Settings

Personalise the app. Toggle dark mode and understand how preferences are saved.

Opens and closes the Settings modal

Tapping the settings cog in the top-right corner should open the settings panel. Pressing the Escape key (or tapping close) should dismiss it cleanly. This test confirms both actions work.

Home — tap Settings cog button (aria-label Settings)

Home — tap Settings cog button (aria-label Settings)

Settings modal — panel open with customisation options

Settings modal — closed after pressing X button

Settings modal — closed after pressing X button

Toggles dark mode on and off

The dark mode toggle in settings switches the app between a light colour scheme and a dark one. This test turns dark mode on, confirms the dark theme is applied, then turns it back off and confirms the light theme is restored.

Home — open Settings modal

Dark mode OFF — "dark" class removed from html element

![Dark mode OFF — "dark" class removed from html element]

Settings persist after closing and reopening the modal

Changes made in settings should be saved and remembered. If dark mode is turned on and the settings panel is closed then reopened, dark mode should still be on — the preference should not reset.
