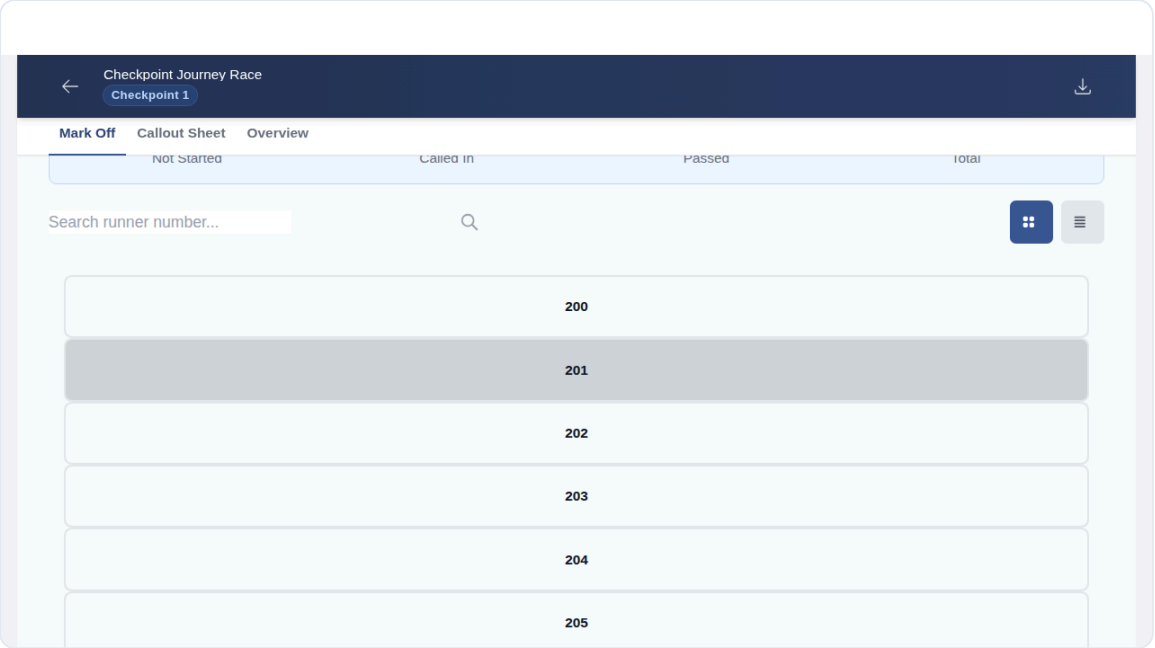
Overview Instructions

- View all runners and their current status
- Use filters to find specific runners or status groups
- Sort by runner number, status, or recorded time
- Elapsed time shows duration since race start

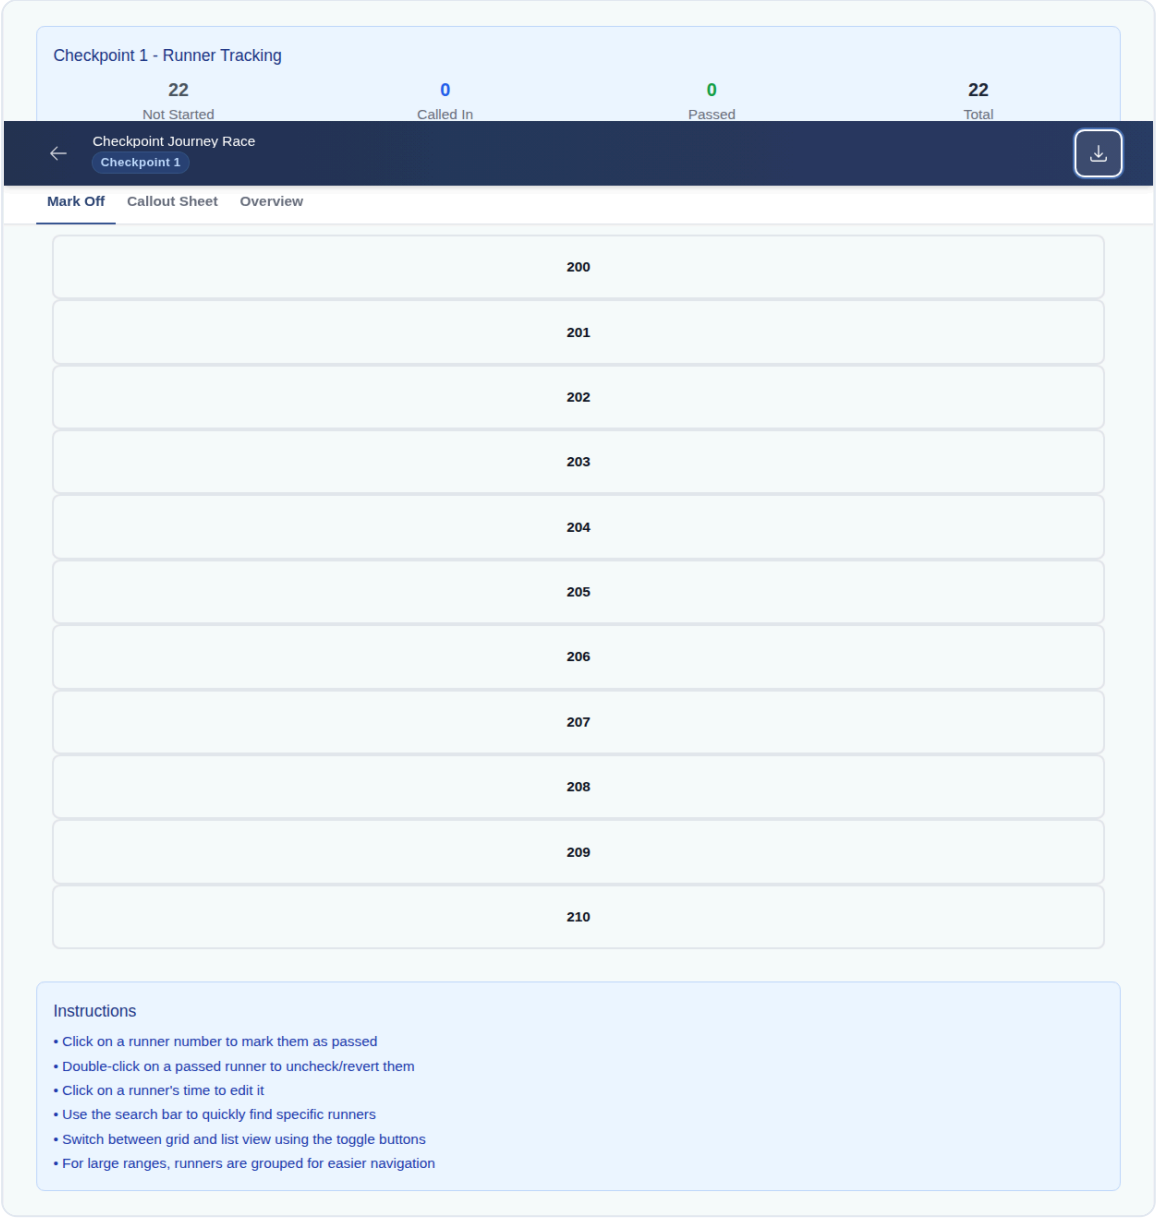
Can export checkpoint results

At the end of a checkpoint shift, a volunteer may need to export their recorded data to share with base station or keep as a backup. This test checks that the export option can be opened from the checkpoint screen.

Checkpoint view — navigate to checkpoint



Export option — triggers JSON download



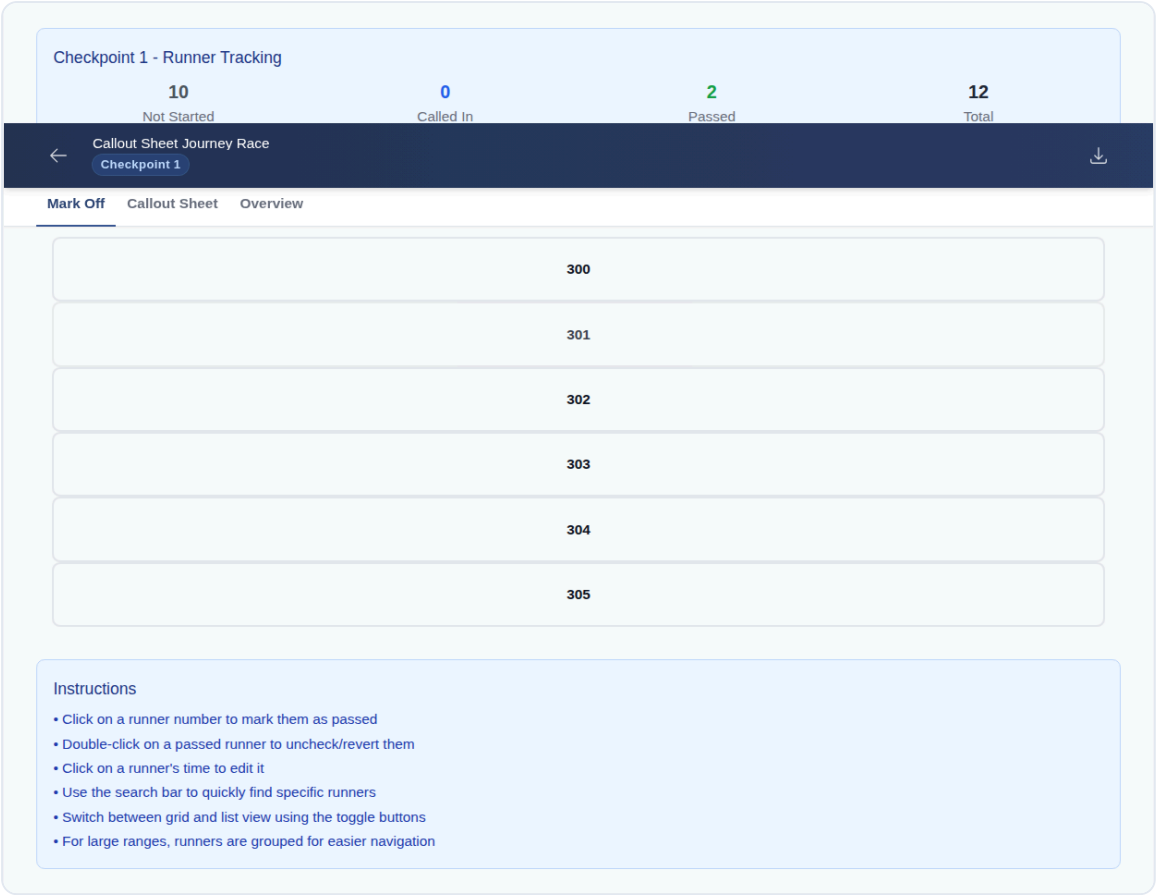
Navigates from race overview to a checkpoint

From the race overview, a race director can jump straight to any checkpoint's live mark-off screen. This test clicks the Checkpoint 1 link and confirms the checkpoint mark-off screen opens.

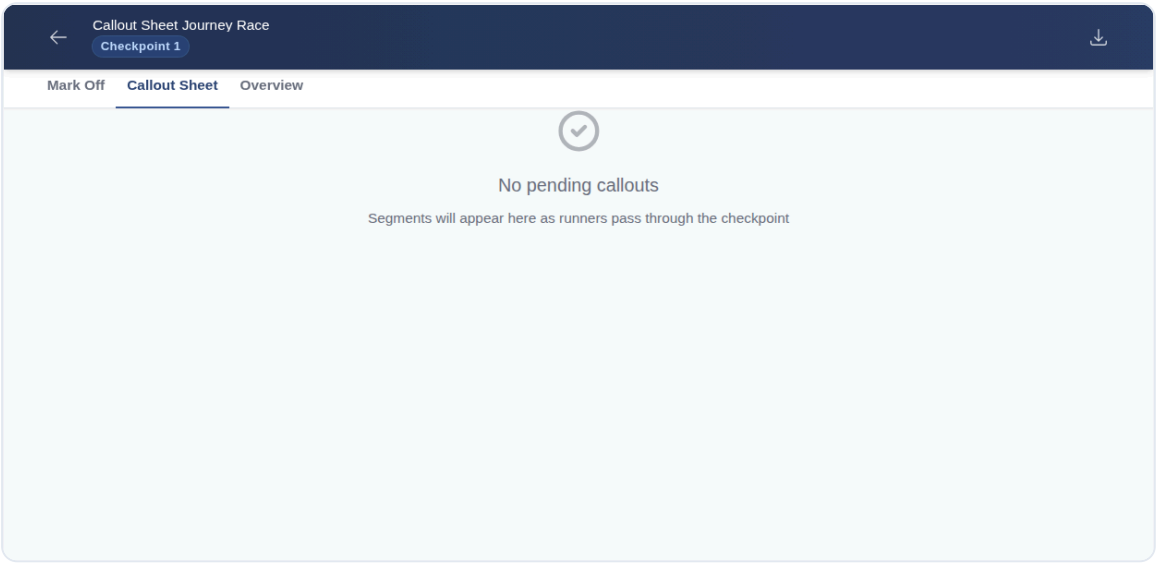
Callout sheet tab shows runners who passed but not called in

The Callout Sheet tab lists all runners who have been marked as passed at the checkpoint but have not yet been confirmed as called in to base station. Checkpoint volunteers use this list to make radio calls.

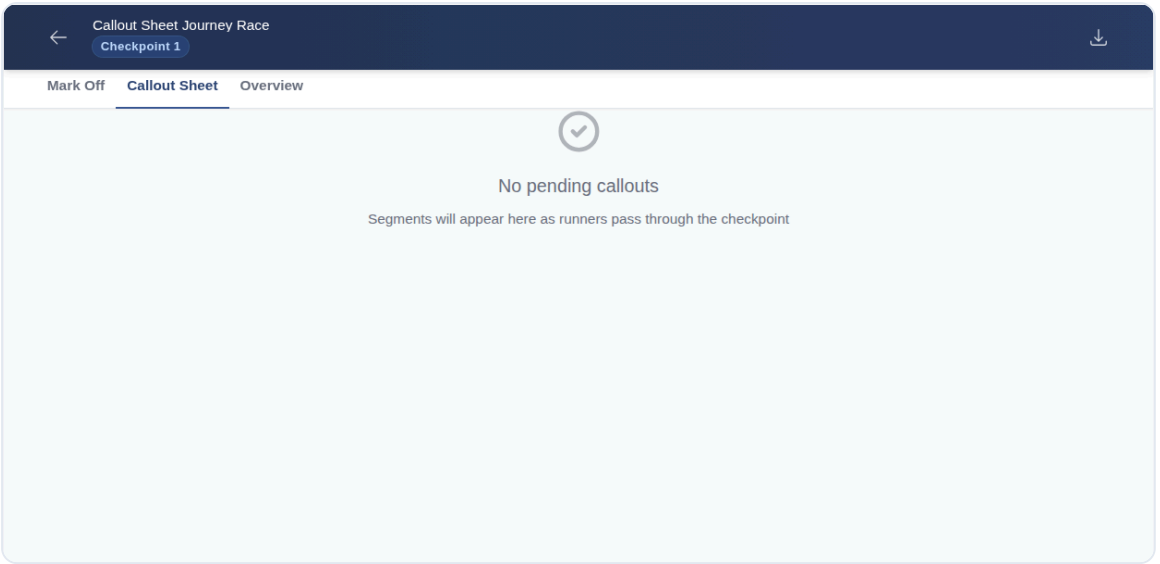
Mark Off tab — mark two runners as passed



Callout Sheet tab — click to switch



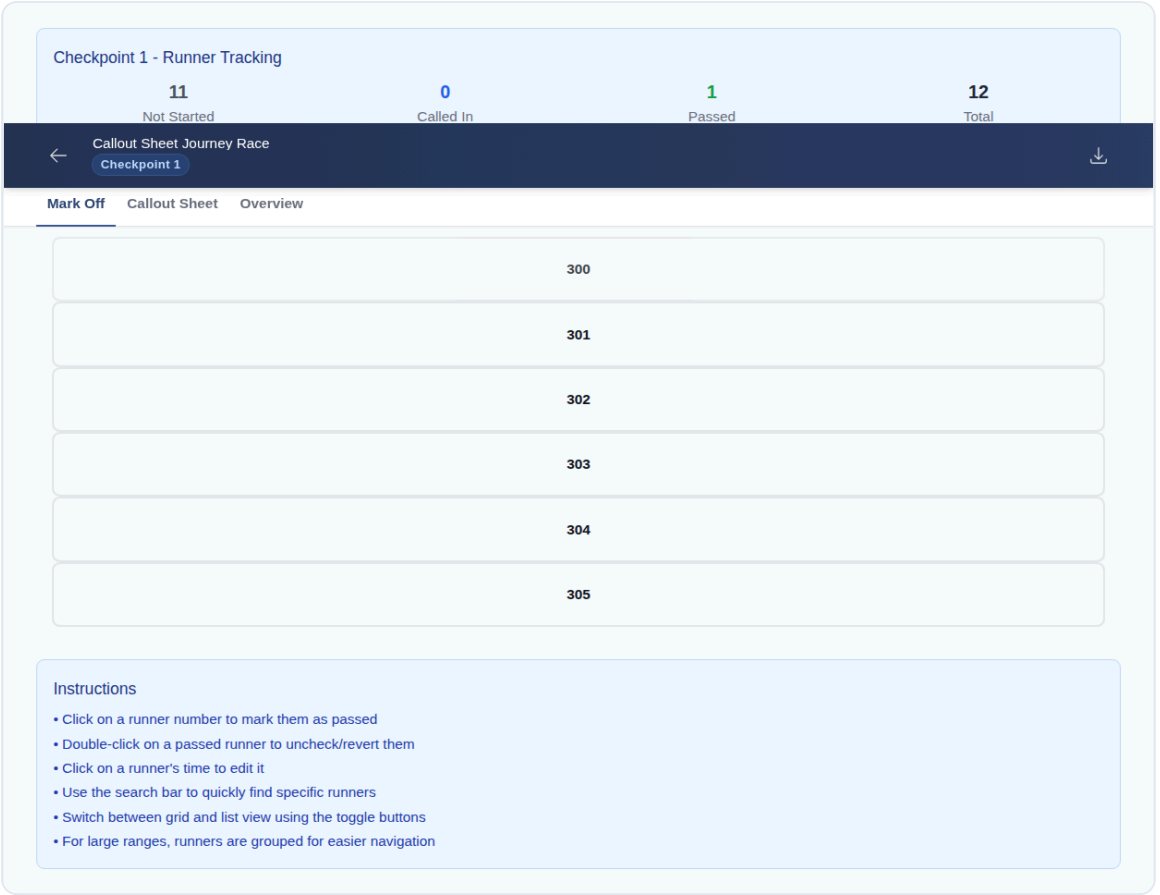
Callout Sheet — verify content is visible



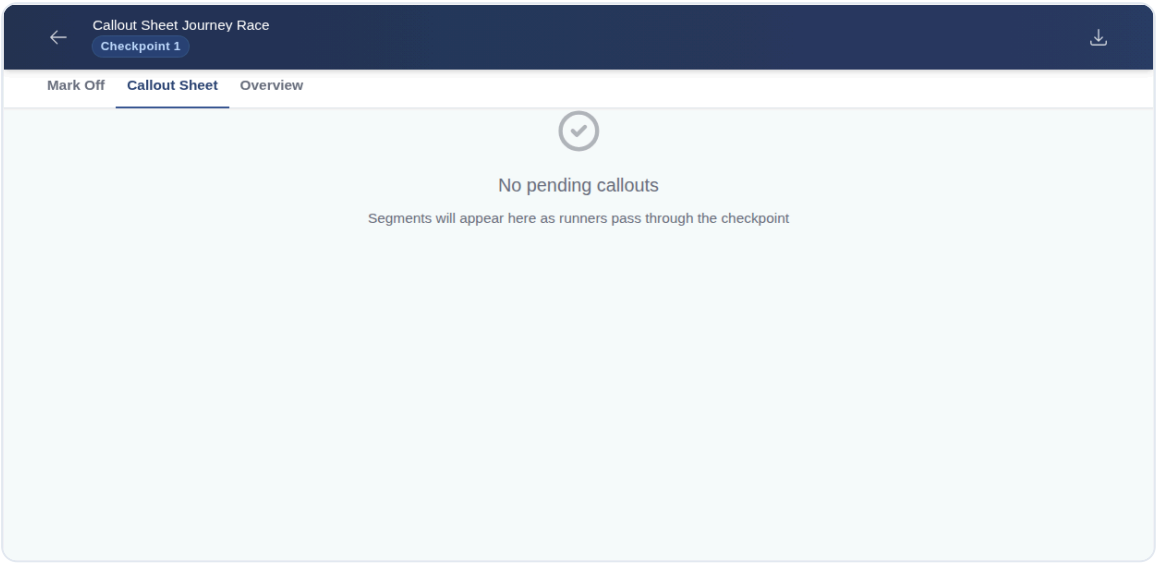
Pending count badge decrements when runner is called in

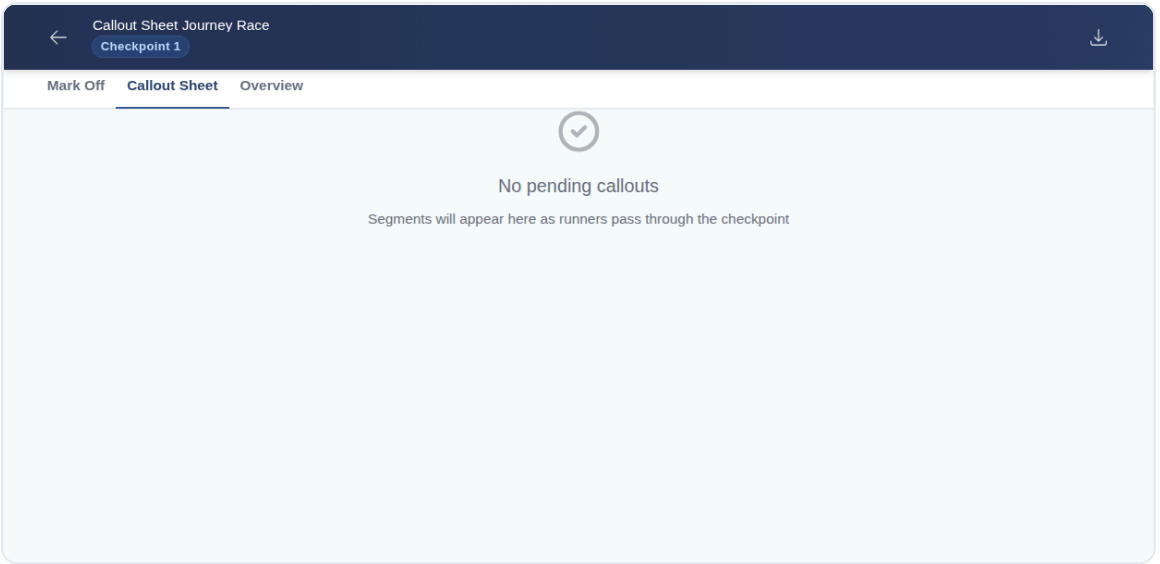
When a checkpoint volunteer marks a runner as called in, the pending count badge on the Callout Sheet tab decreases by one. If all runners have been called in the badge disappears.

Mark Off tab — mark a runner to create a callout segment



Tab bar — check for pending count badge





Callout Sheet — click Mark Called if a pending segment exists
