⚡ RaceTracker Pro — User Guide

Setting Up a Race

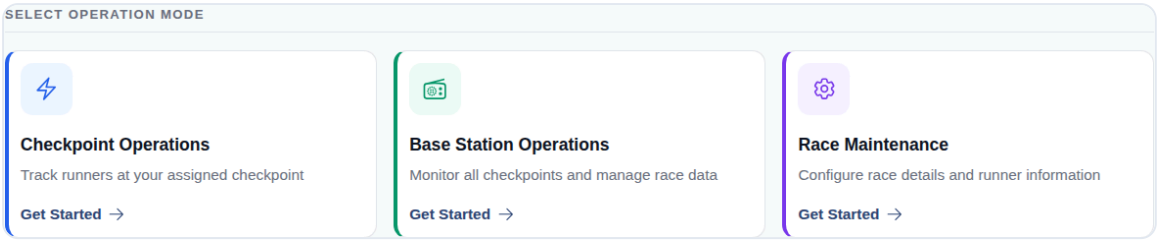
Setting Up a Race

Use these steps to create and manage races. This section covers the full setup wizard, runner ranges, checkpoints, waves, and the race overview.

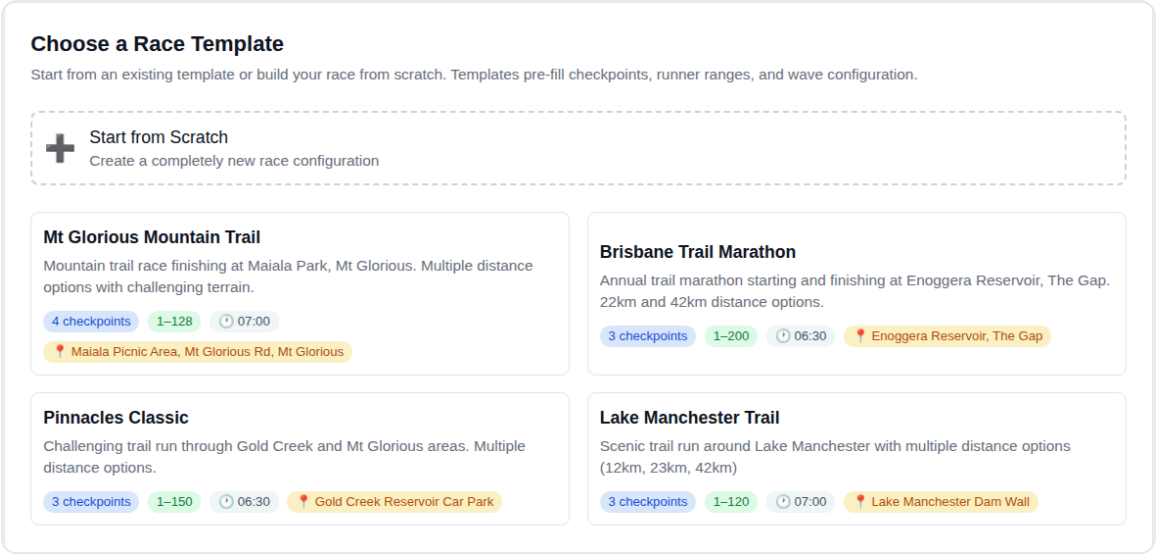
Creates a new race from scratch and verifies the overview

A race director fills in all the details needed to create a brand-new race — the race name, date, start time, how many checkpoints there are, and the range of runner bib numbers. Once saved, the race overview page should correctly display the race name, list every checkpoint, and show the right number of registered runners.

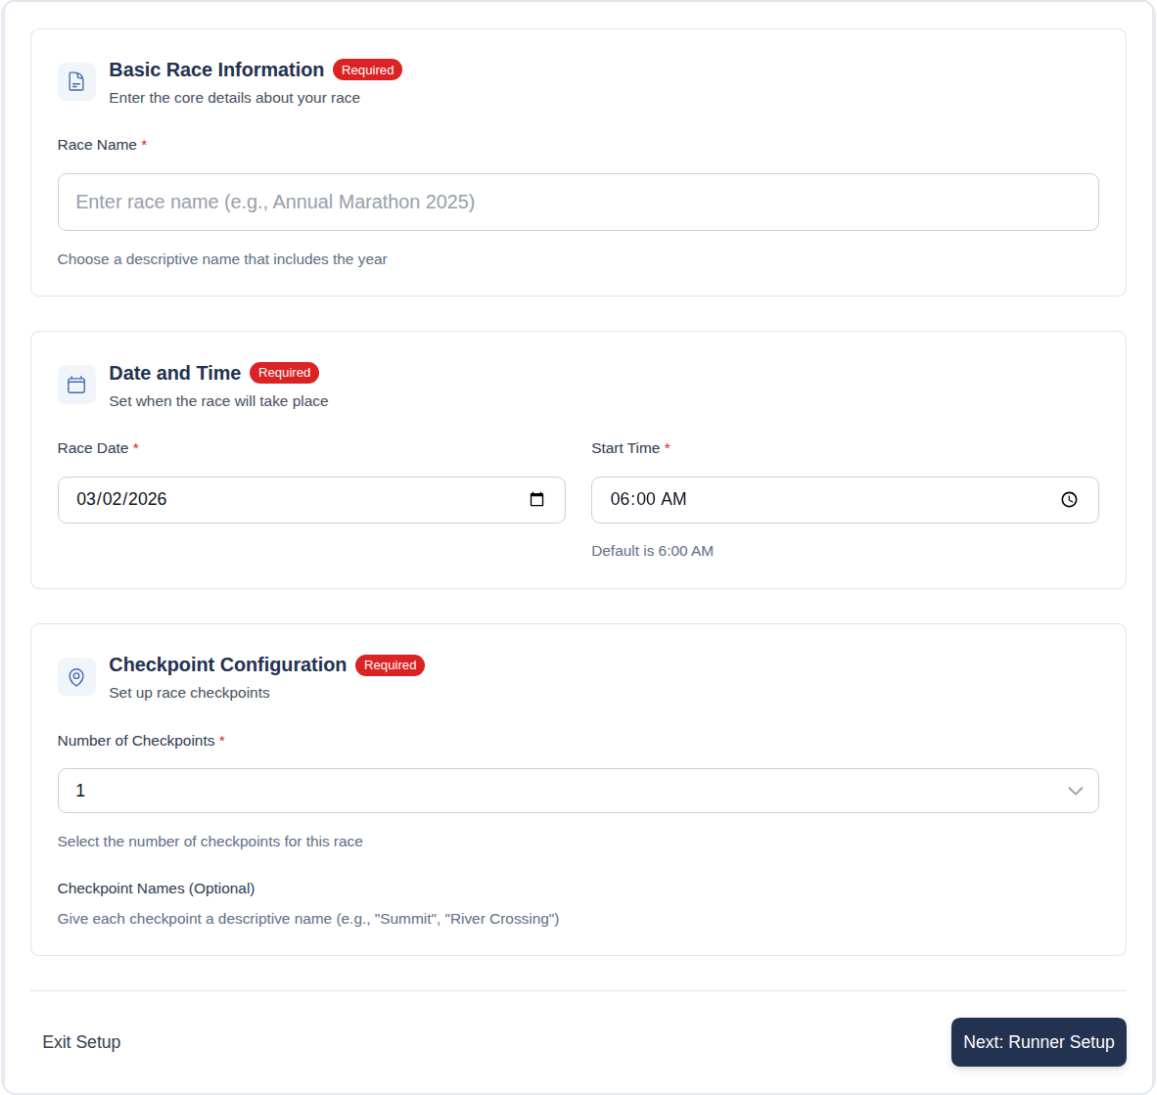
Home — Welcome Back screen with 3 module cards



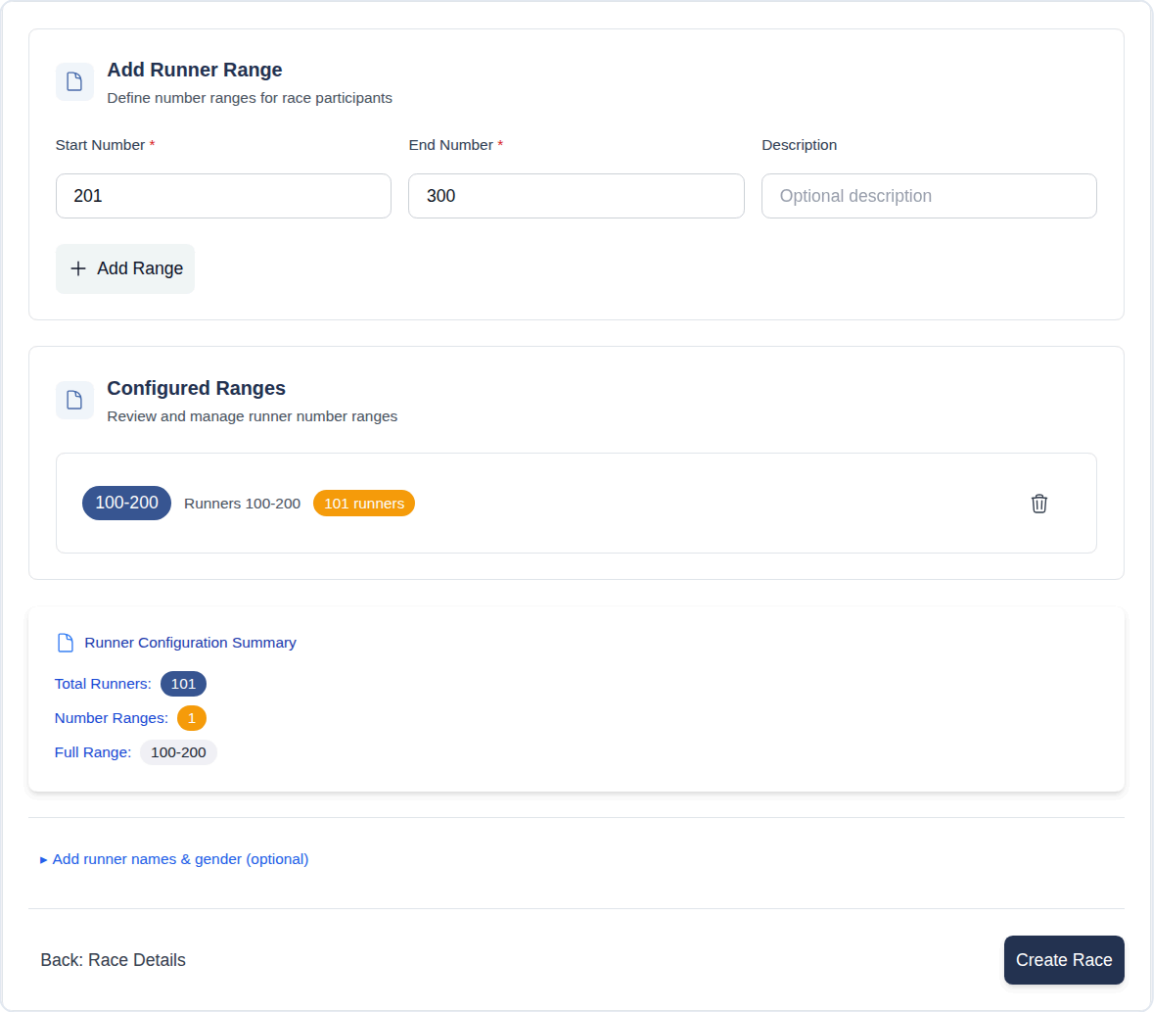
Race Maintenance → Create New Race — setup wizard opens



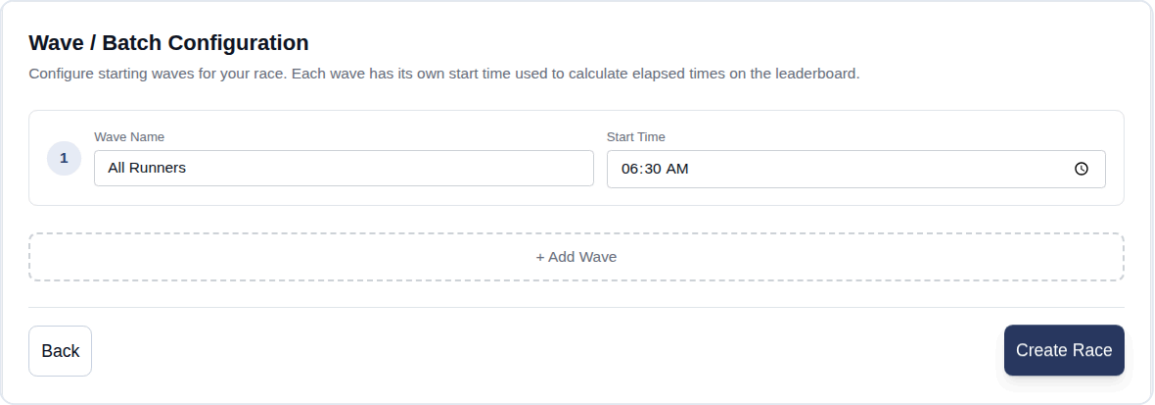
Step 1 of 4 — Template: choose Start from Scratch



Step 2 of 4 — Race Details: enter name, date, start time and checkpoints



Step 3 of 4 — Runner Setup: add bib number range 101–115



Step 4 of 4 — Waves: confirm wave and save race

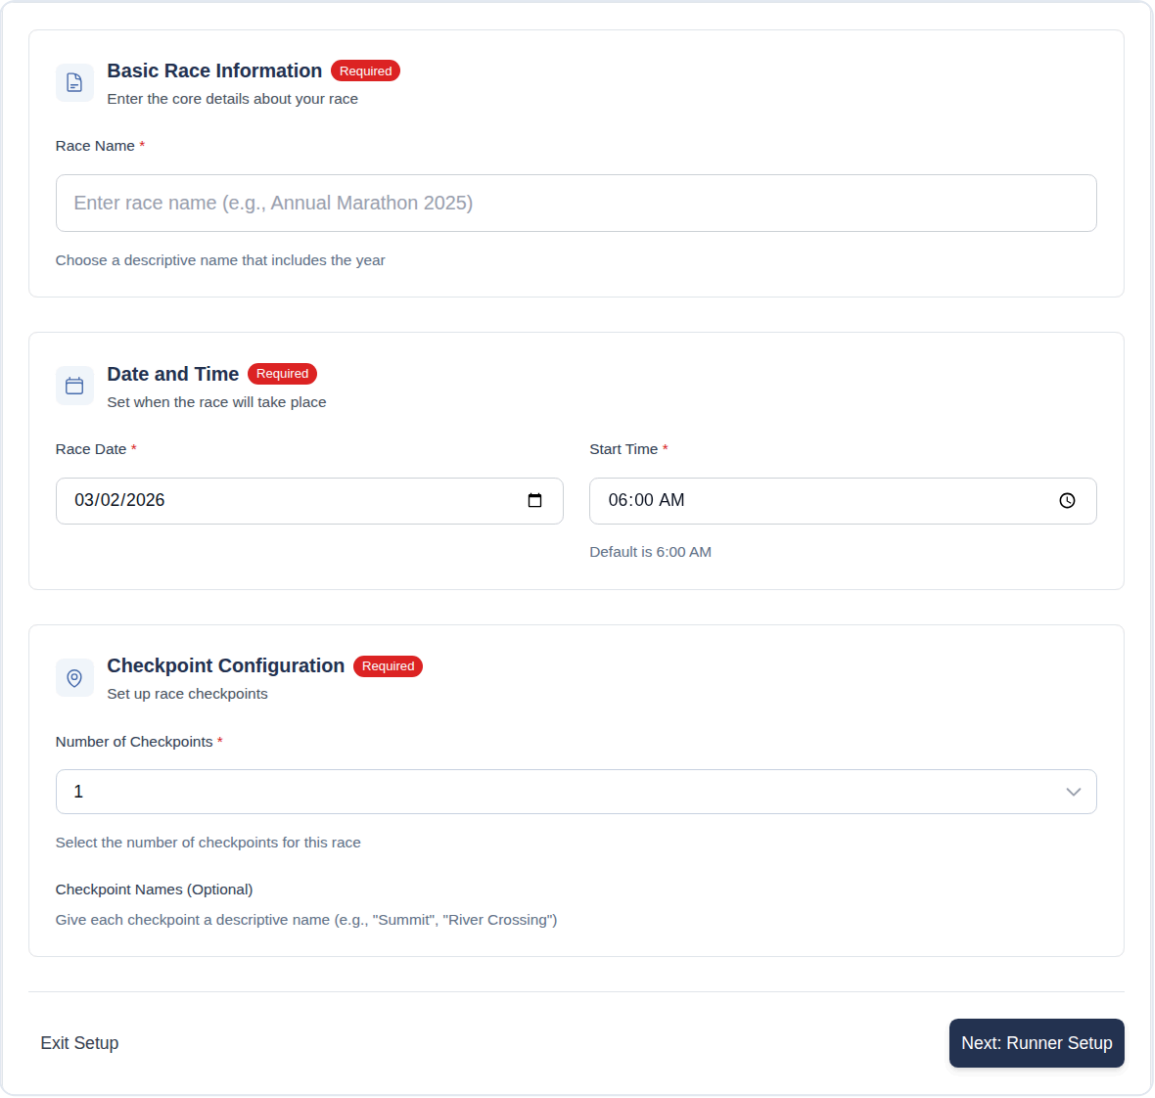
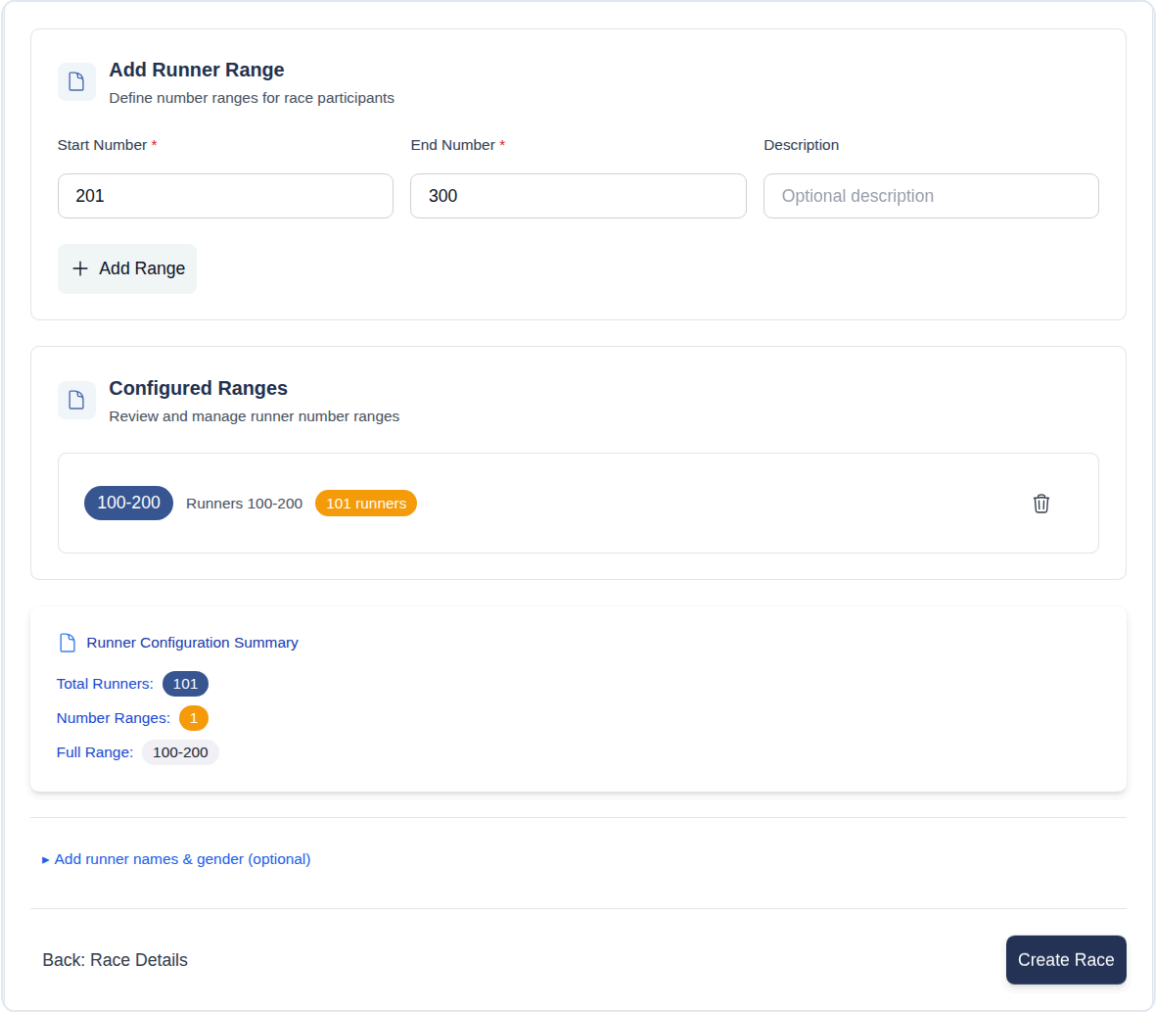
Step indicator advances correctly through setup wizard

The race creation wizard has four steps: Template, Race Details, Runner Setup, and Waves. This test checks that the progress indicator at the top updates as you advance through each step, so the race director always knows where they are in the setup process.

Step 1 of 4 — Template: setup wizard opens



Step 2 of 4 — Race Details: step indicator shows step 2



Step 3 of 4 — Runner Setup: step indicator advances to step 3

Add Runner Range

Configured Ranges

Review and manage runner number ranges

100-200 Runners 100-200 101 runners

Runner Configuration Summary

Total Runners: 101

Number Ranges: 1

Full Range: 100-200

▸ Add runner names & gender (optional)

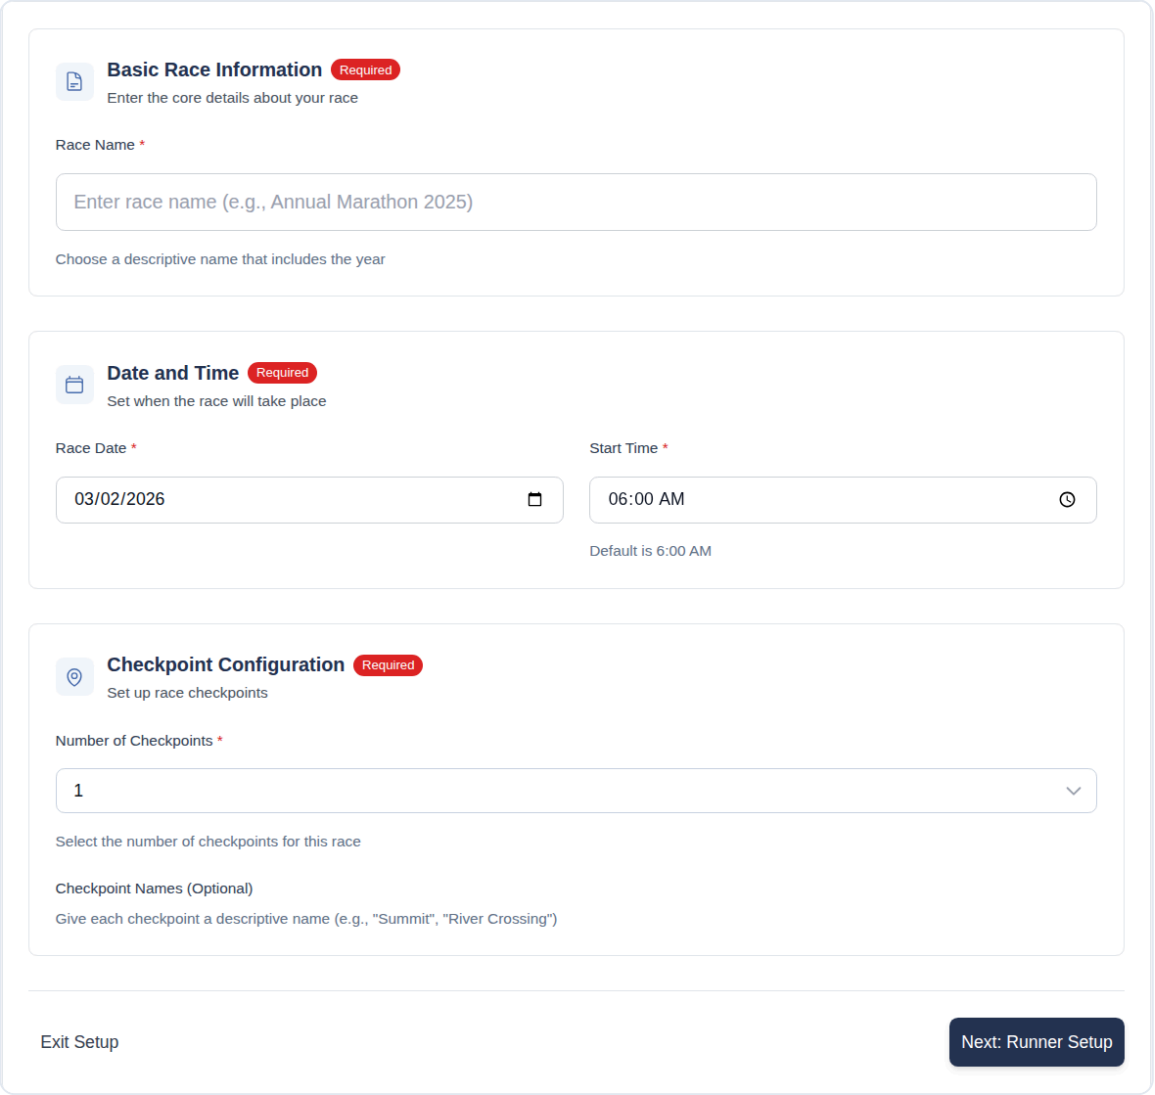
Back: Race Details

Create Race

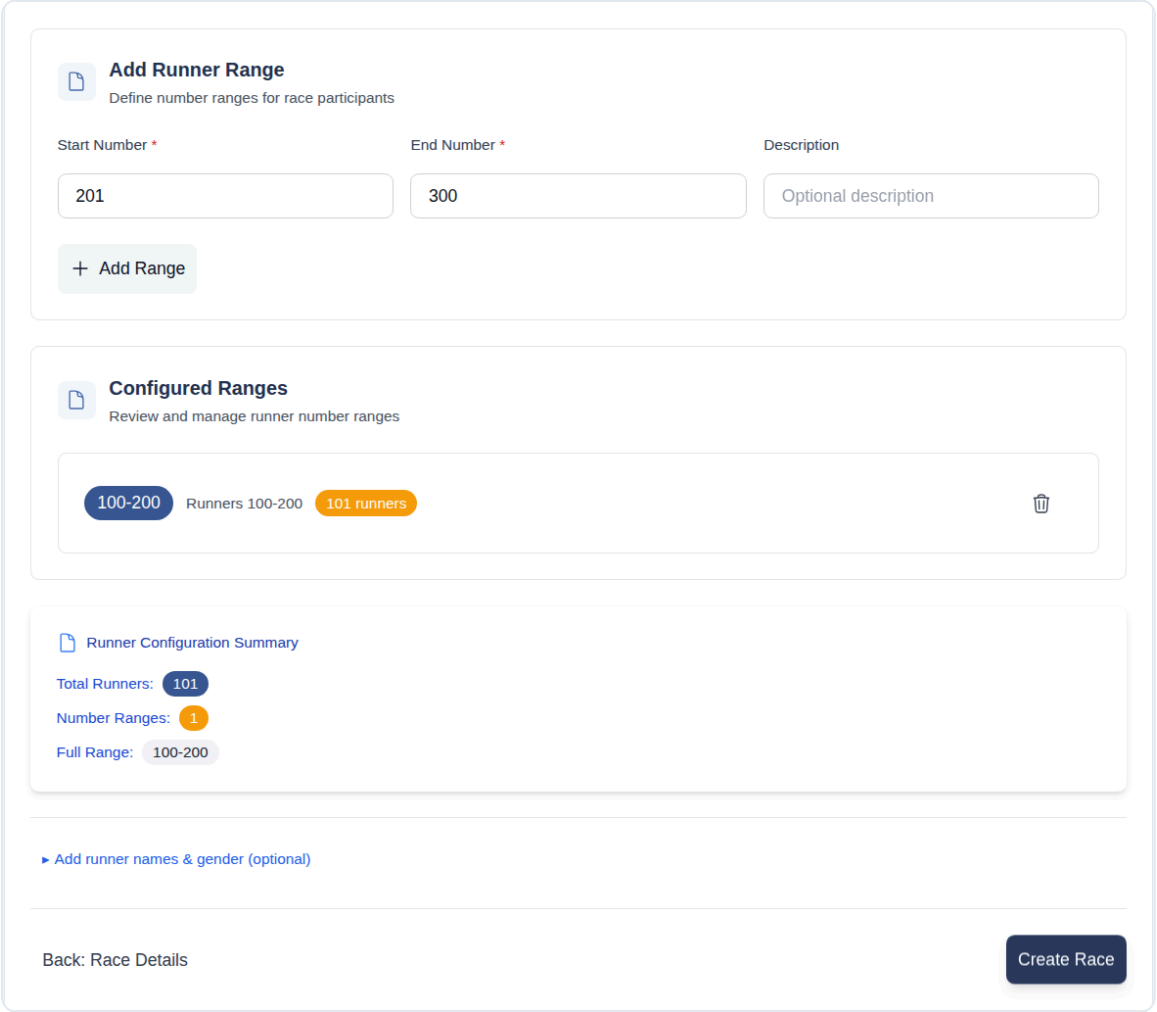
Back button on step 2 returns to race details with data preserved

If a race director fills in the race name and other details on Step 2 of 4 (Race Details), moves on to Step 3 of 4 (Runner Setup), then clicks Back, all their work should still be there — the race name and other fields must not be wiped out. Nobody should have to retype information just because they went back a step.

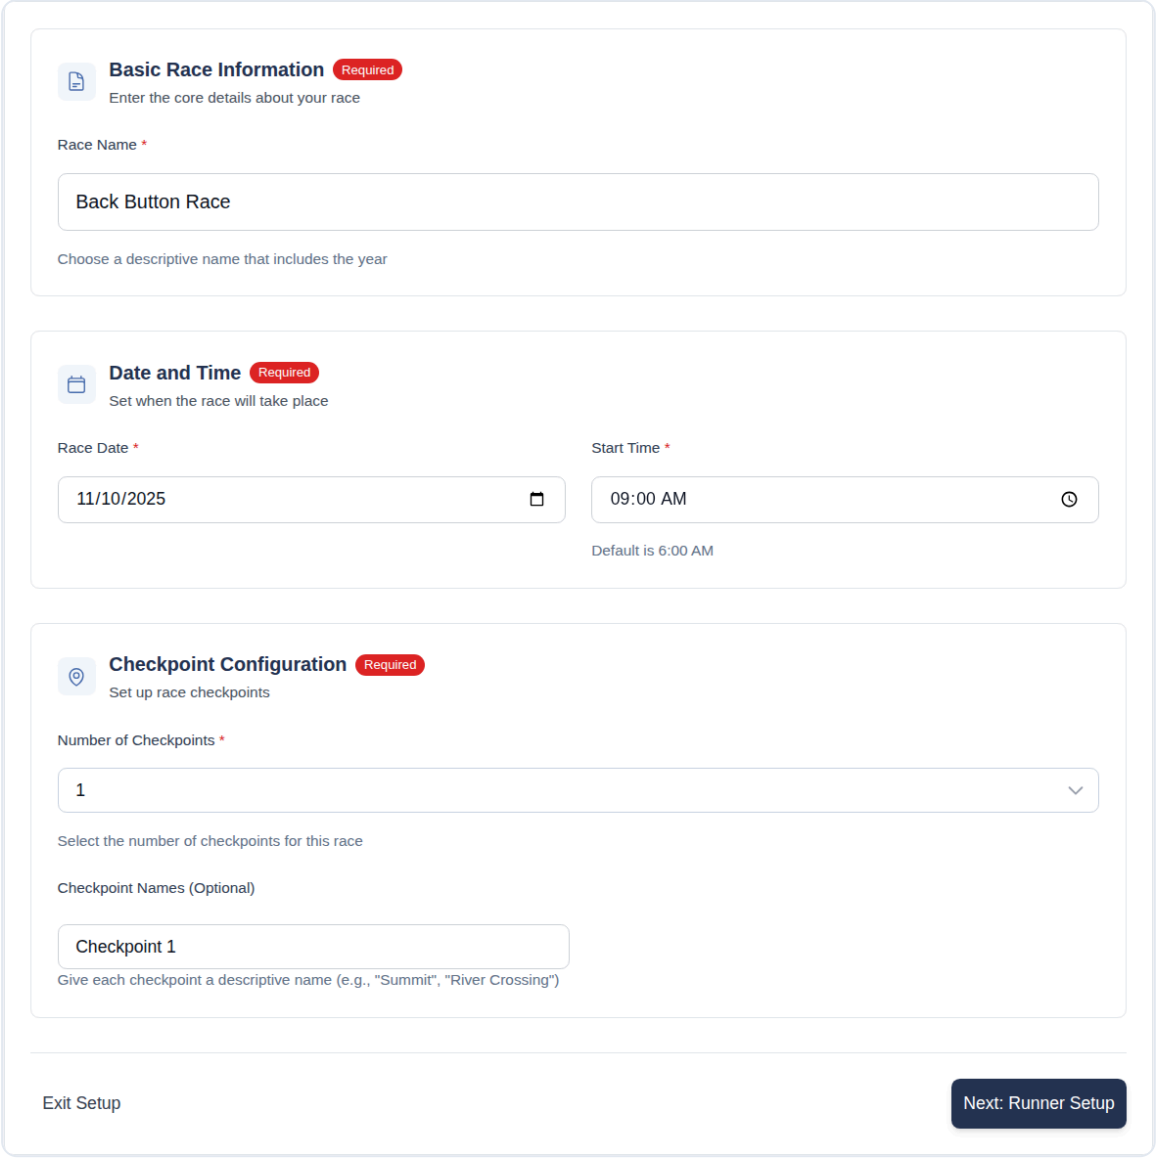
Step 1 of 4 — Template: choose Start from Scratch



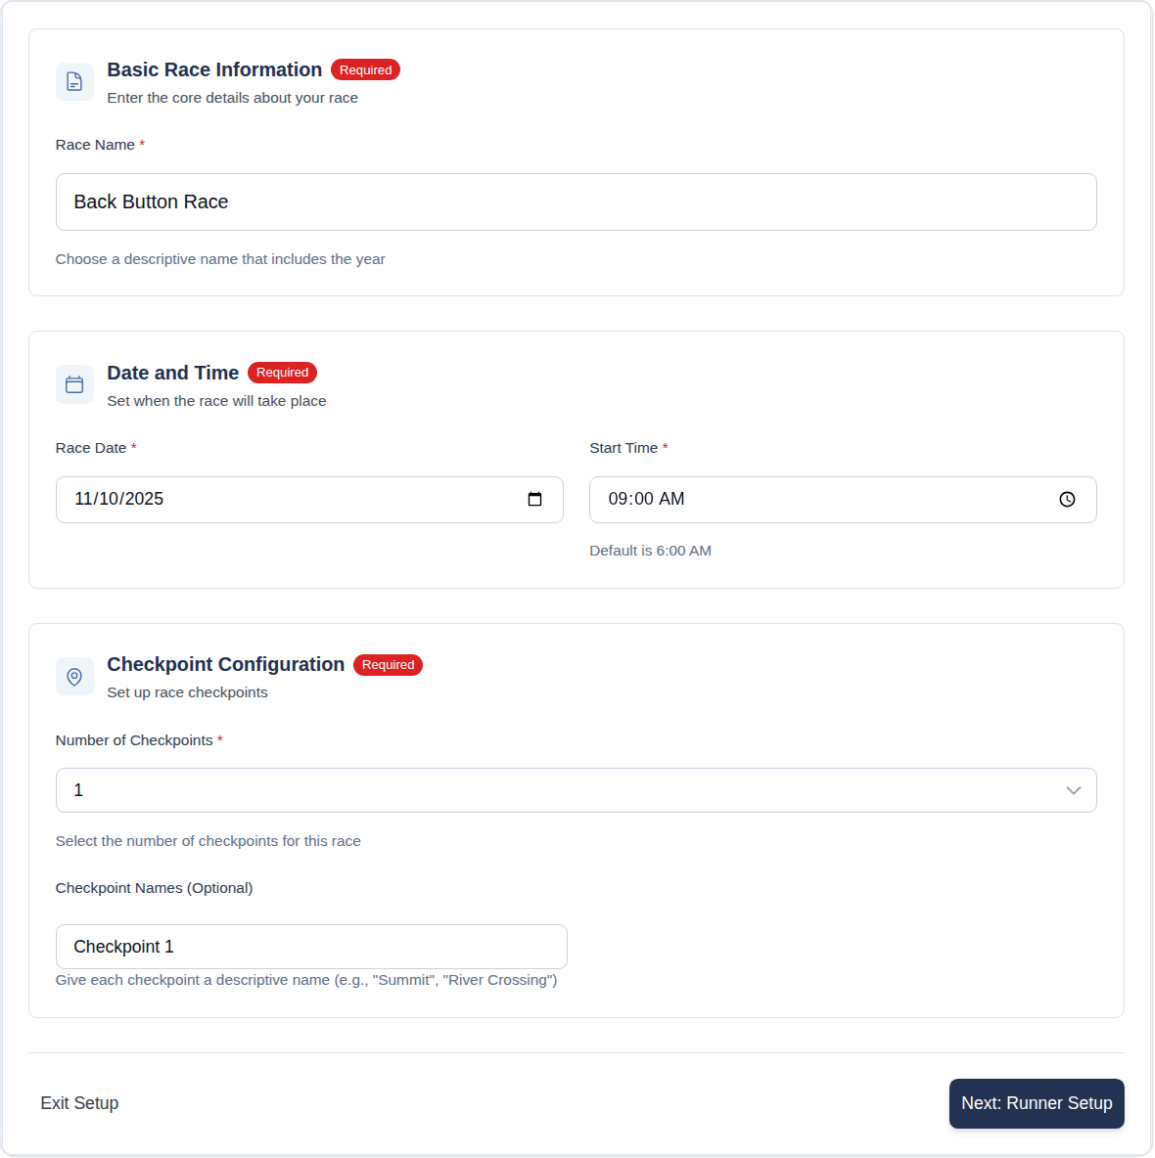
Step 2 of 4 — Race Details: fill in race name and details



Step 3 of 4 — Runner Setup: navigate forward then press Back



Step 2 of 4 — Race Details: data preserved after Back



Race management page lists created races

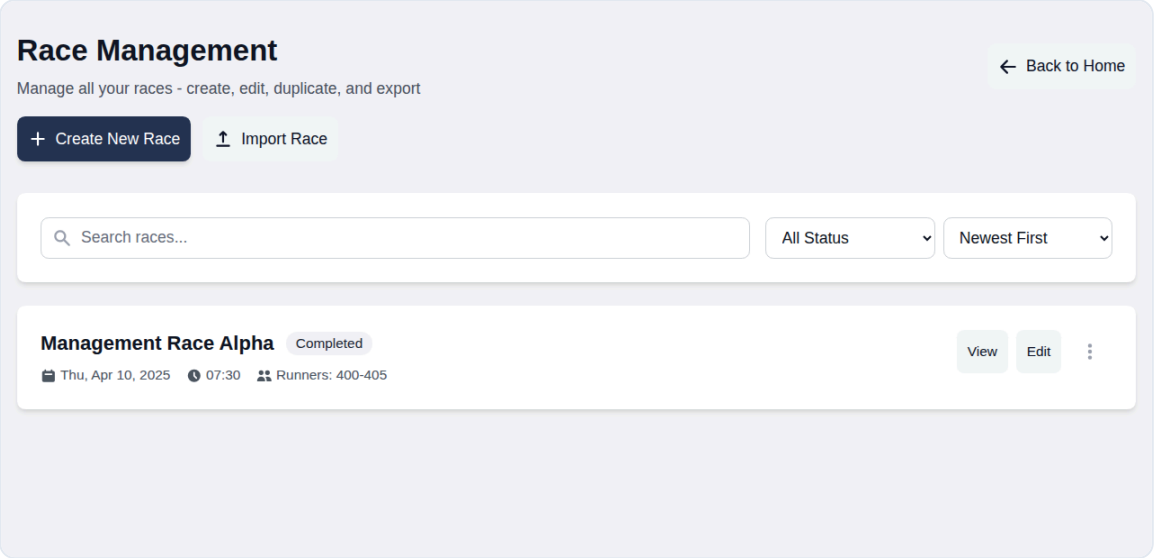
The Race Management page is the race director's central hub where all races are listed. This test confirms that a race created earlier in the test suite appears on that page.

Race Management — page lists all created races

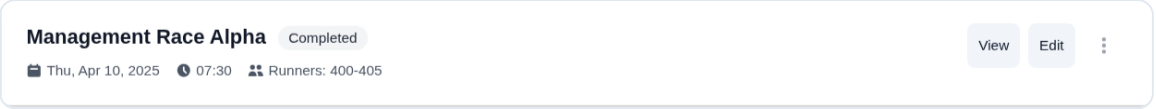
Clicking a race opens its overview

When the race director clicks on a race in the management list, they should be taken to that race's overview page where they can see all the details. This test confirms that navigation works correctly.

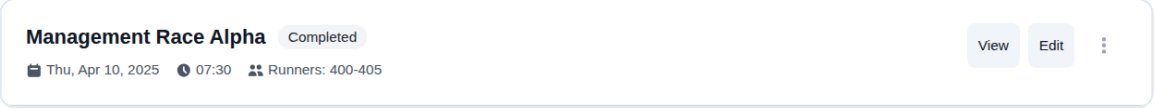
Race Management — page with race listed



Race card — click race name to open overview



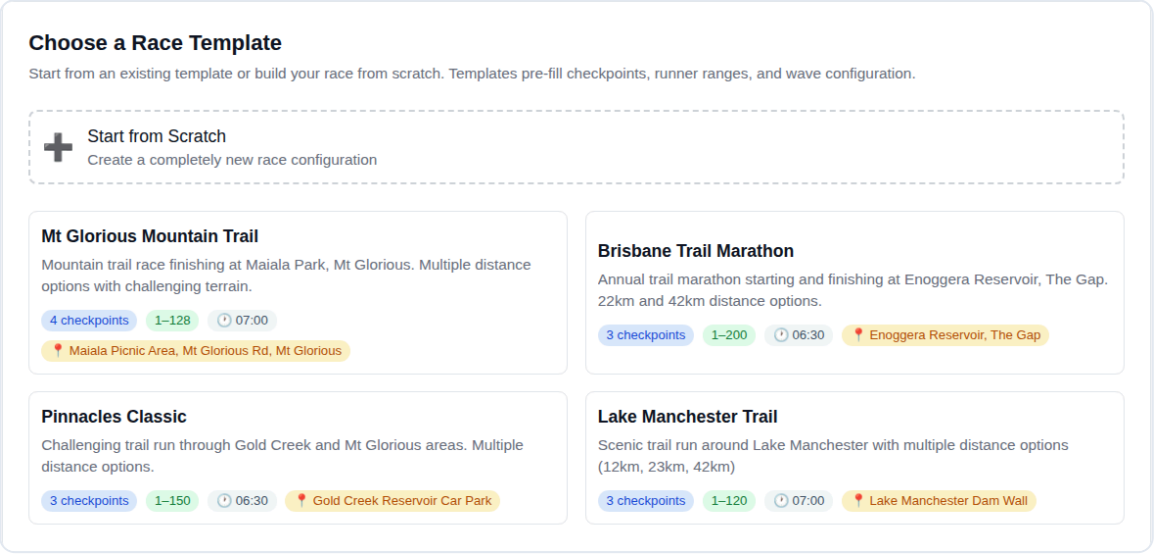
Race overview — name and details visible



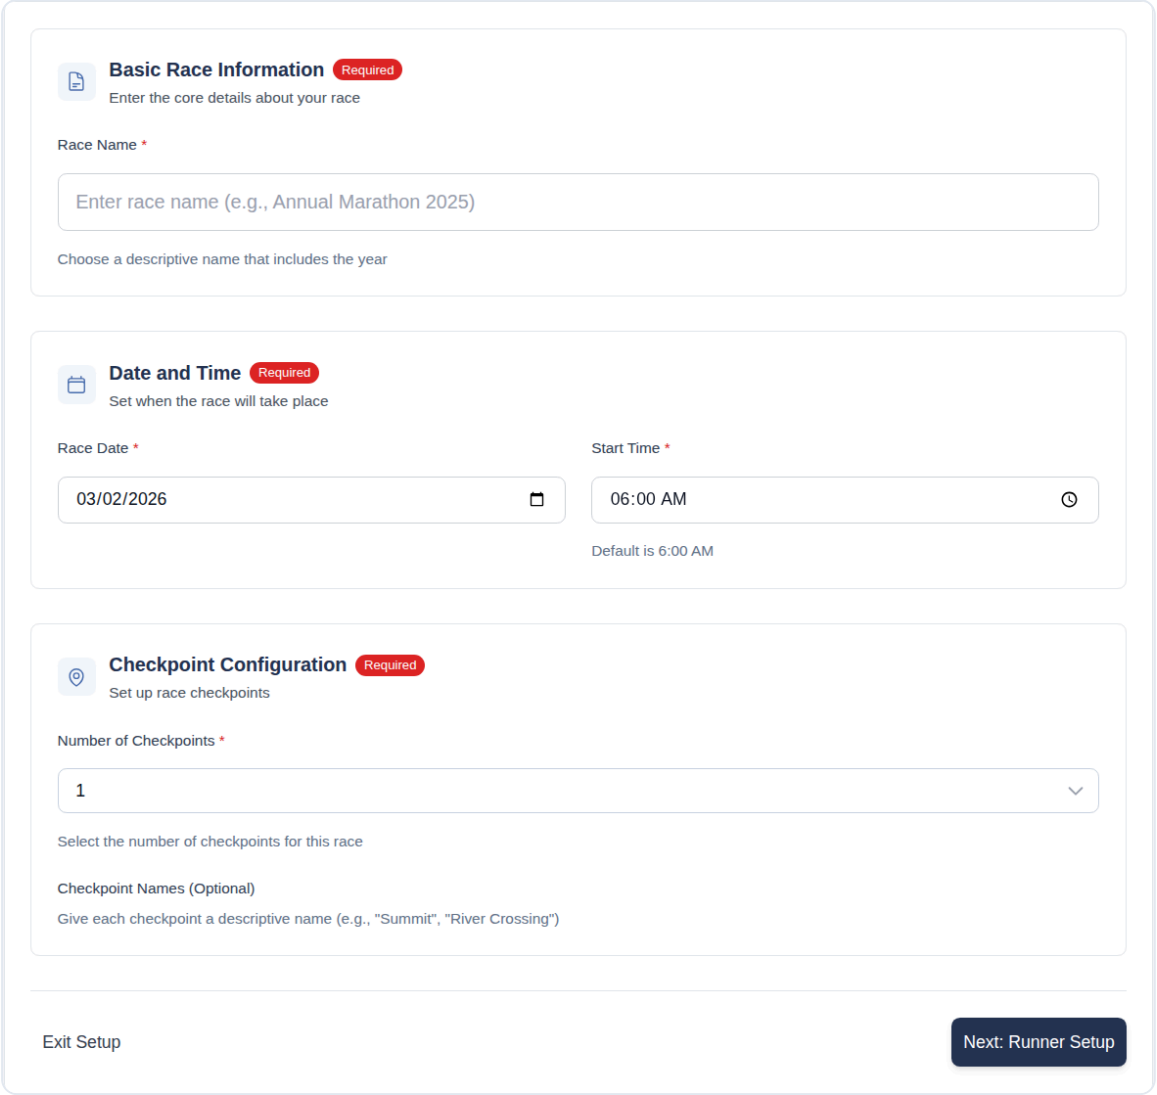
Creates a second race from the management page

A race director creates a second race directly from the management screen, going through the full two-step setup wizard (race details, then runner ranges) and landing on the new race's overview page.

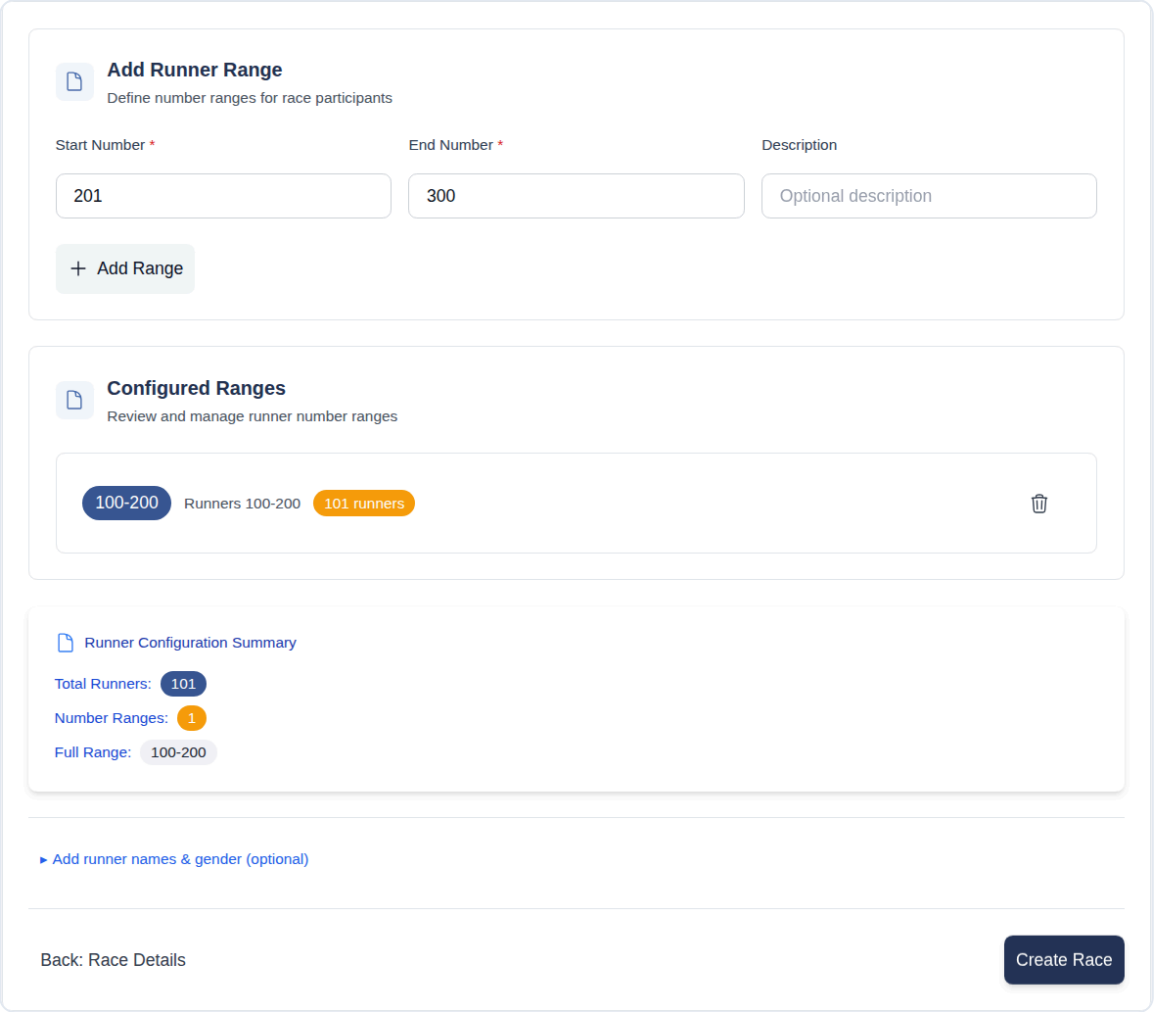
Race Management — tap Create New Race button



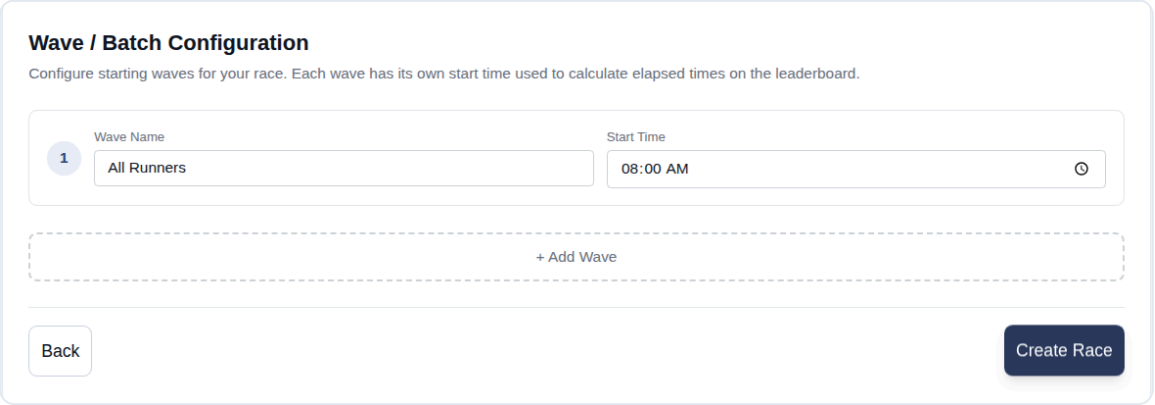
Step 1 of 4 — Template: choose Start from Scratch



Step 2 of 4 — Race Details: enter name, date, start time



Step 3 of 4 — Runner Setup: add bib range 500–503



Step 4 of 4 — Waves: confirm and save

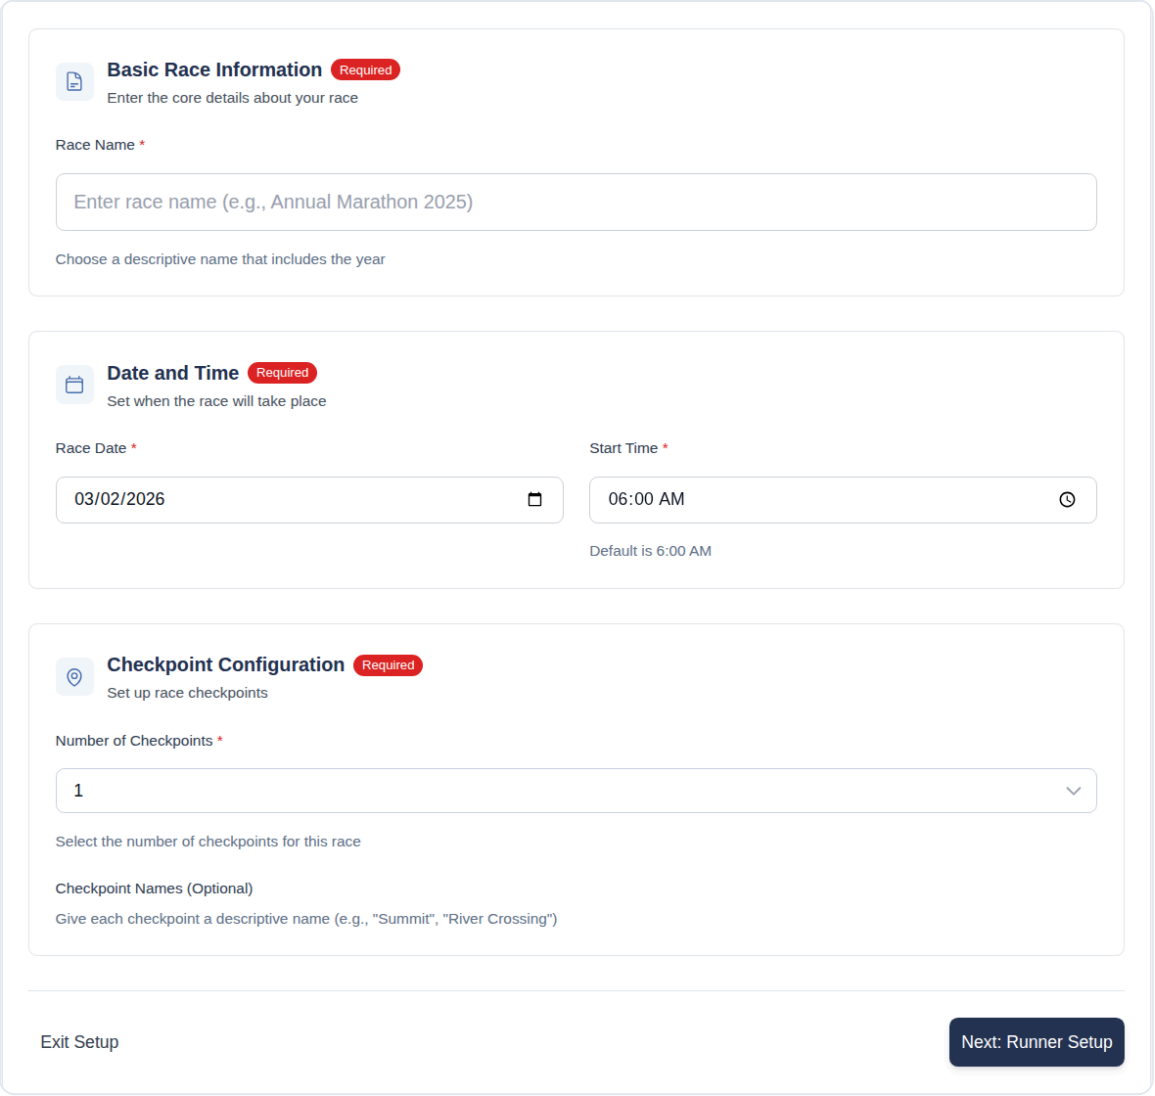
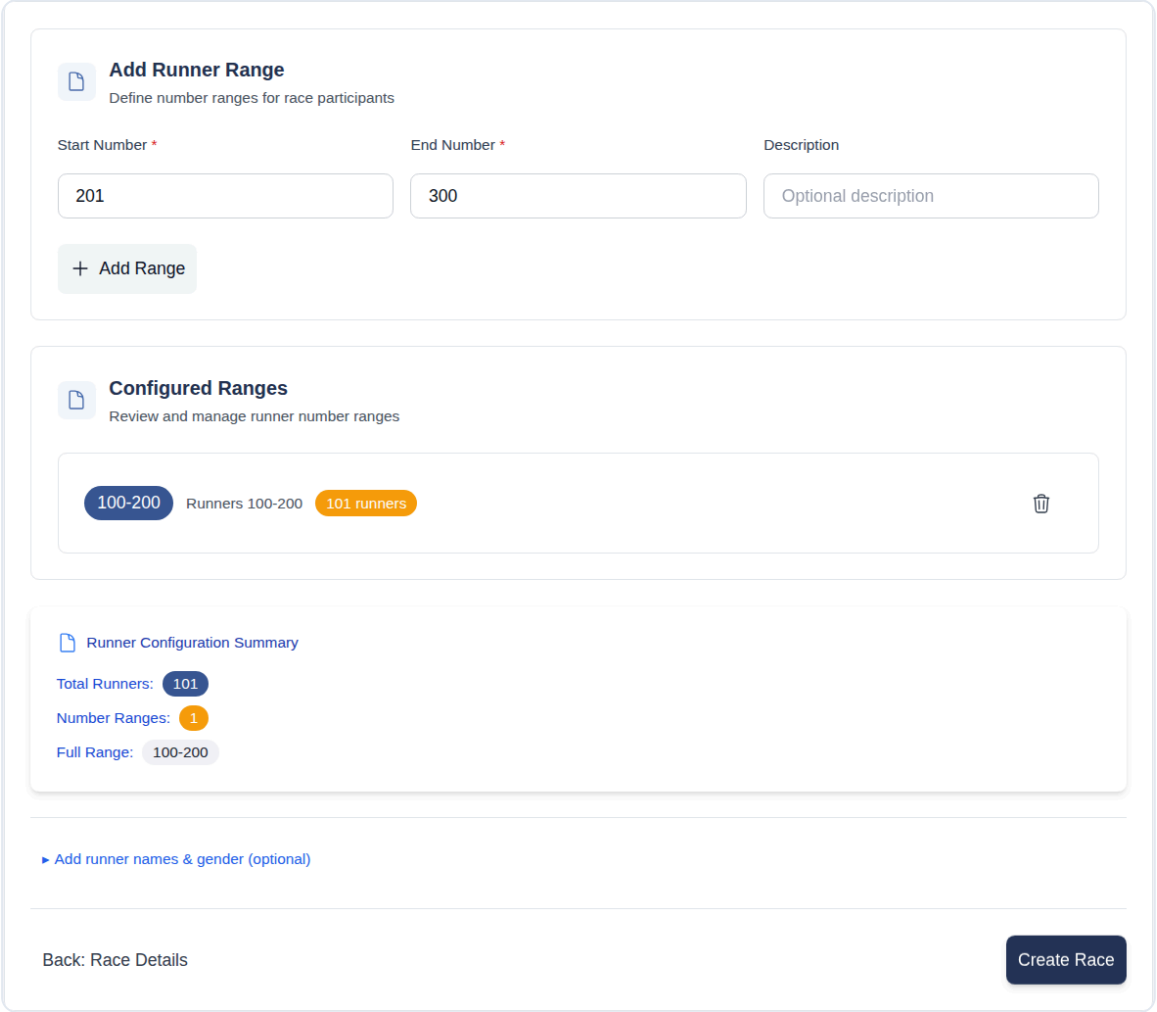
Runner name/gender section appears after adding a range

After a race director adds a bib number range on Step 3 of the setup wizard, an optional section appears for entering runner first names, last names, and gender. This is purely optional — races can be tracked without personal data.

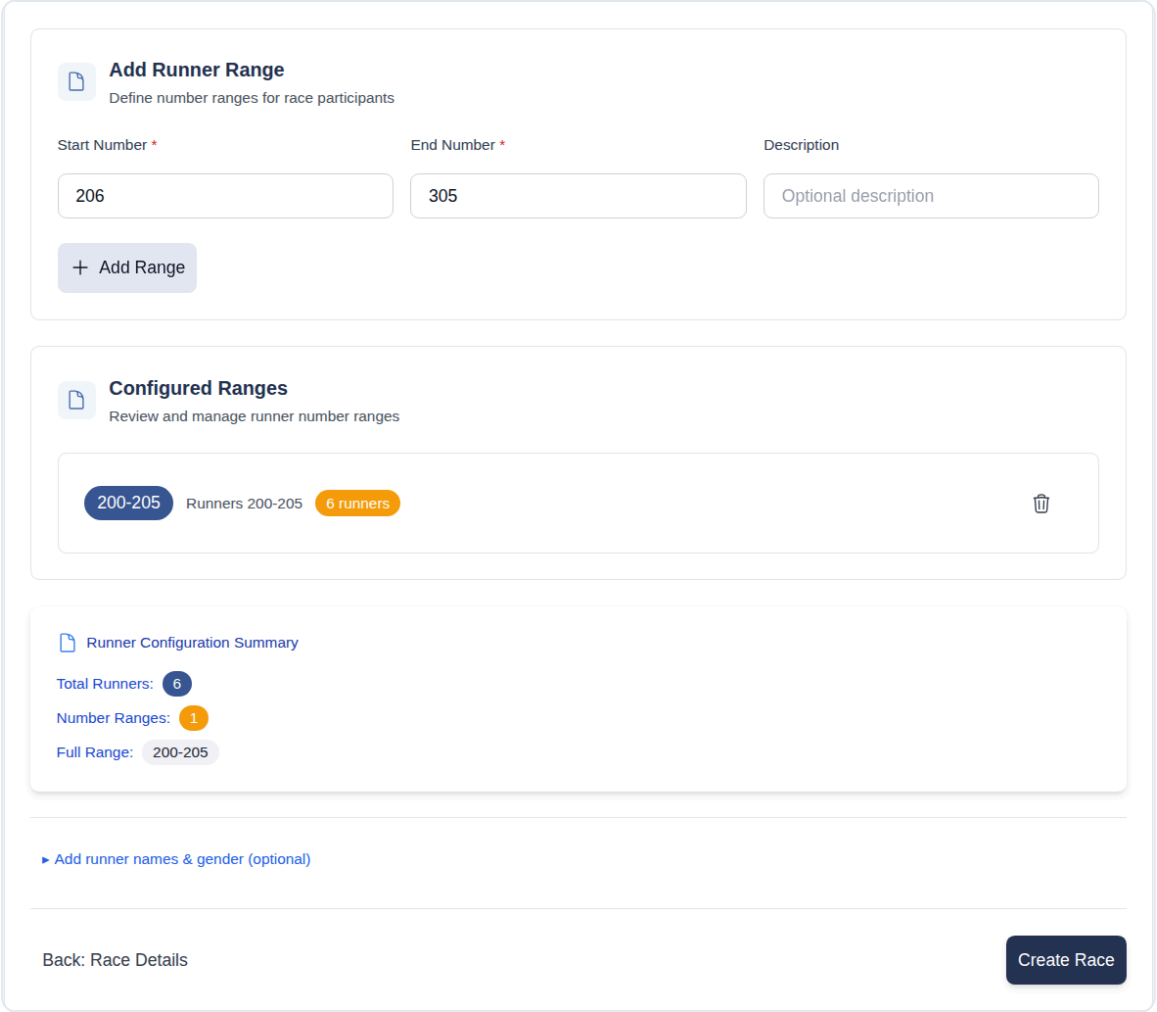
Navigate to race setup wizard



Fill in Race Details and advance to Step 3



Remove default range and add range 200-205



Check that optional names section toggle is visible

Add Runner Range

Define number ranges for race participants

Start Number *

206

End Number *

200-205 Runners 200-205 6 runners

Runner Configuration Summary

Total Runners: 6

Number Ranges: 1

Full Range: 200-205

▸ Add runner names & gender (optional)

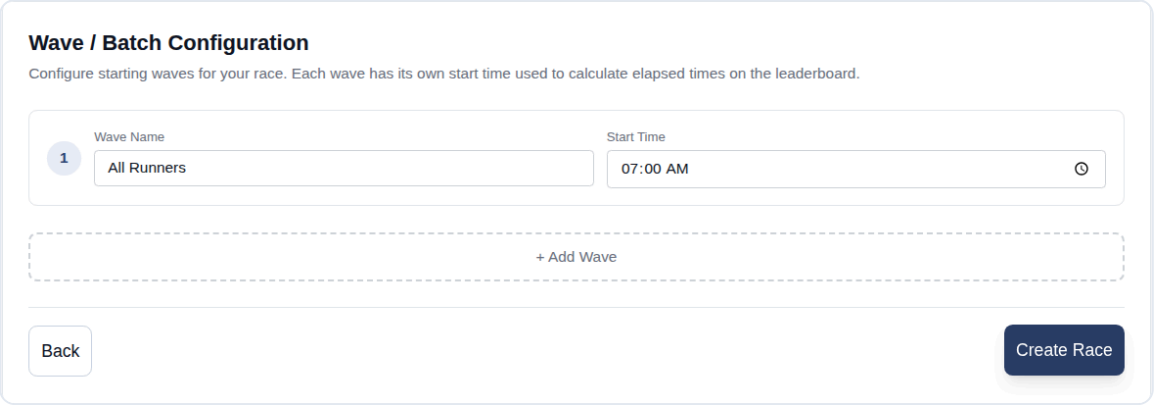
Back: Race Details

Create Race

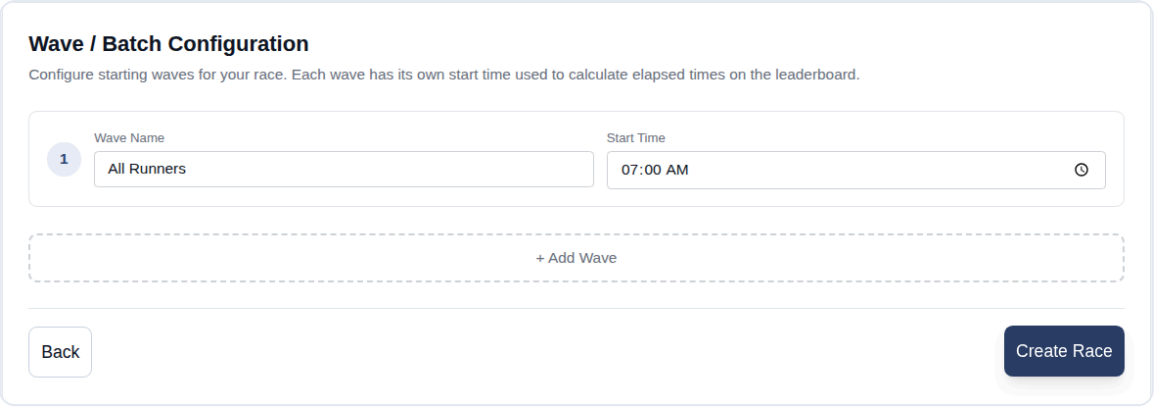
Waves step shows default wave and allows adding more

Step 4 of the race setup wizard is the Waves step, which groups runners into separate start batches. By default one wave is provided. A race director can add a second wave using the Add Wave button.

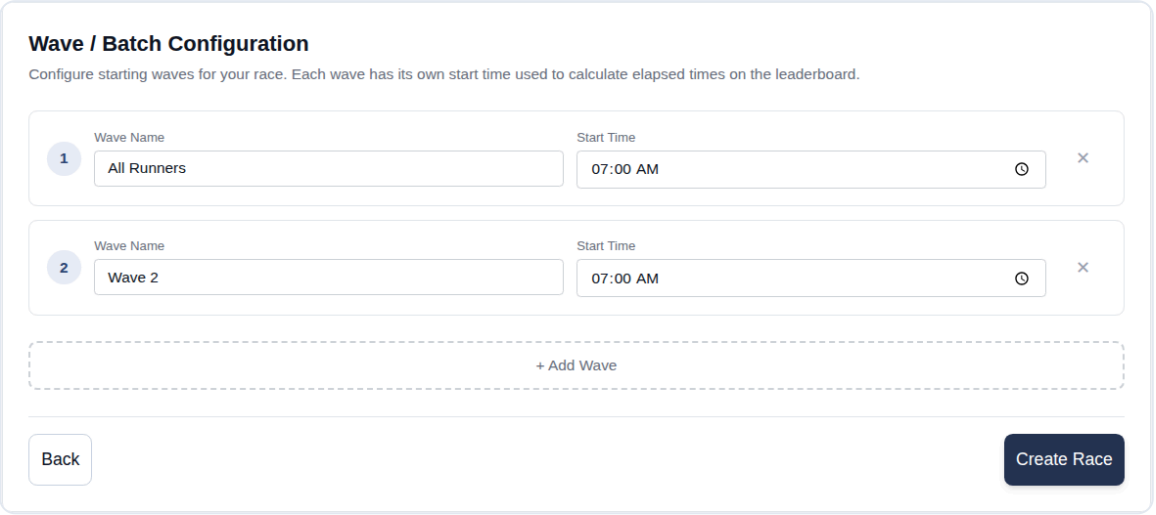
Navigate through setup wizard to the Waves step



Confirm Waves step heading and at least one wave row



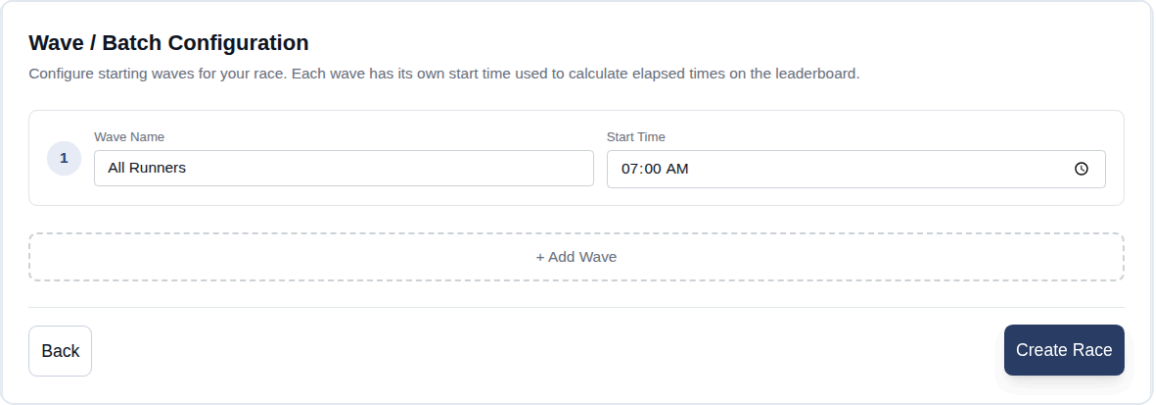
Click "+ Add Wave" to add a second wave



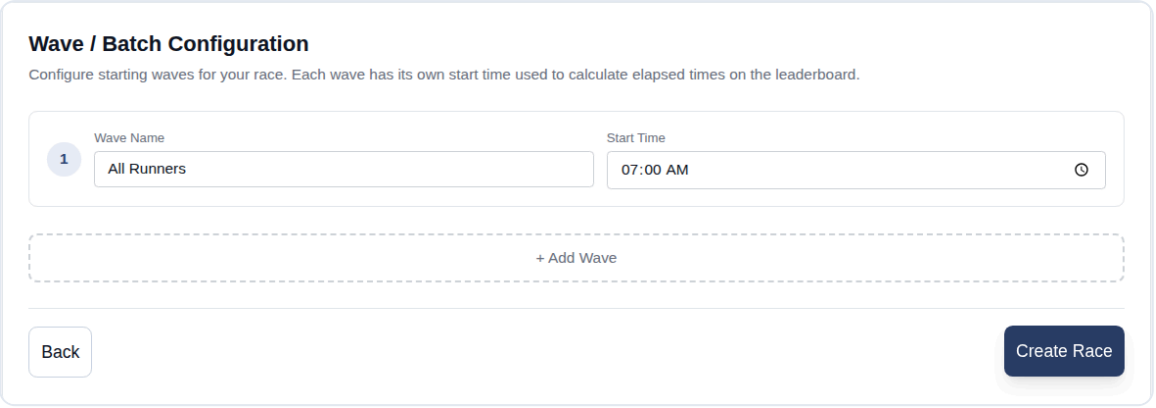
Wave name and time fields are editable and save

A race director can give each wave a custom name (e.g. "Wave B") and a specific start time (e.g. "07:30"). These are saved to the database so checkpoint volunteers know when each wave started.

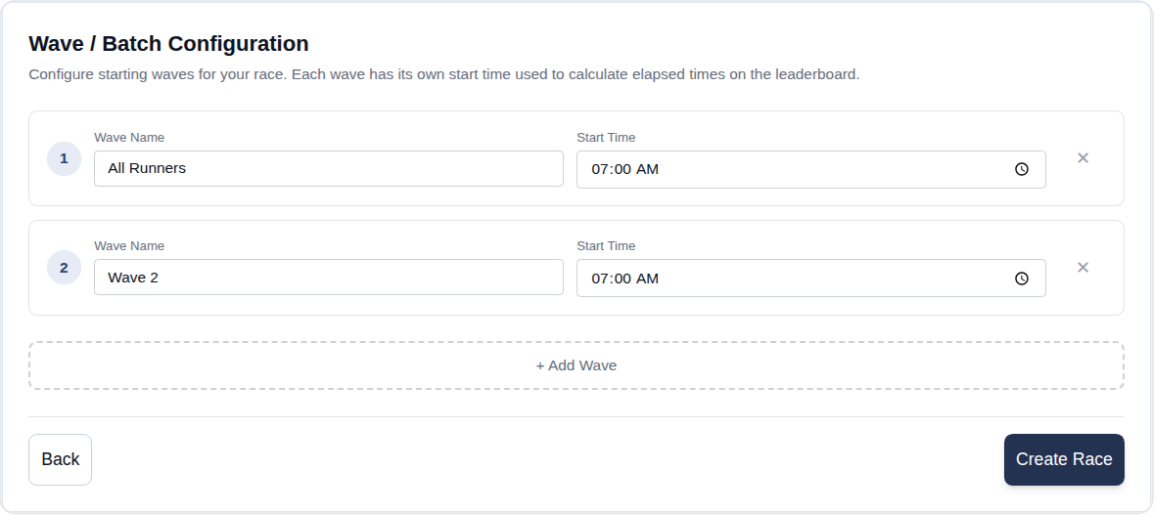
Navigate through setup wizard to the Waves step



Confirm "+ Add Wave" button is available



Add a second wave



Set second wave name to "Wave B" and start time to "07:30"

Verify "Wave B" appears in the wave name input
