CHECKPOINT VOLUNTEER

Running a Checkpoint

Everything a checkpoint volunteer does on race day — from opening the app to marking off runners and calling in numbers to base station.

👤 **ABOUT THIS JOURNEY**

Sam — Sam is a checkpoint volunteer stationed at Checkpoint 1. Sam arrives before the first runner, opens RaceTracker Pro on a tablet, and is responsible for recording every runner who passes through and calling in missing numbers to the base station operator.

1 Open the Checkpoint Screen

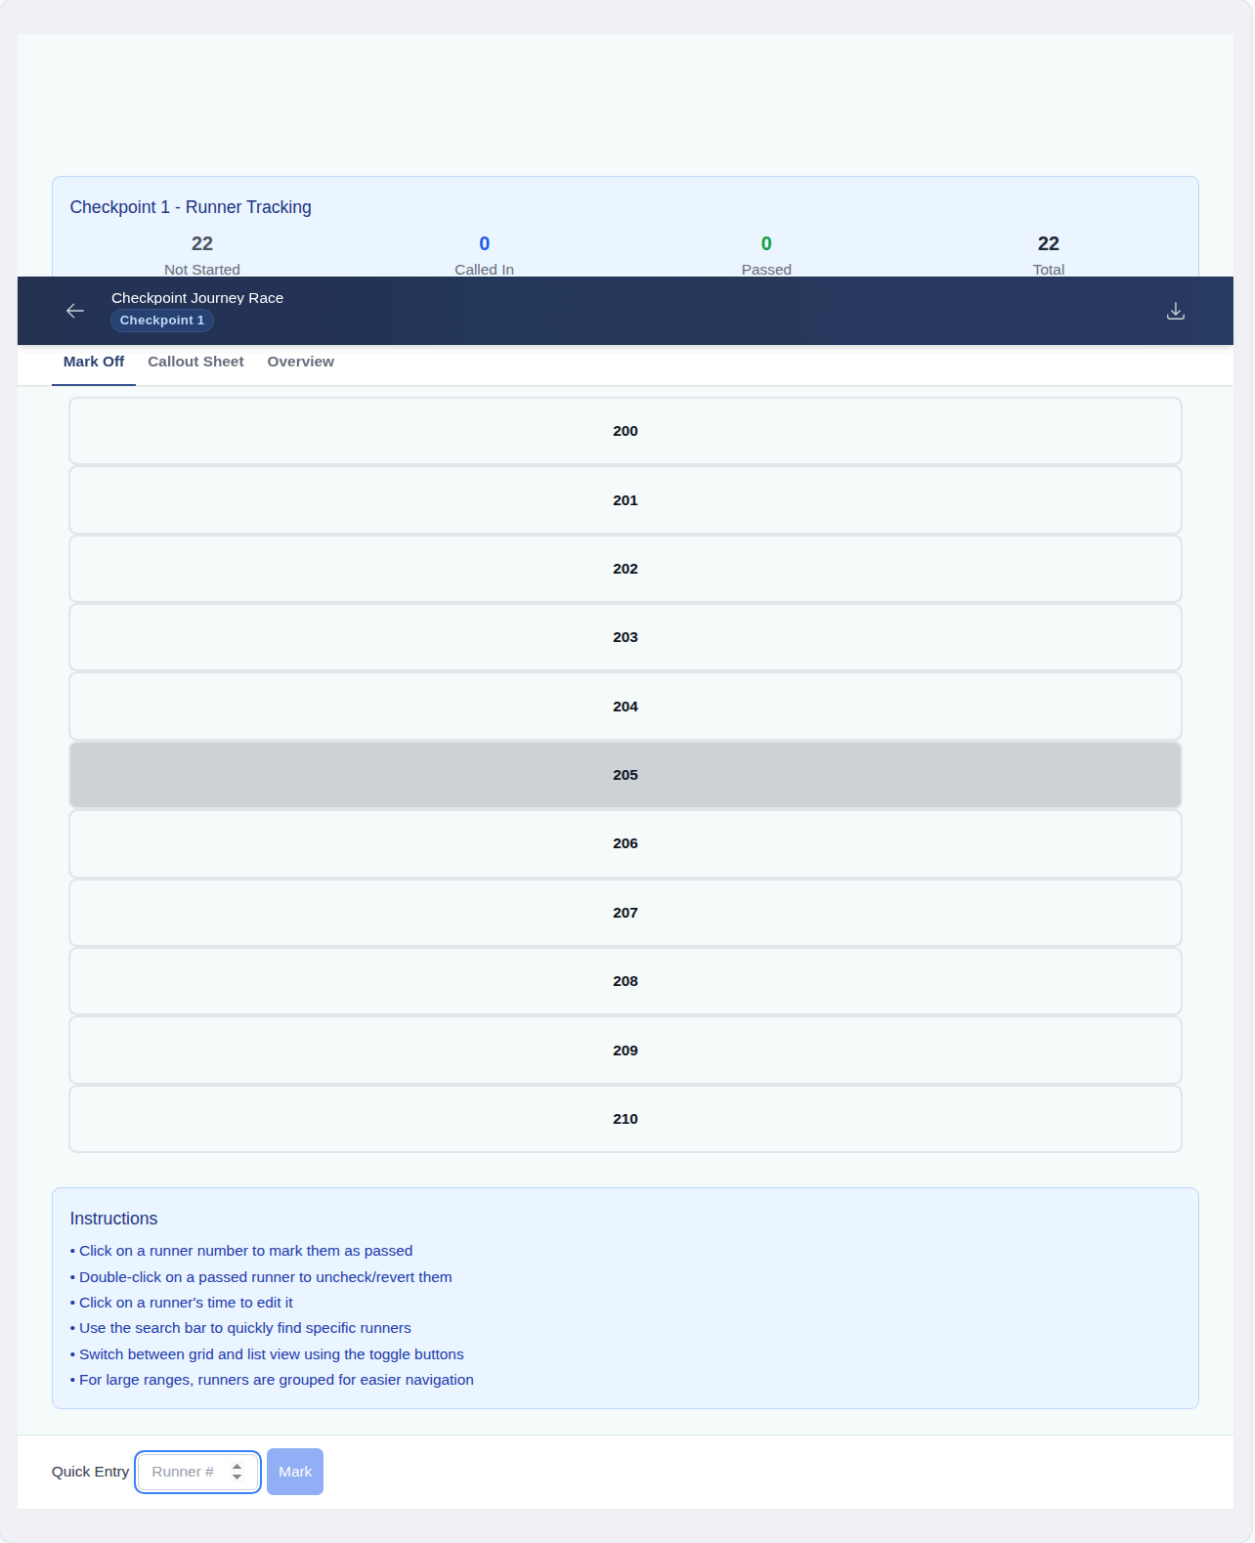
⚠ Screenshot data not found for test: "navigates to checkpoint and sees runner grid" — run `make test-e2e` first.

2 Mark Off Runners

marks off a single runner via the runner grid

A checkpoint volunteer clicks on a single runner's bib number tile in the grid to record that the runner passed through. The tile should change colour or appearance to make it obvious that runner has been marked as "through".

Checkpoint view — runner grid visible

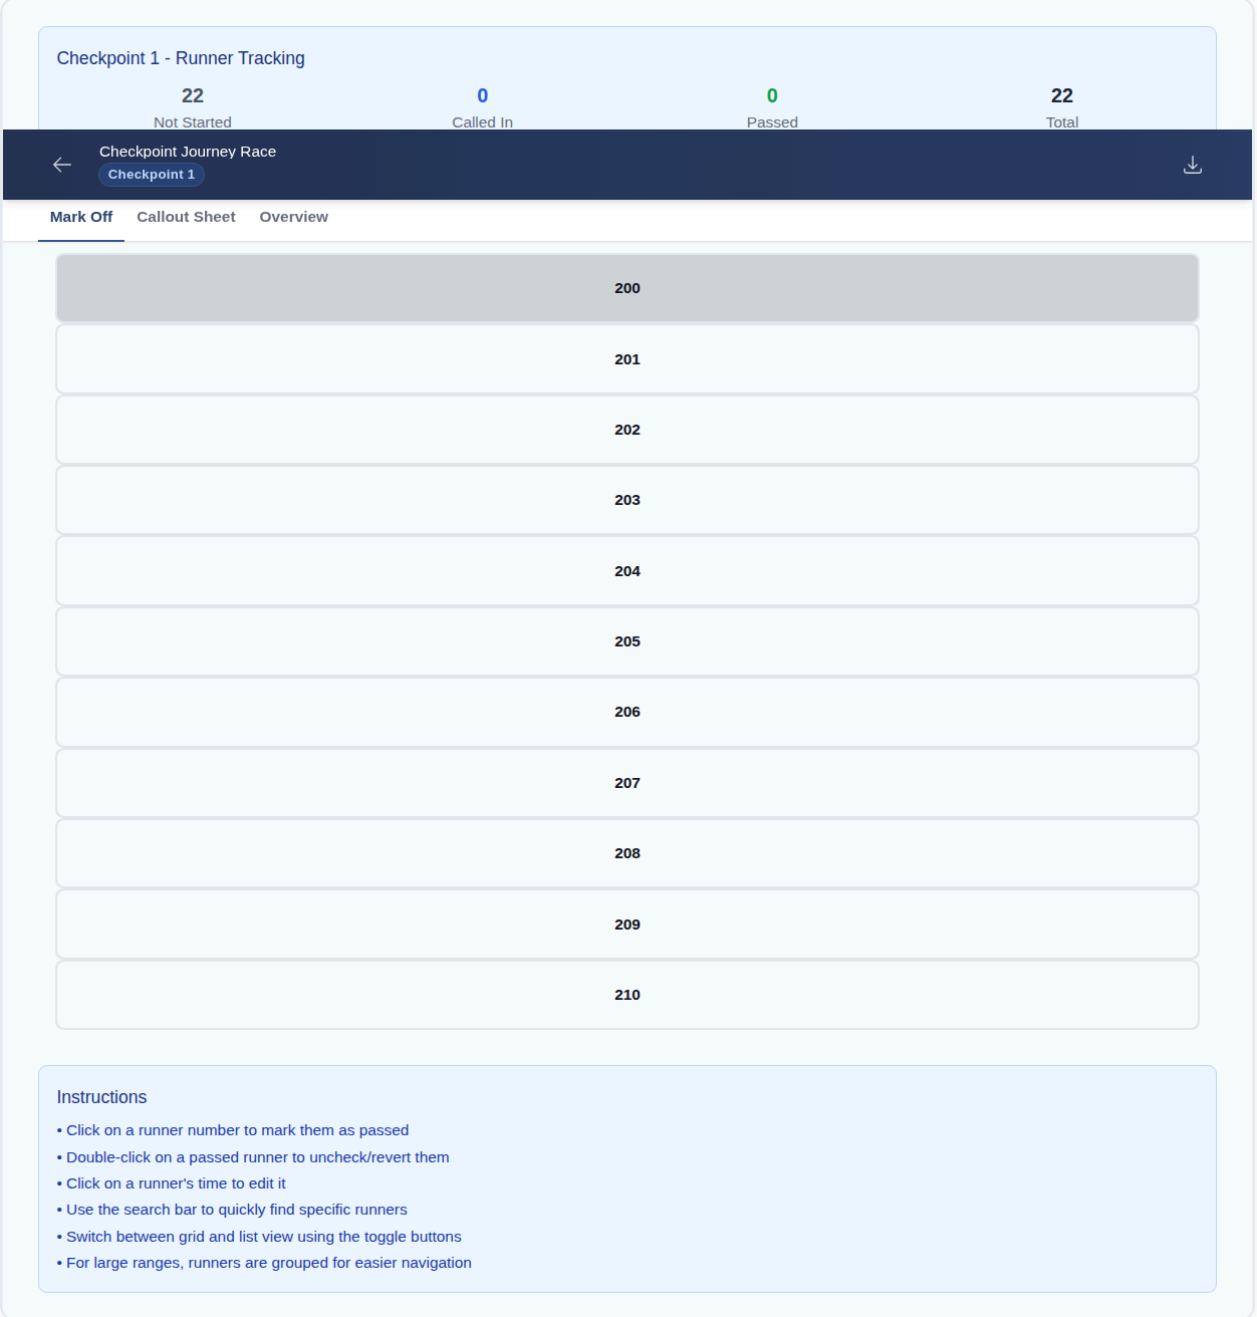


OBSERVE

WHERE: The grid of bib number tiles

WHY: *Each tile represents one runner. Tiles are white (not yet recorded) or coloured (marked off). Find the runner you need to mark.*

Runner grid — tap first runner tile (200s range)

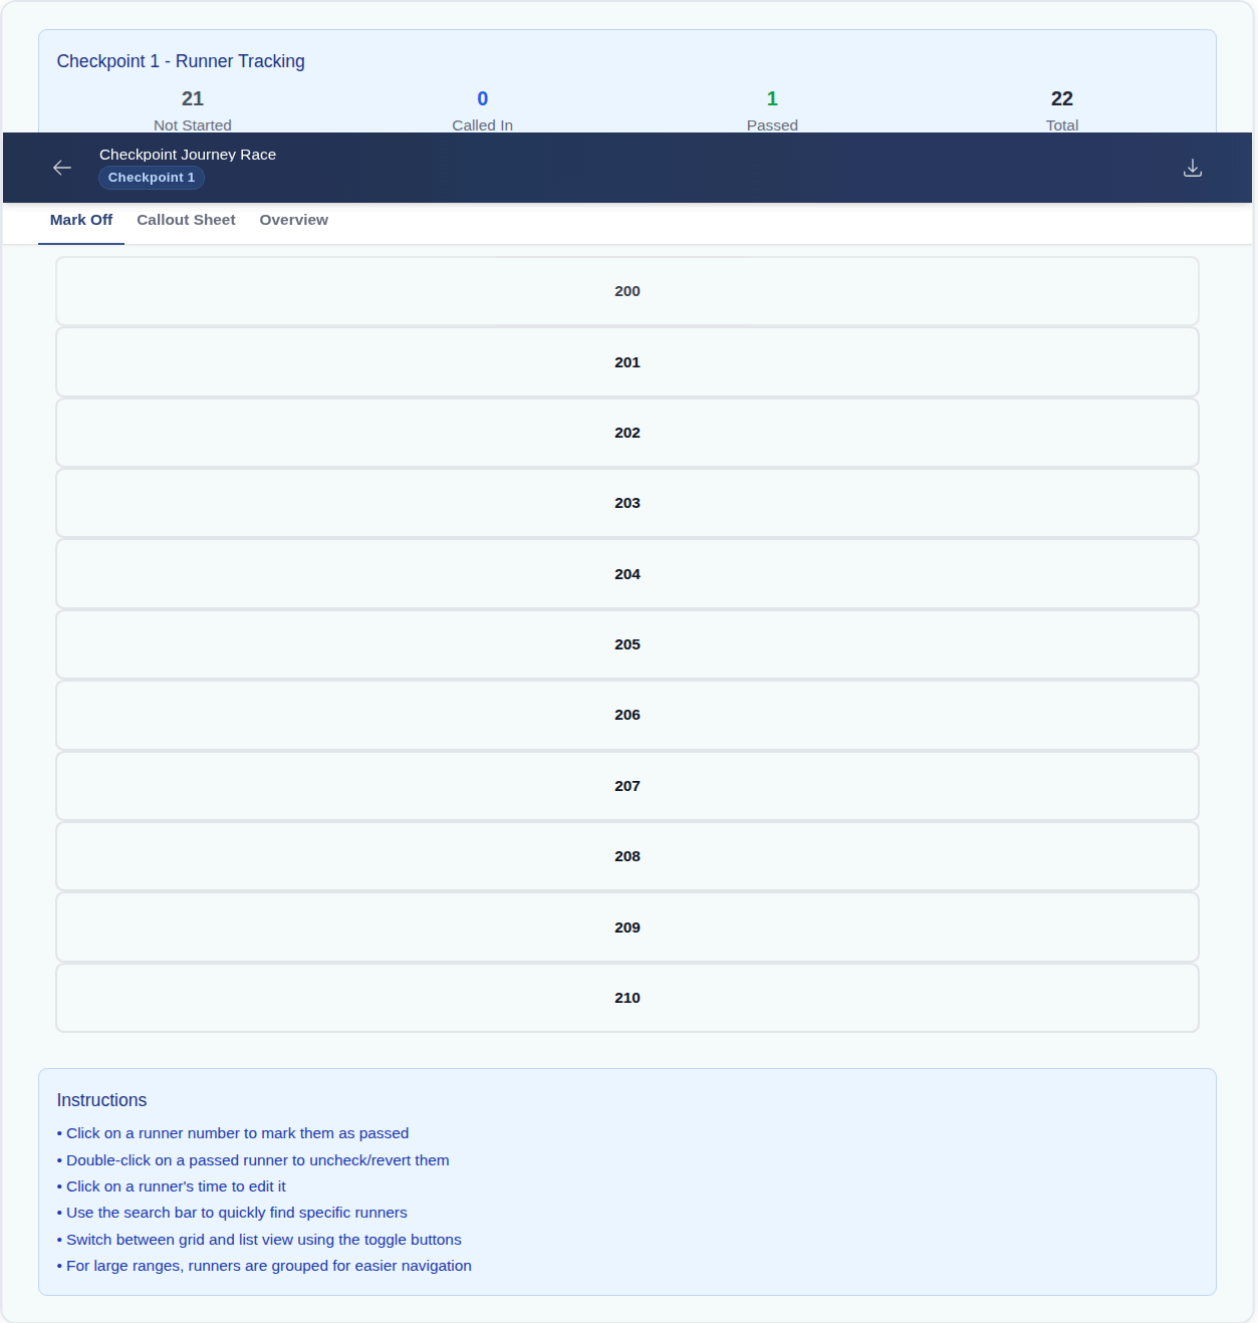


CLICK

WHERE: The bib number tile for the runner who just passed (e.g. tile "200")

WHY: *A single tap marks the runner as "Passed" and records the current time automatically. The tile colour changes to confirm the mark.*

Runner tile — marked state applied



OBSERVE

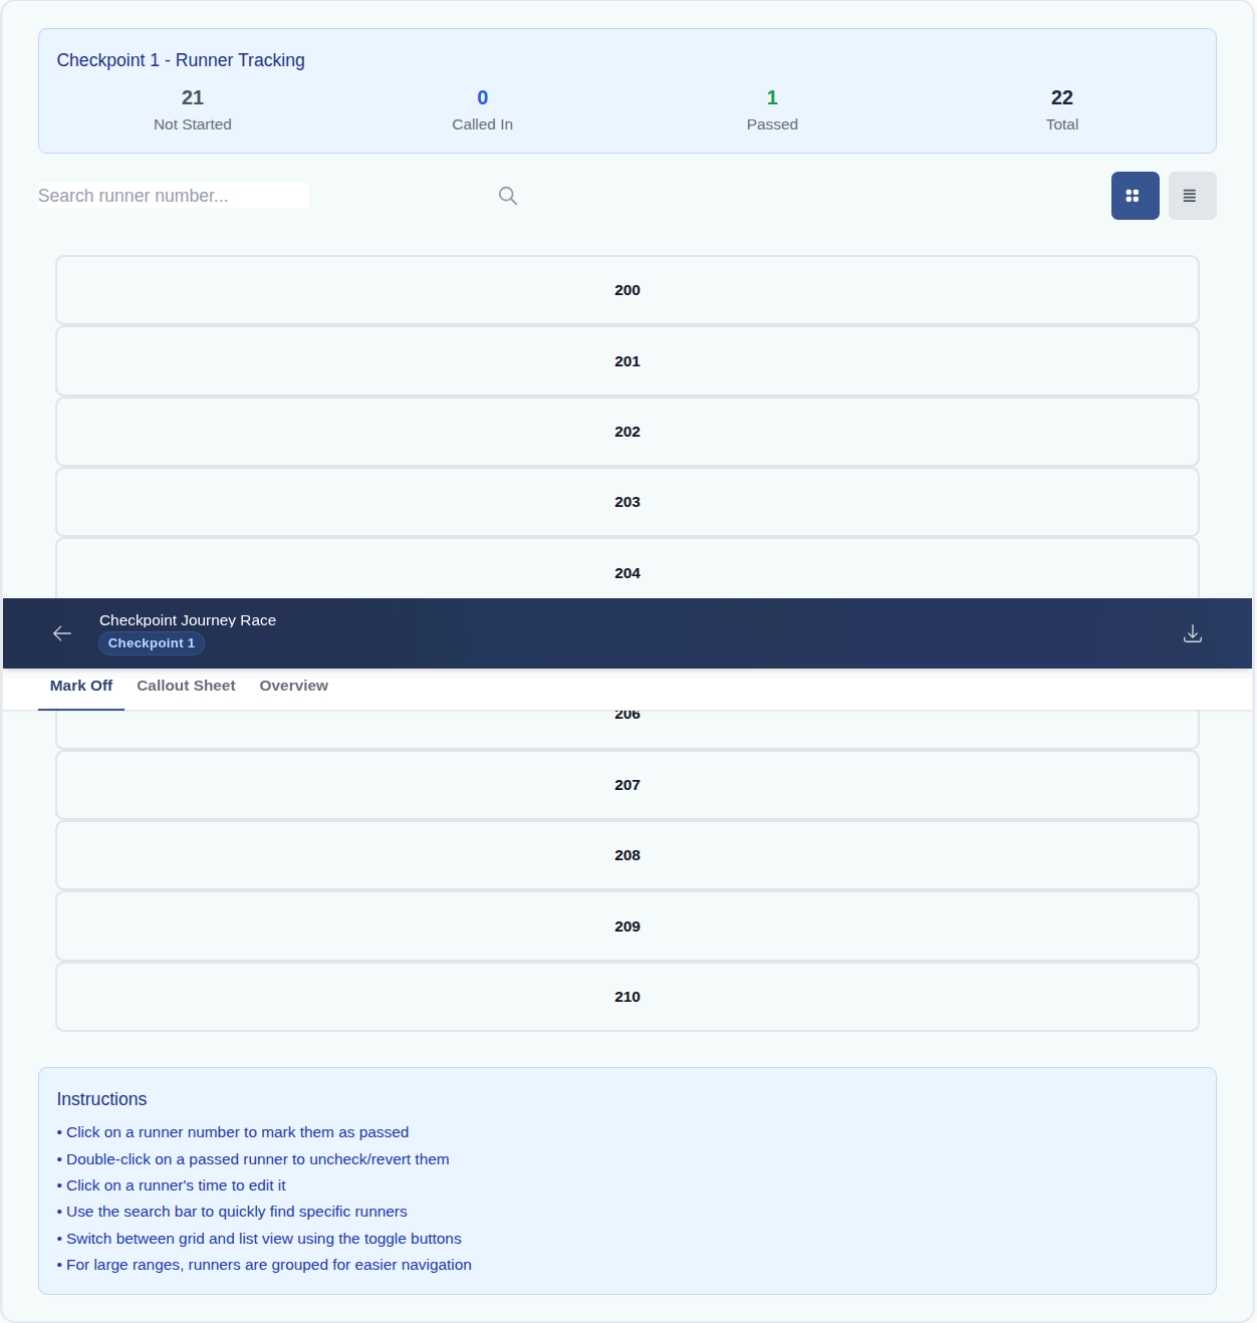
WHERE: The tile for the marked runner and the "Passed" counter in the stats bar

WHY: *The tile should now appear highlighted/coloured and the Passed count should increase by 1. Double-tap a tile to undo a mark if you made an error.*

marks off multiple runners via Quick Entry

Instead of finding runners in the grid, a volunteer can just type a bib number and press Enter to record it quickly. This test enters two bib numbers one after the other using the quick-entry shortcut and confirms both runners are marked off.

Quick Entry — type first bib number and press Enter



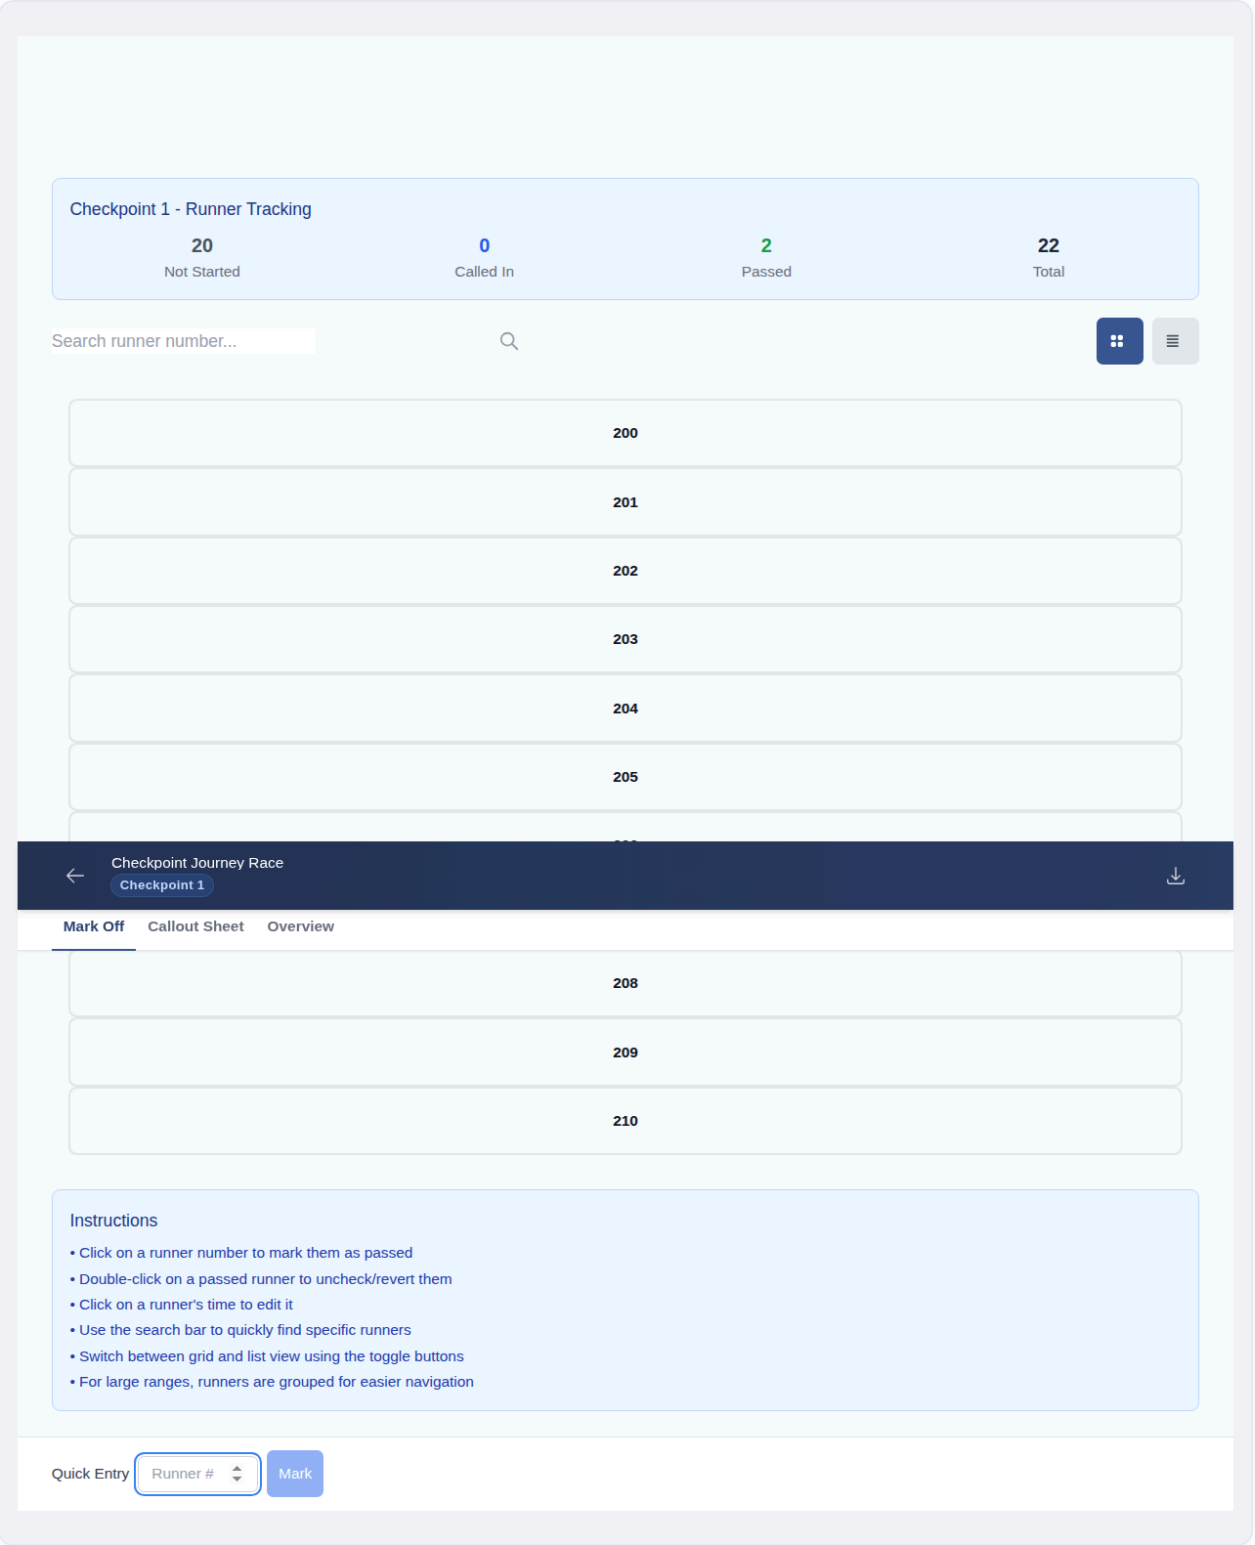
⌨ **TYPE + ENTER**

WHERE: The search bar at the top of the screen

ENTER: `Type the bib number (e.g. 201), then press Enter`

WHY: *Pressing Enter immediately marks the runner and clears the field, so you can type the next number without lifting your eyes from the paper list.*

Quick Entry — type second bib number and press Enter



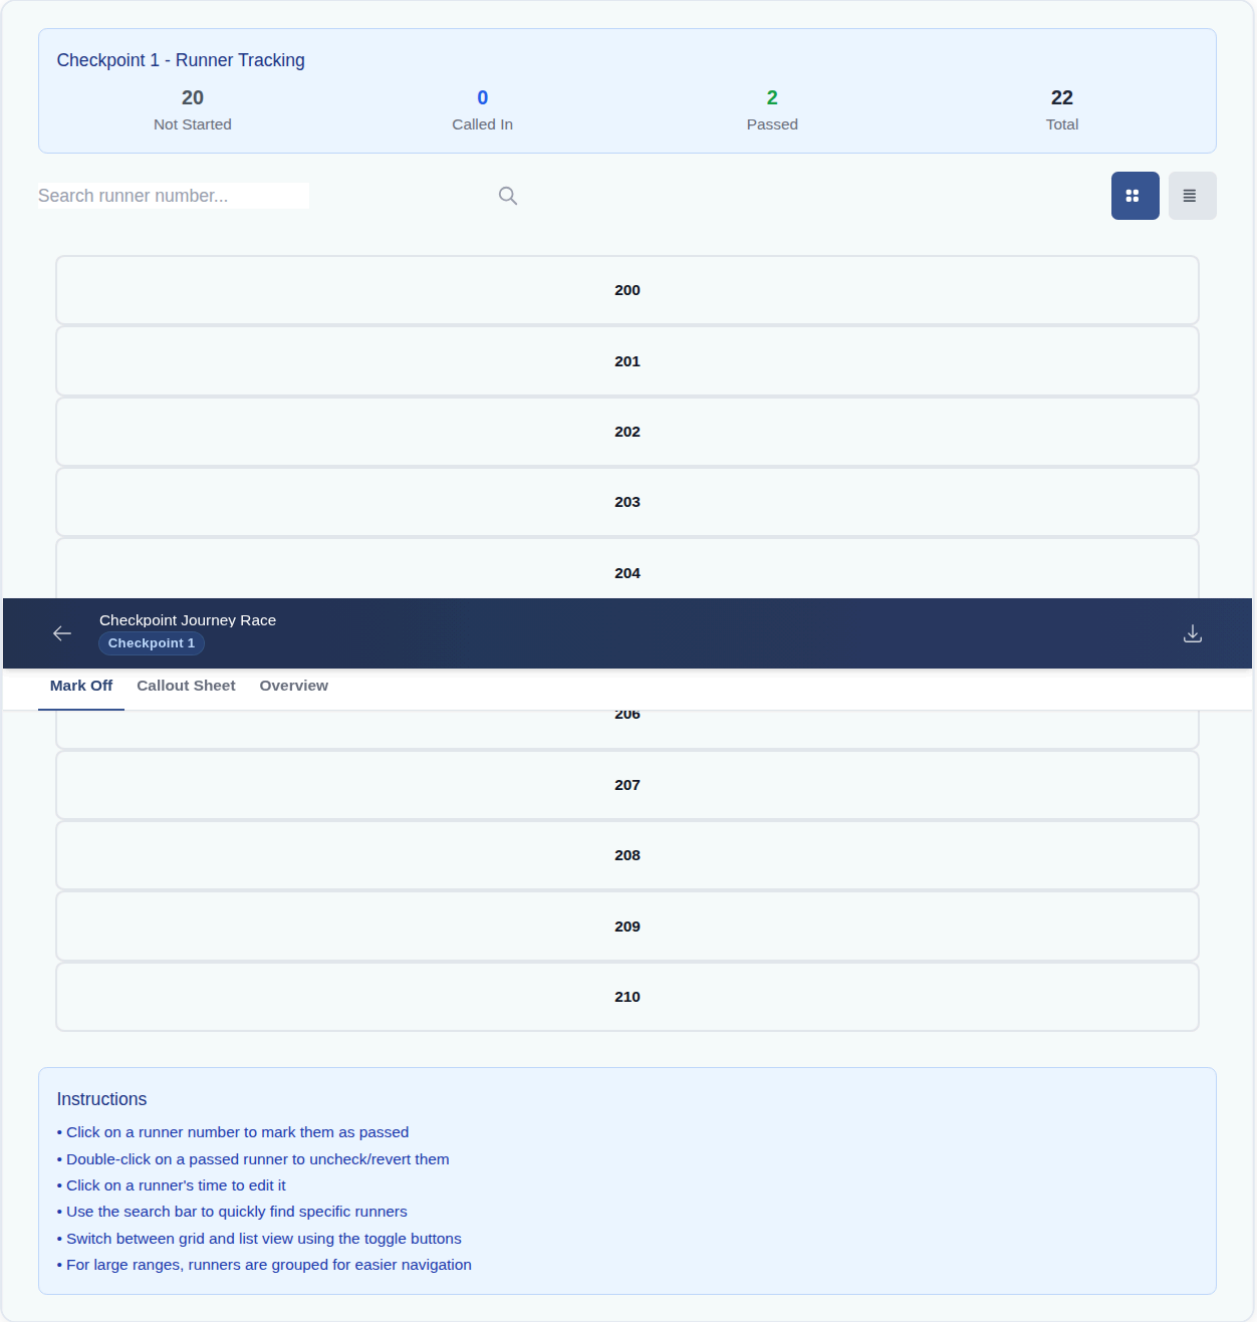
TYPE + ENTER

WHERE: The search bar (still focused after the first entry)

ENTER: `Type the next bib number (e.g. 202), then press Enter`

WHY: *You can mark as many runners as needed in rapid succession — just keep typing numbers and pressing Enter.*

Runner grid — both runners marked off



OBSERVE

WHERE: The tiles for the runners you just entered and the updated "Passed" counter

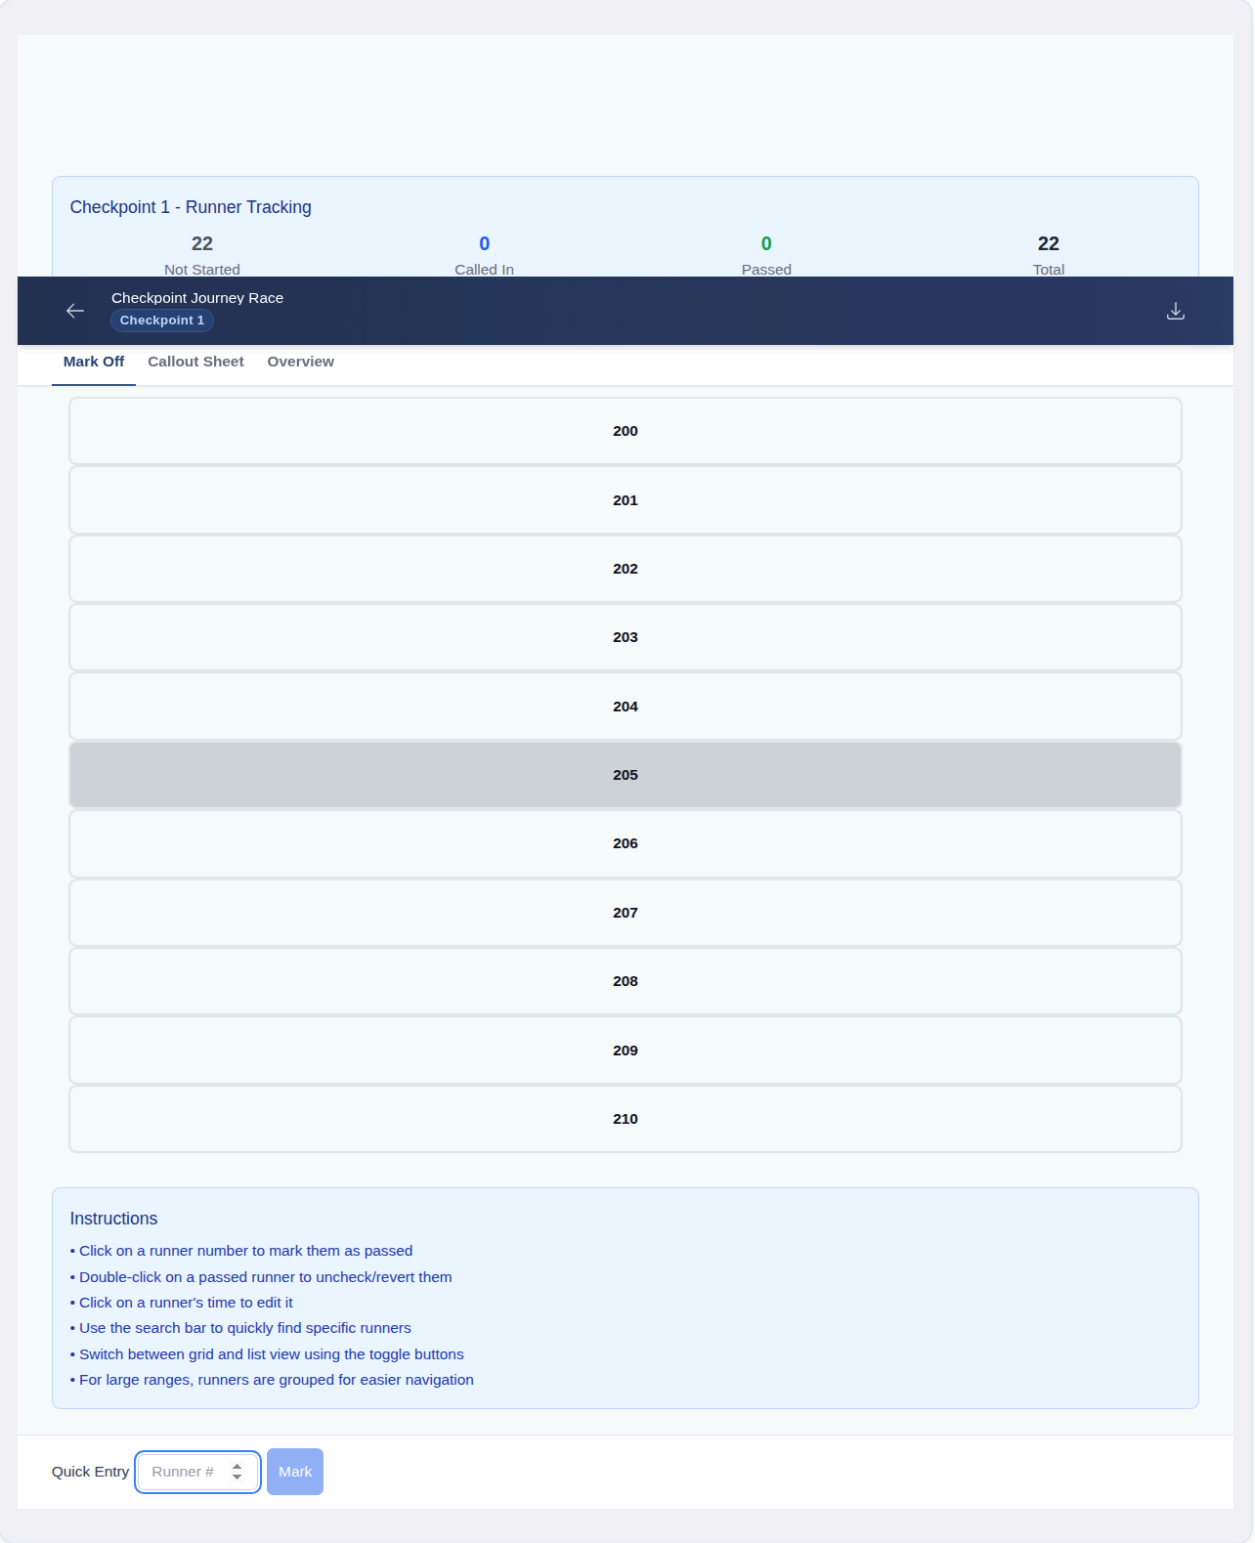
WHY: *Both tiles should now be highlighted. The Passed counter should have increased by 2.*

3 Call Out Missing Runners

switches to Callout Sheet tab

The Callout Sheet tab shows the list of runners who have not yet been recorded at this checkpoint. Volunteers read these numbers out over the radio to base station. This test checks the tab loads correctly and the list is visible.

Checkpoint view — Mark Off tab active

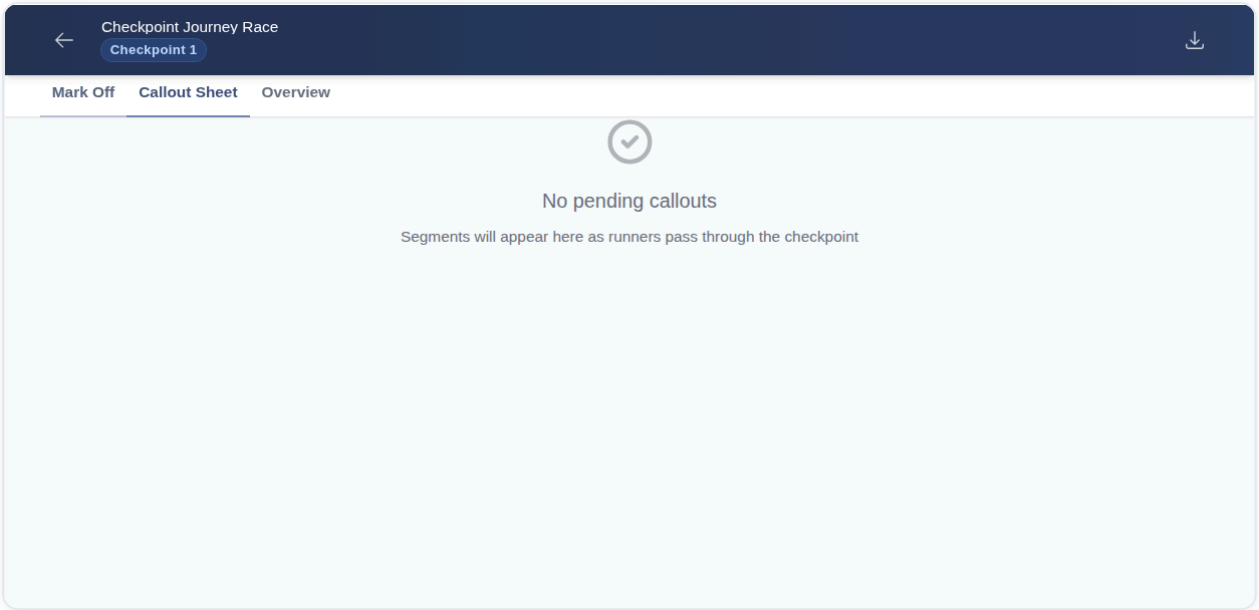


OBSERVE

WHERE: The three tabs: Mark Off | Callout Sheet | Overview

WHY: *The default view is Mark Off. When you need to read out missing runners to base station, switch to the Callout Sheet tab.*

Callout Sheet tab — tap to switch

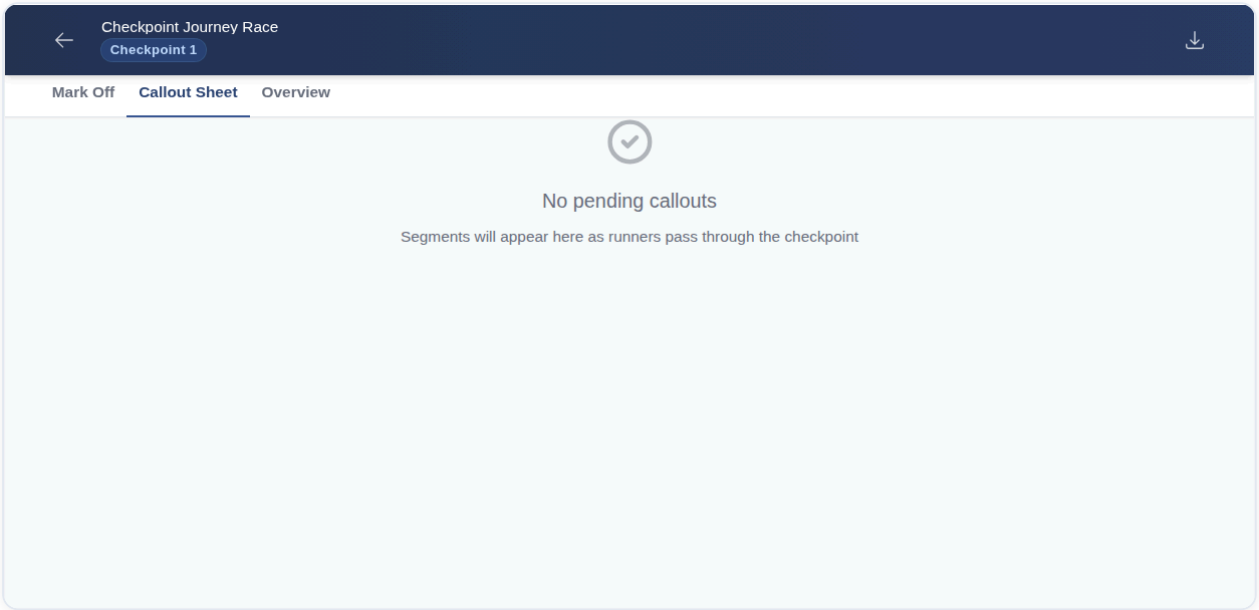


CLICK

WHERE: "Callout Sheet" tab in the navigation bar

WHY: *The Callout Sheet lists every runner who has NOT yet been recorded at this checkpoint — these are the numbers to read over the radio.*

Callout Sheet — unrecorded runners listed



OBSERVE

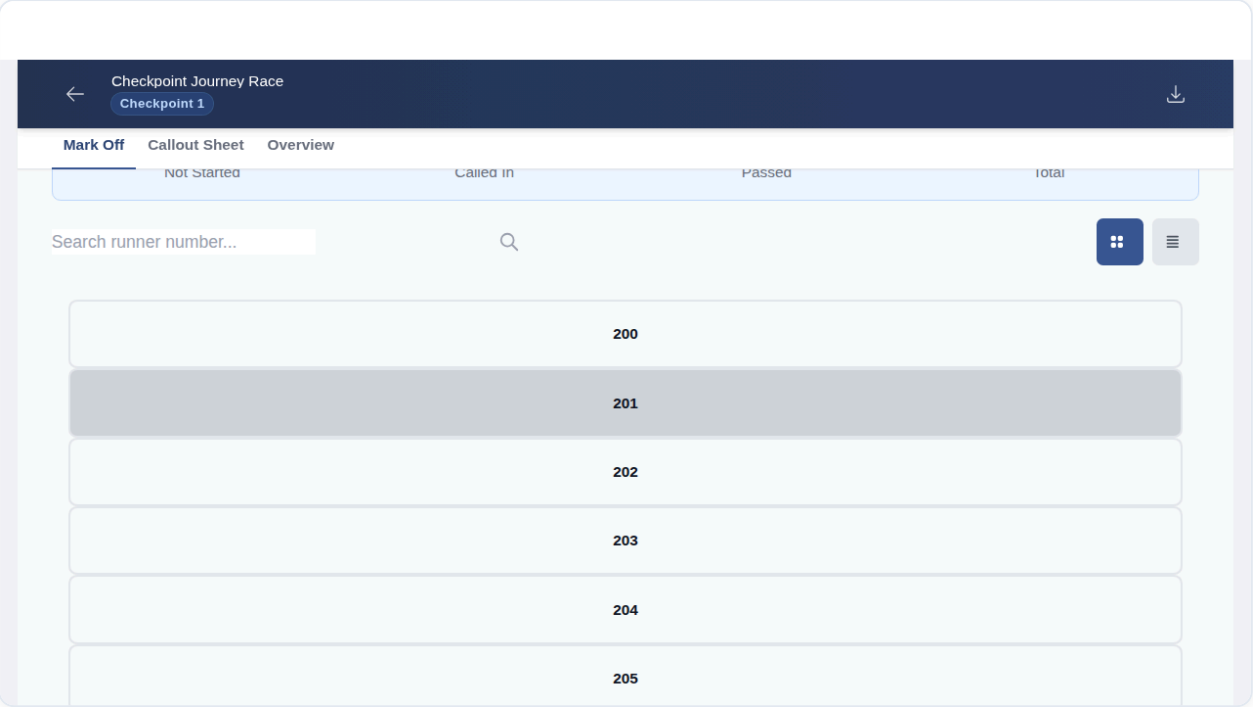
WHERE: The list of outstanding runner bib numbers

WHY: *Read these numbers out to base station so they can flag missing runners. The list updates in real time as you mark off more runners on the Mark Off tab.*

switches to Overview tab and shows runner counts

The Overview tab shows a summary — how many runners have been through, how many are still expected, and other totals. This test confirms those summary numbers appear correctly when the tab is selected.

Checkpoint view — navigate to checkpoint

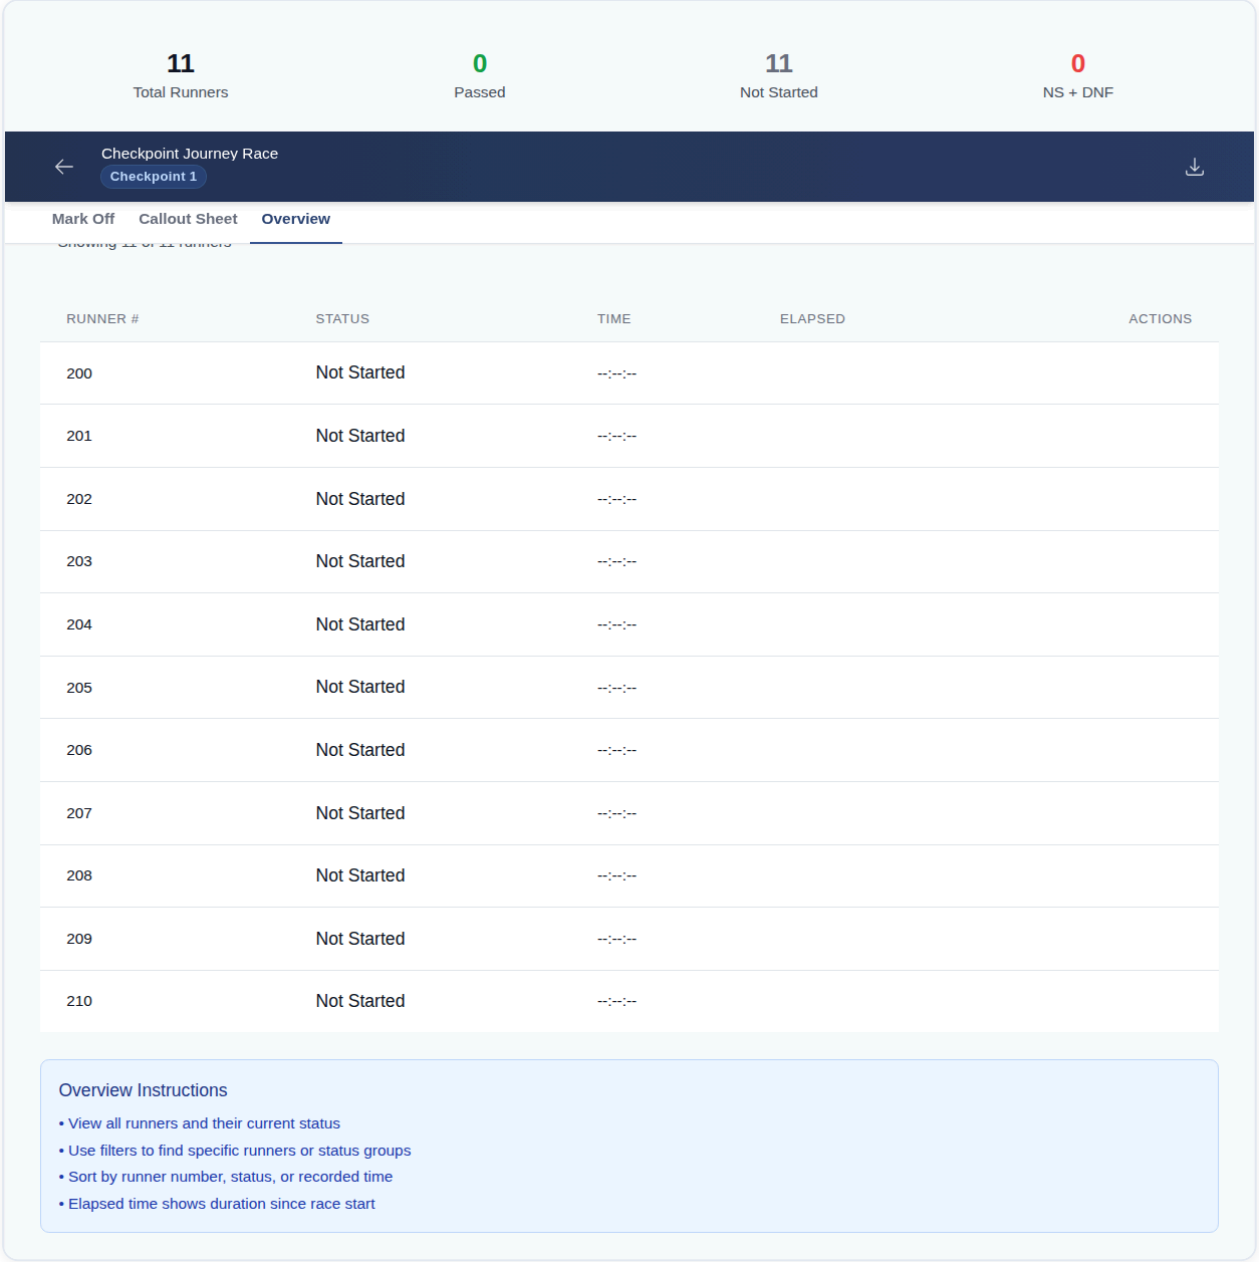


OBSERVE

WHERE: The checkpoint screen header showing the race and checkpoint name

WHY: *Confirm you are on the right checkpoint before reading summary figures.*

Overview tab — tap to switch



CLICK

WHERE: "Overview" tab in the navigation bar

WHY: *The Overview tab shows totals — how many runners have passed, how many are still outstanding, and any DNFs or non-starters recorded at this point.*

Overview — runner count summary visible

11	0	11	0
Total Runners	Passed	Not Started	NS + DNF

Checkpoint Journey Race

Checkpoint 1

Mark Off | Callout Sheet | Overview

Showing 11 of 11 runners

RUNNER #	STATUS	TIME	ELAPSED	ACTIONS
200	Not Started	--:--:--		
201	Not Started	--:--:--		
202	Not Started	--:--:--		
203	Not Started	--:--:--		
204	Not Started	--:--:--		
205	Not Started	--:--:--		
206	Not Started	--:--:--		
207	Not Started	--:--:--		
208	Not Started	--:--:--		
209	Not Started	--:--:--		
210	Not Started	--:--:--		

Overview Instructions

- View all runners and their current status
- Use filters to find specific runners or status groups
- Sort by runner number, status, or recorded time
- Elapsed time shows duration since race start

OBSERVE

WHERE: The summary statistics (Passed, Not Started, Total)

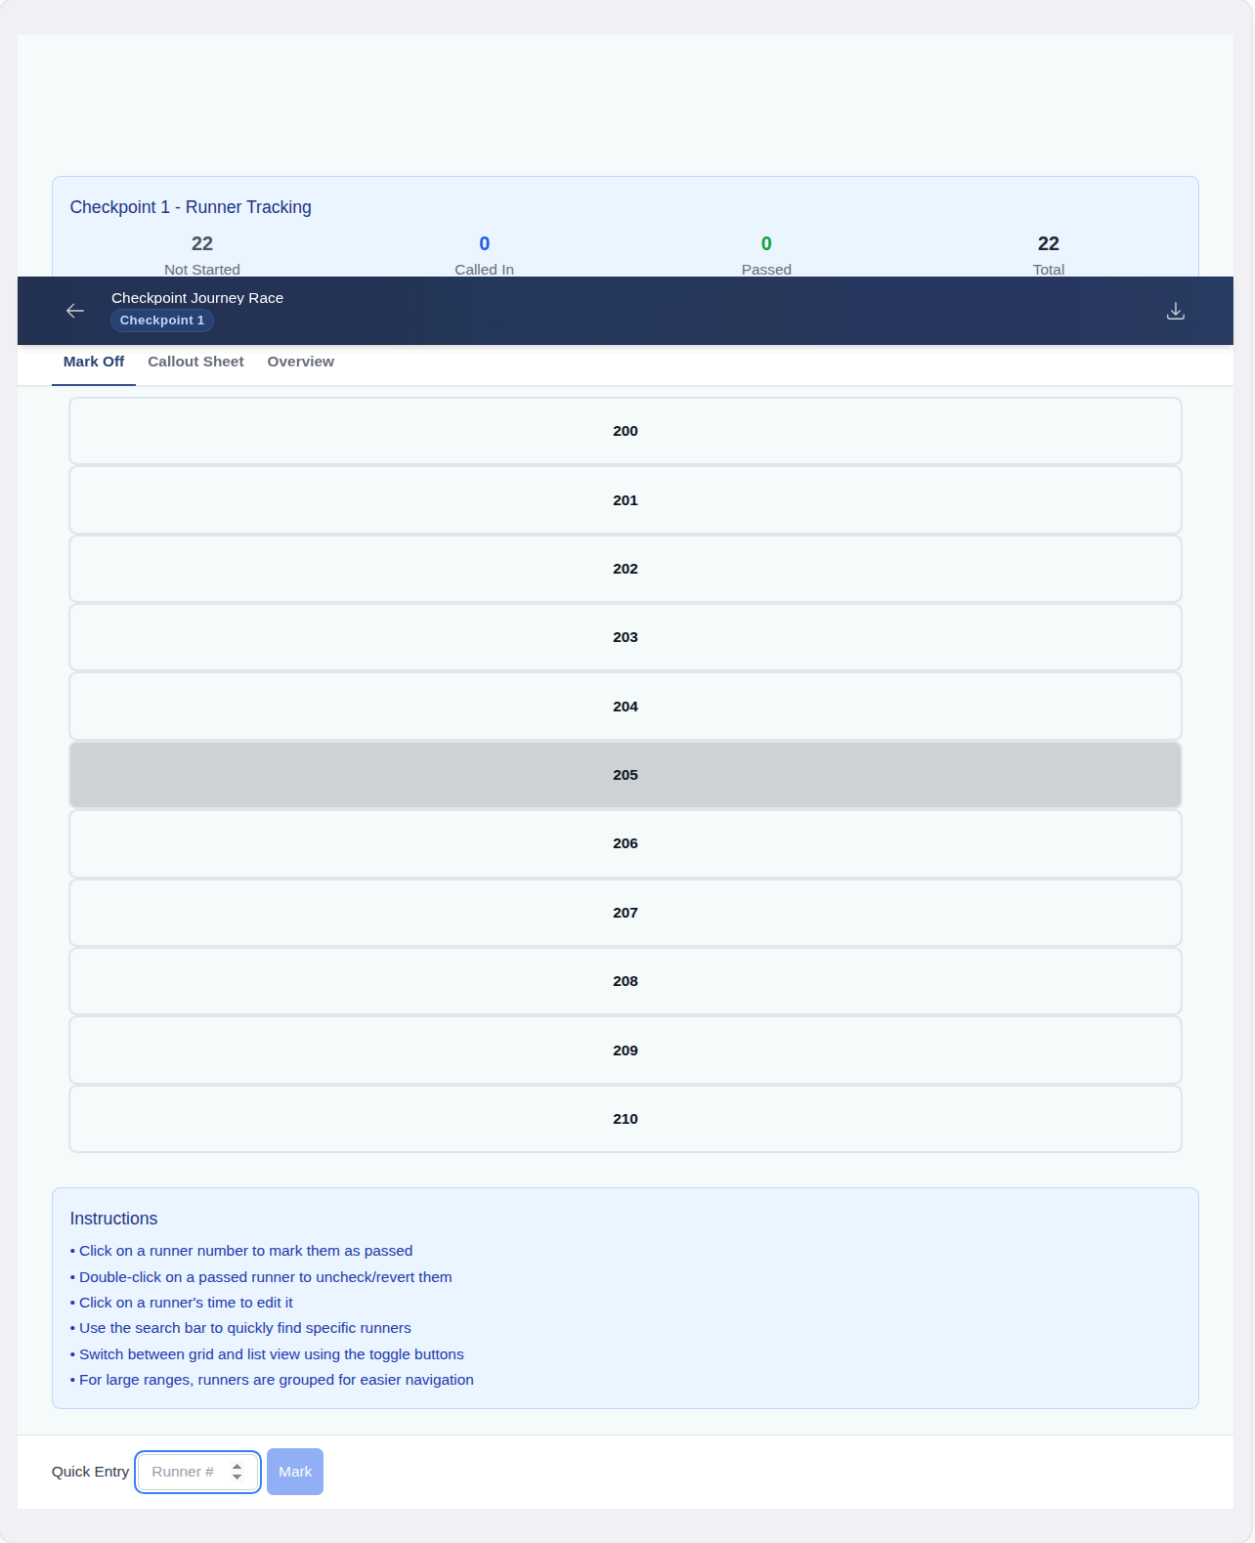
WHY: *Use these totals to confirm your call-out numbers before radioing base station. If Passed + Not Started does not equal Total, a record may be missing.*

4 Export Results

can export checkpoint results

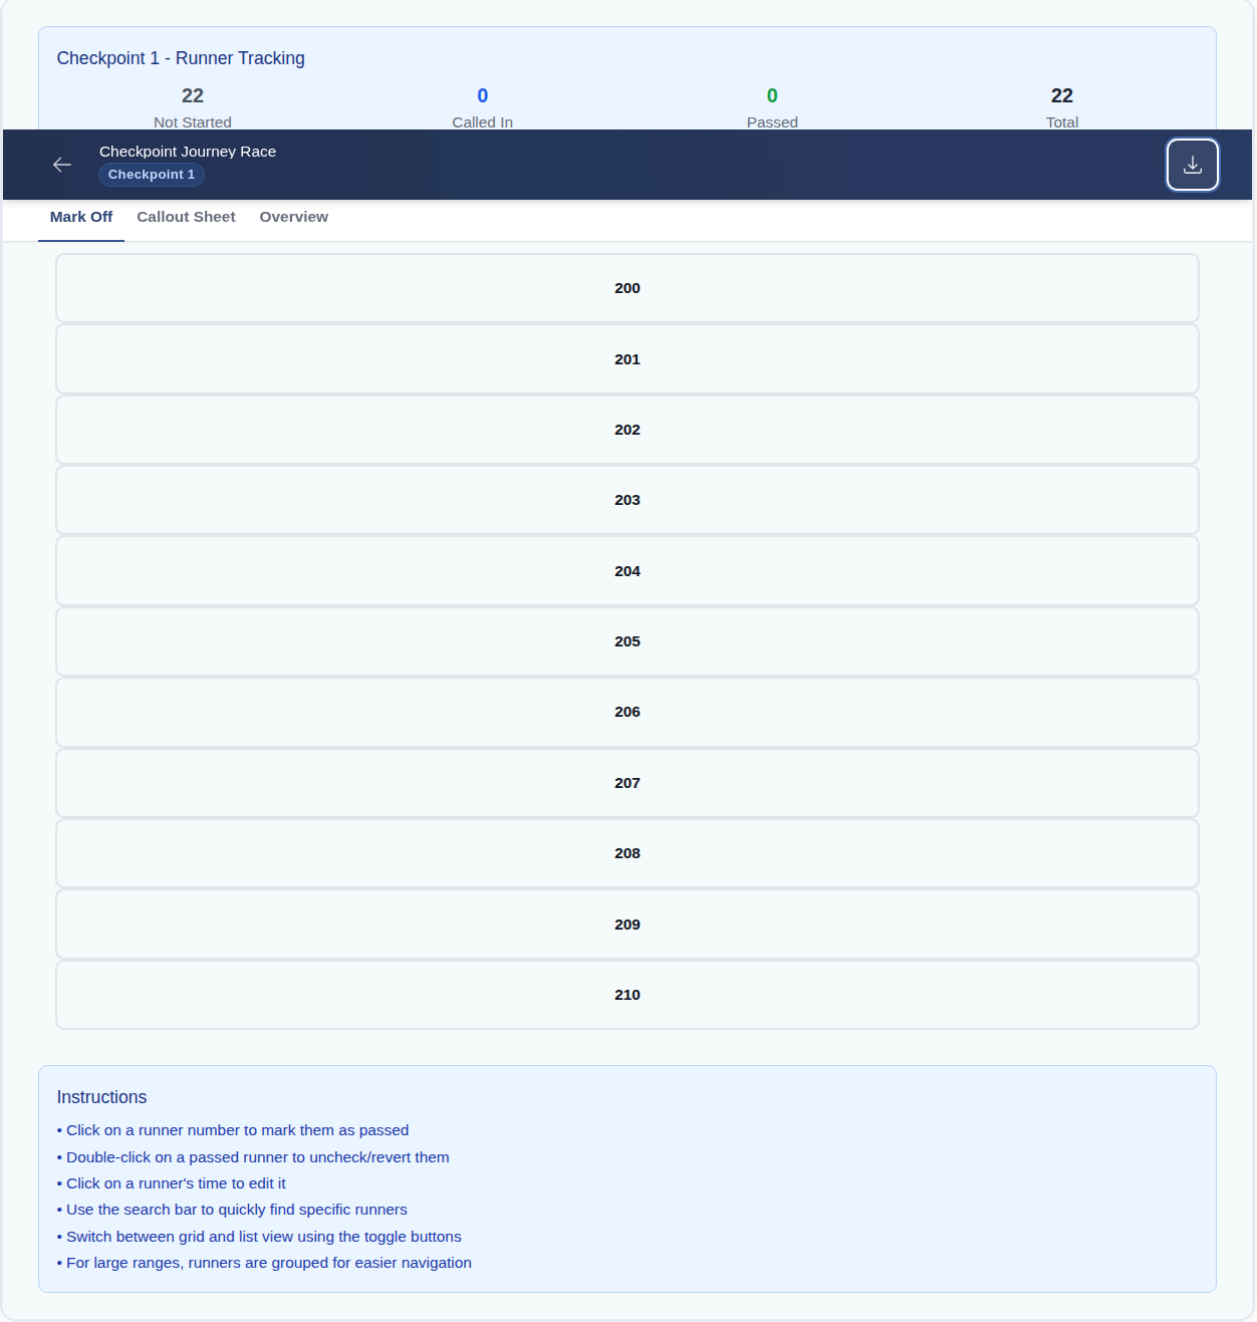
At the end of a checkpoint shift, a volunteer may need to export their recorded data to share with base station or keep as a backup. This test checks that the export option can be opened from the checkpoint screen.

Checkpoint view — navigate to checkpoint



OBSERVE

WHERE: The checkpoint screen

WHY: *Make sure all runners have been recorded before exporting — exports capture the current state.*


Export option — triggers JSON download
