⚡ RaceTracker Pro — User Guide

Setting Up a Race

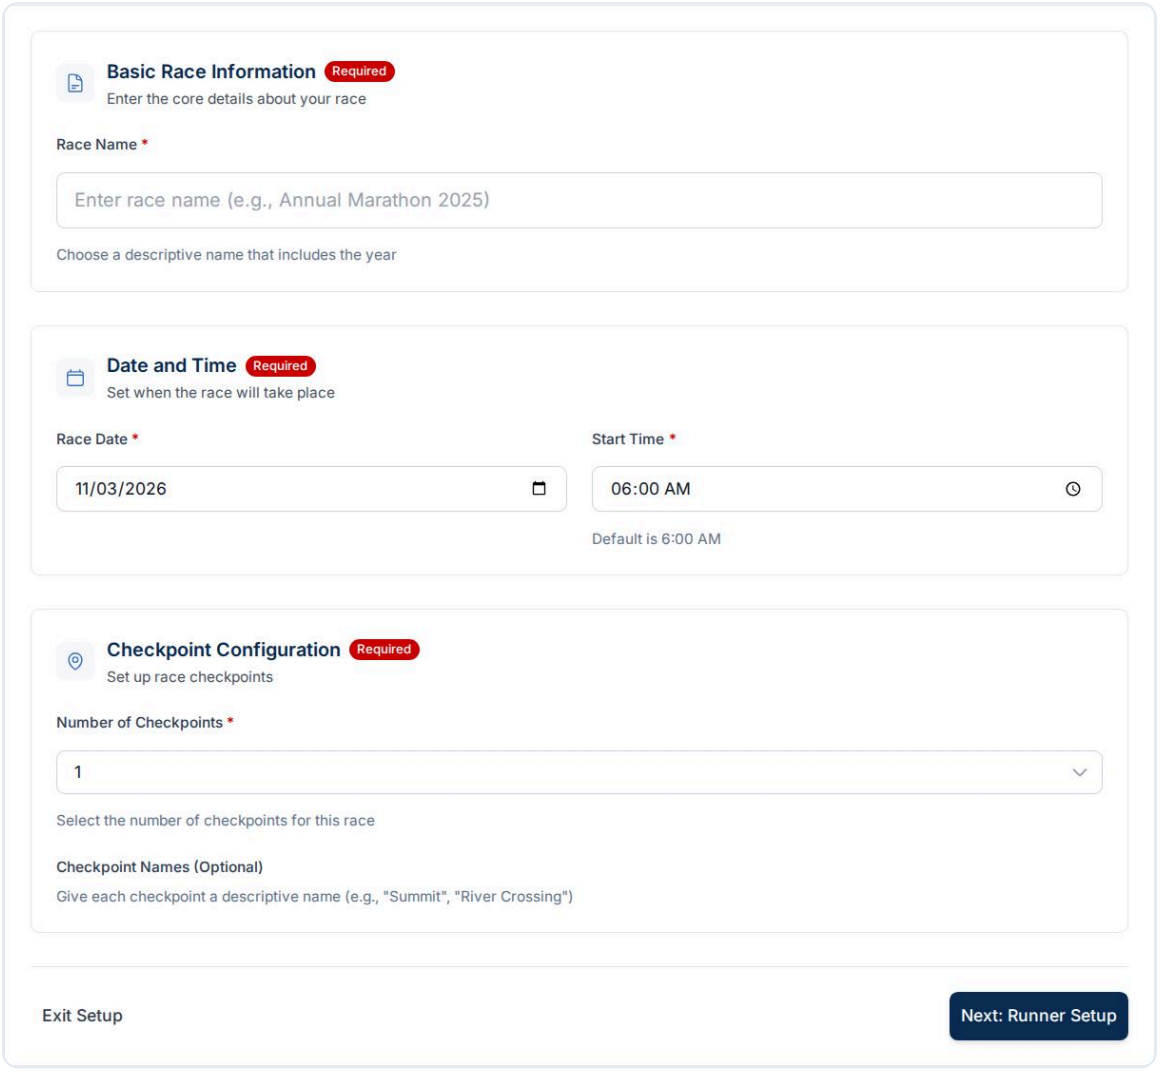

Setting Up a Race

Use these steps to create and manage races. This section covers the full setup wizard, runner ranges, checkpoints, waves, and the race overview.

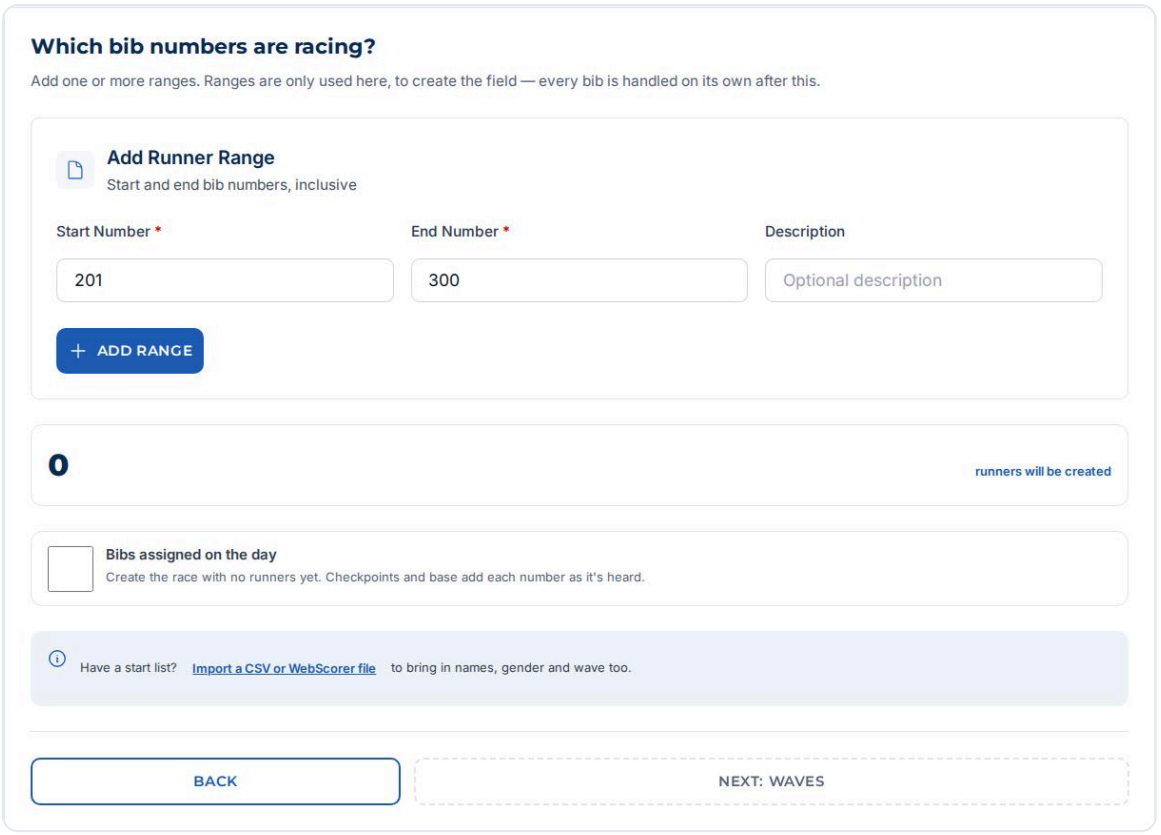

Step indicator advances correctly through setup wizard

The race creation wizard has four steps: Template, Race Details, Runner Setup, and Waves. This test checks that the progress indicator at the top updates as you advance through each step, so the race director always knows where they are in the setup process.

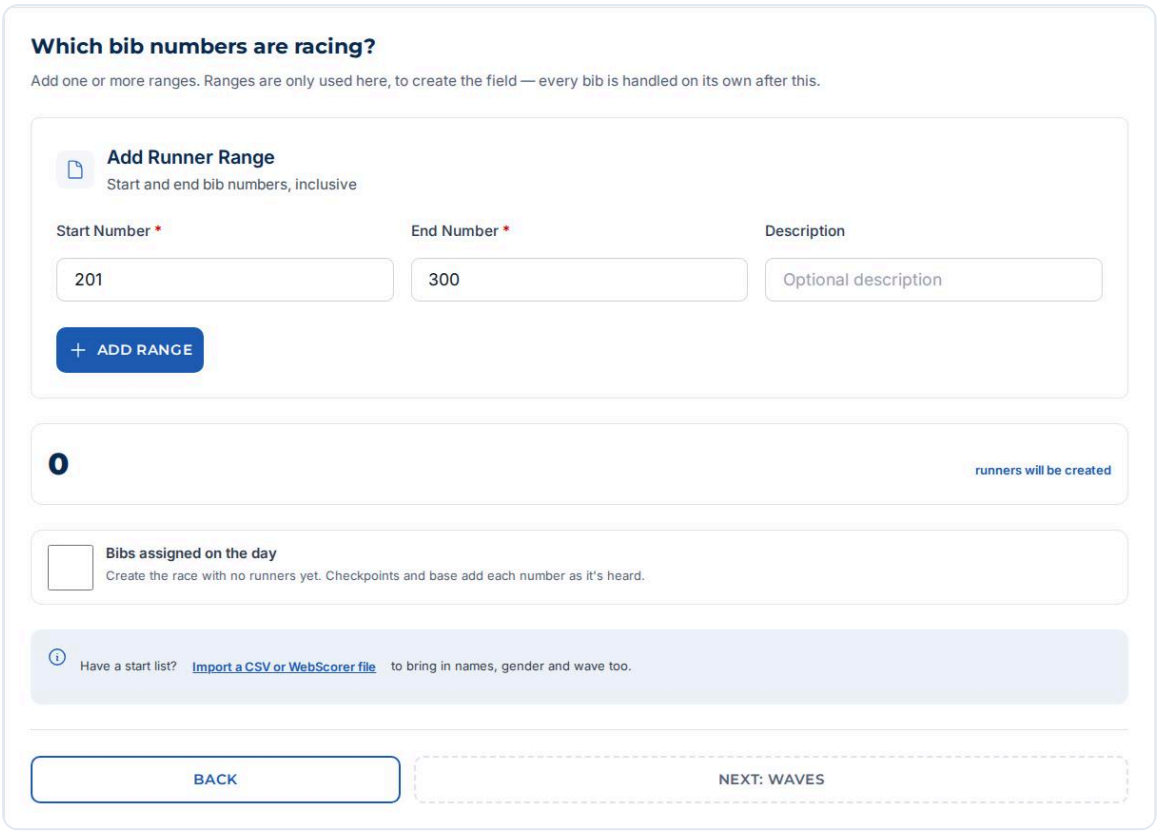

Step 1 of 4 — Template: setup wizard opens

Step 2 of 4 — Race Details: step indicator shows step 2

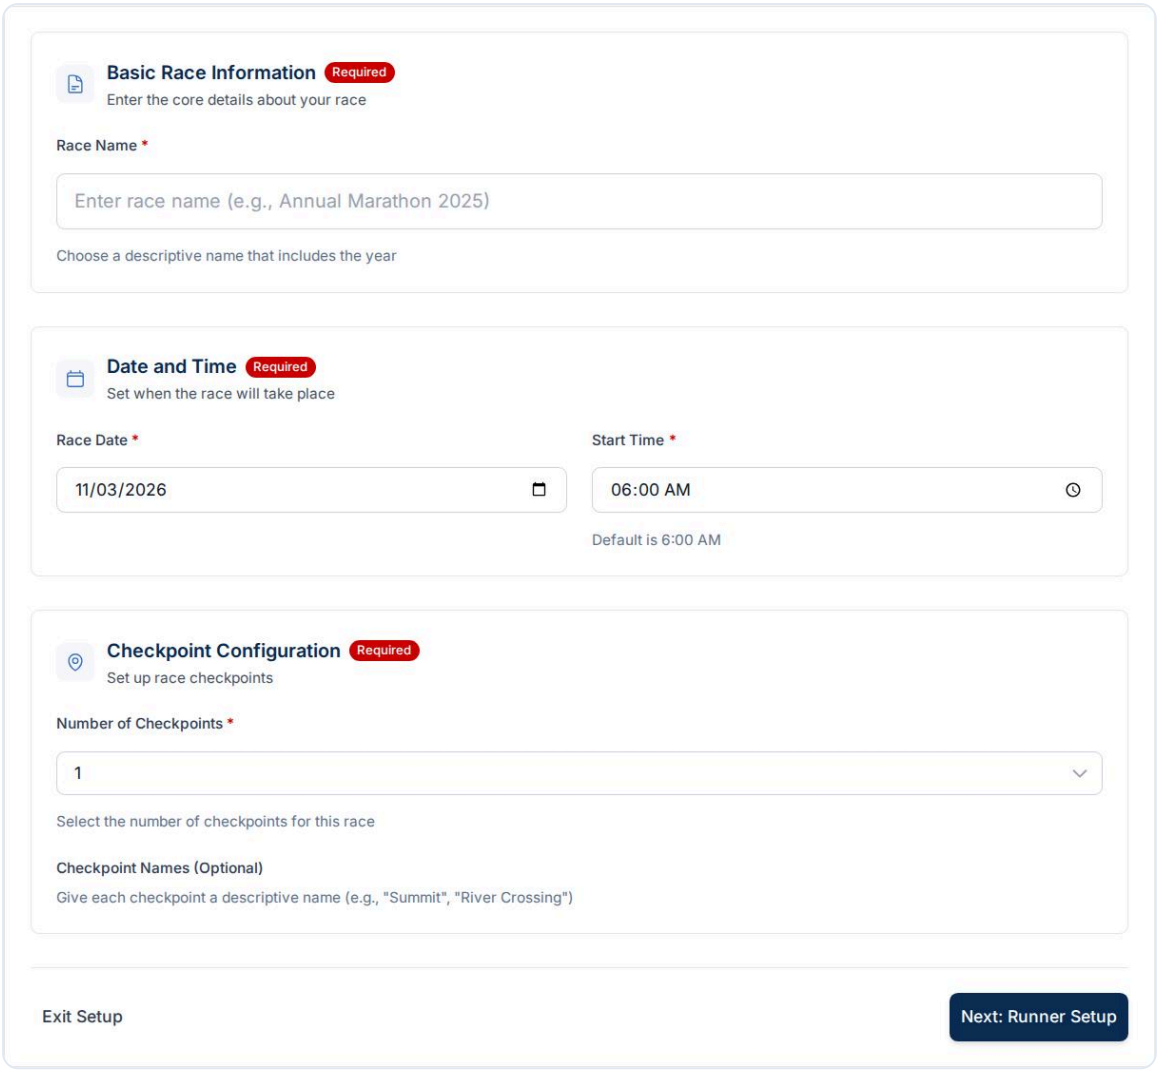

Step 3 of 4 — Runner Setup: step indicator advances to step 3

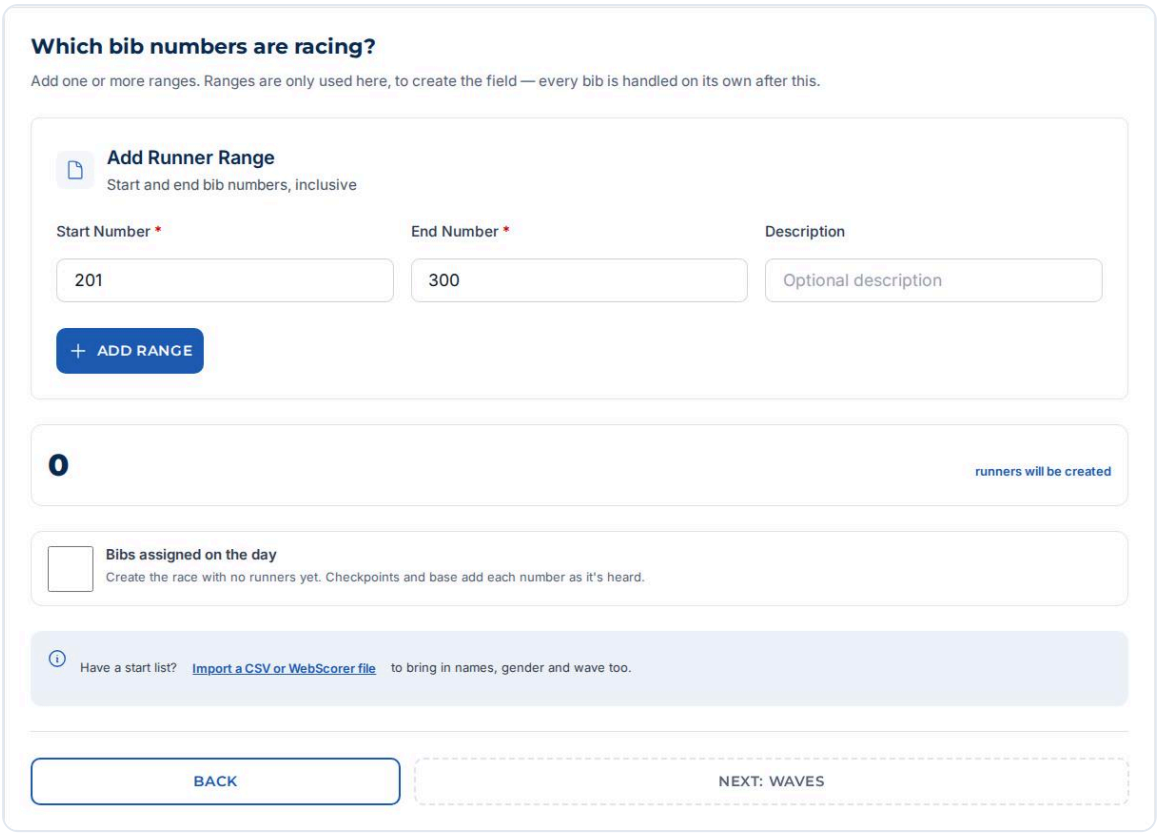

Back button on step 2 returns to race details with data preserved

If a race director fills in the race name and other details on Step 2 of 4 (Race Details), moves on to Step 3 of 4 (Runner Setup), then clicks Back, all their work should still be there — the race name and other fields must not be wiped out. Nobody should have to retype information just because they went back a step.

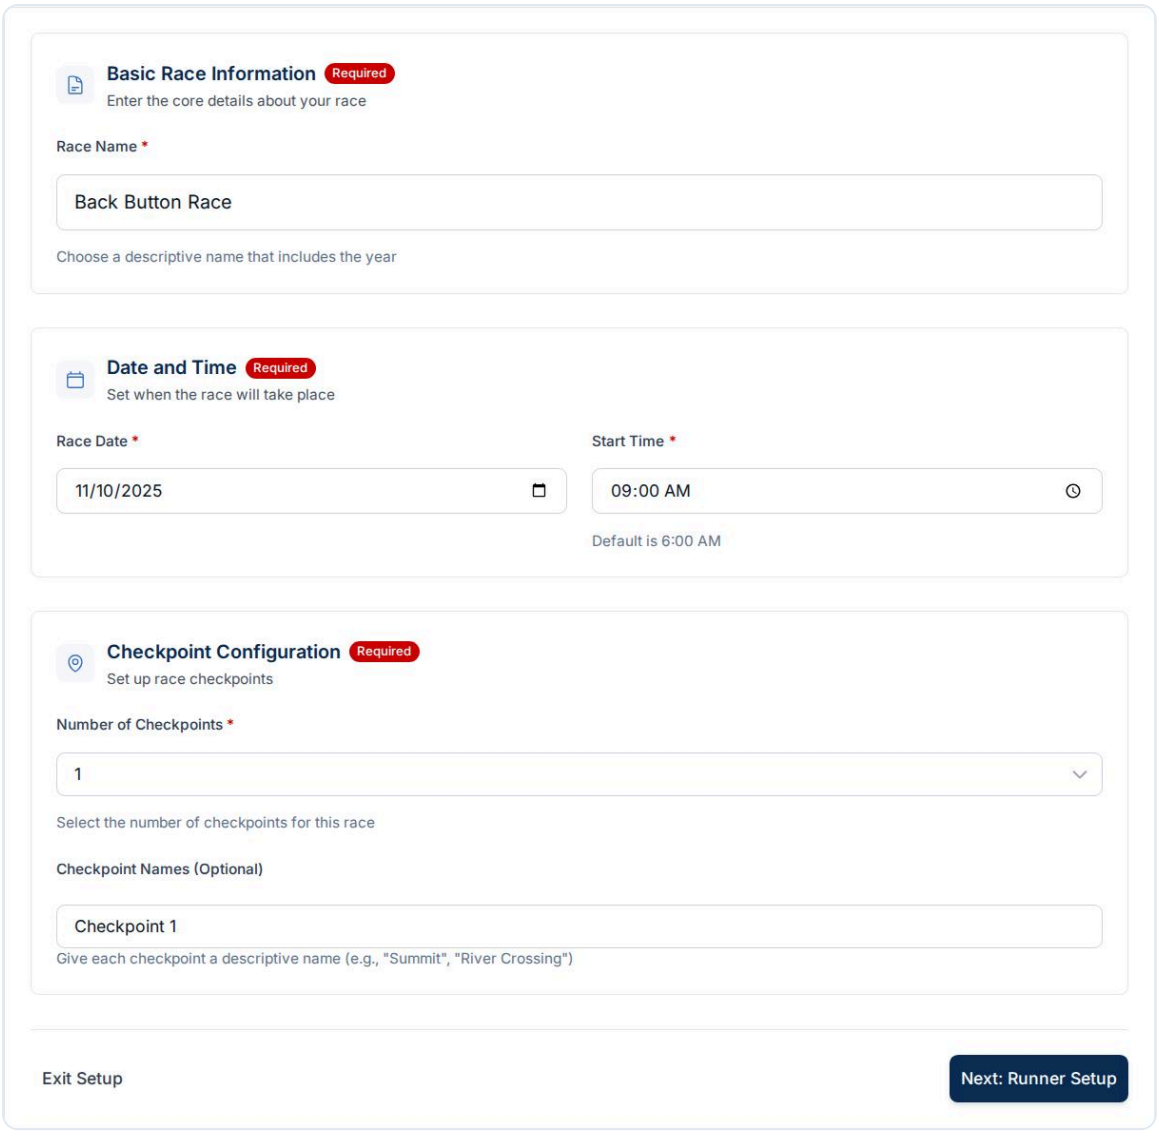

Step 1 of 4 — Template: choose Start from Scratch

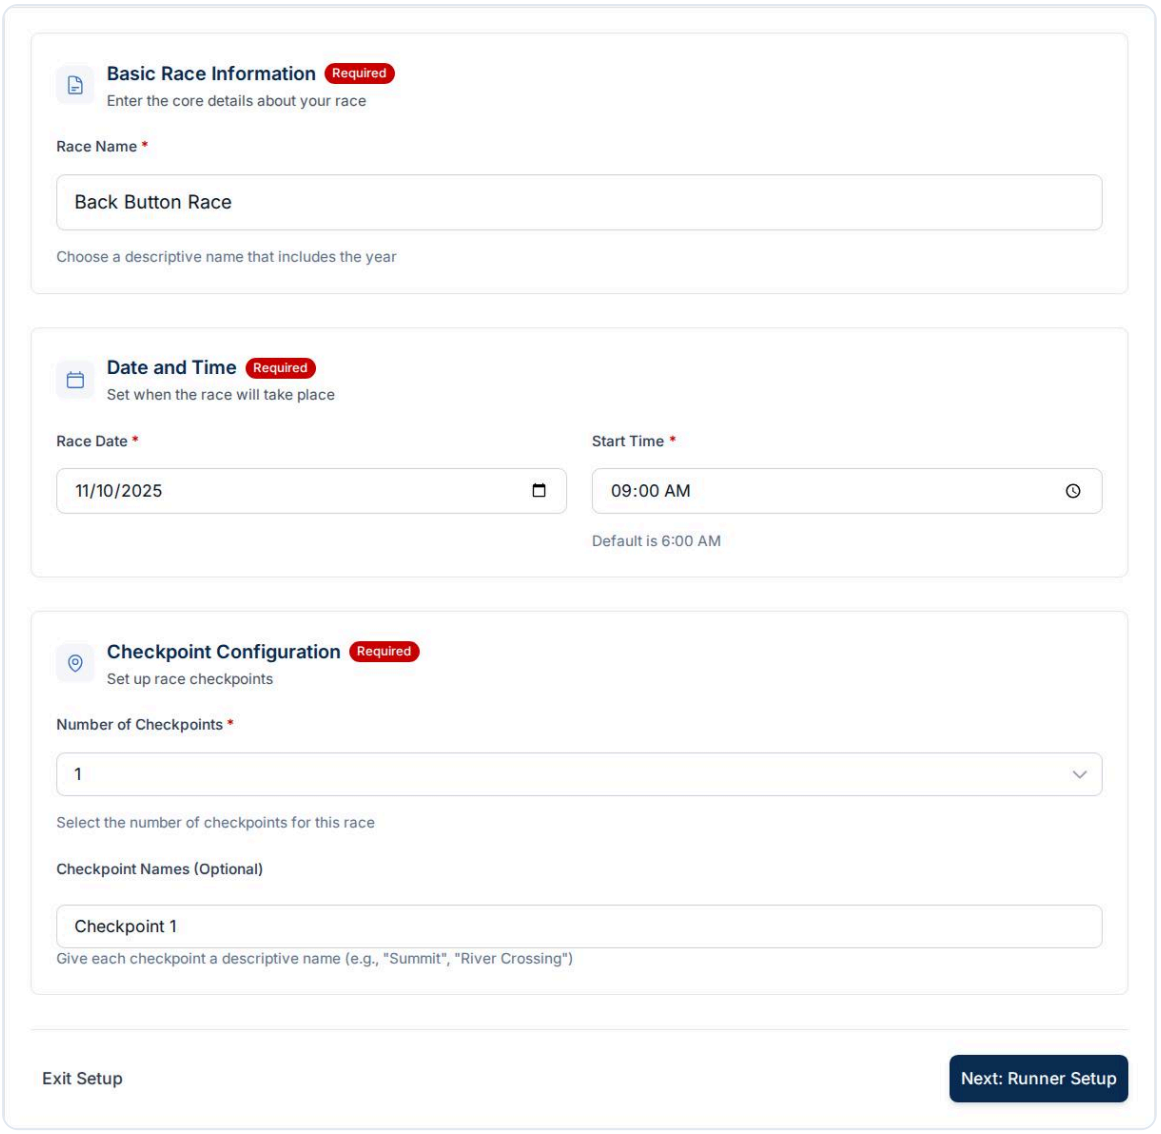

Step 2 of 4 — Race Details: fill in race name and details

Step 3 of 4 — Runner Setup: navigate forward then press Back

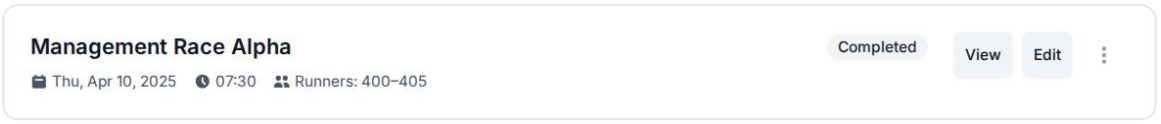

Step 2 of 4 — Race Details: data preserved after Back

Race management page lists created races

The Race Management page is the race director's central hub where all races are listed. This test confirms that a race created earlier in the test suite appears on that page.

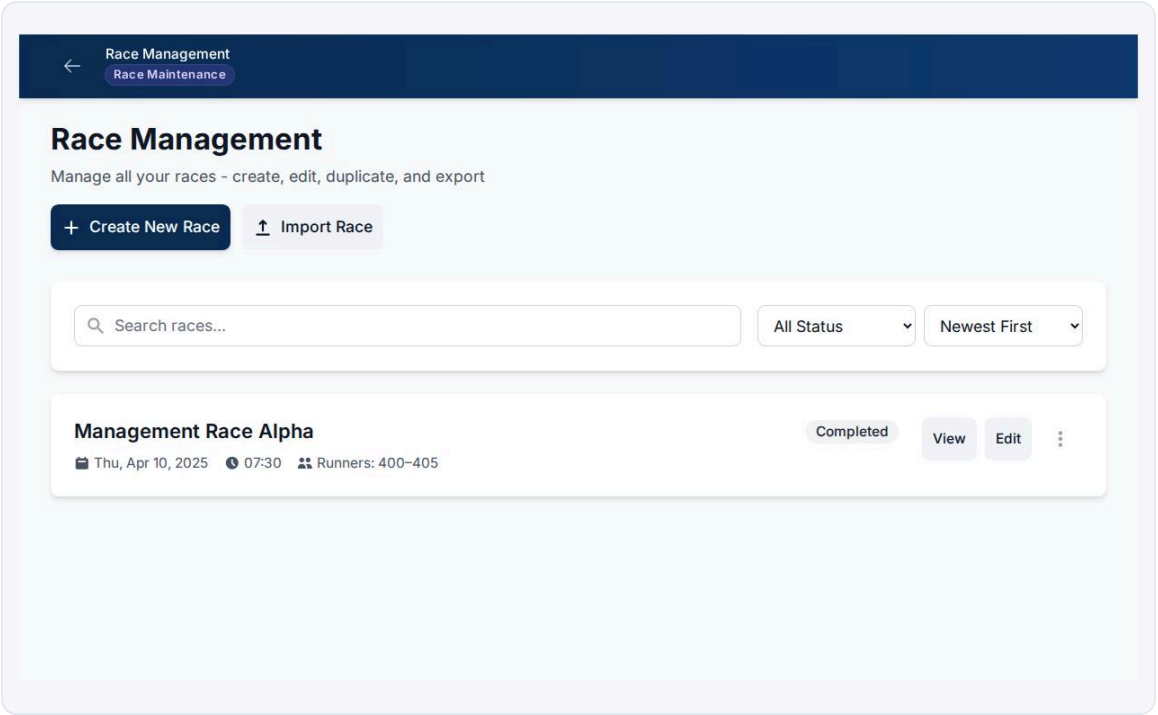

Race Management — page lists all created races

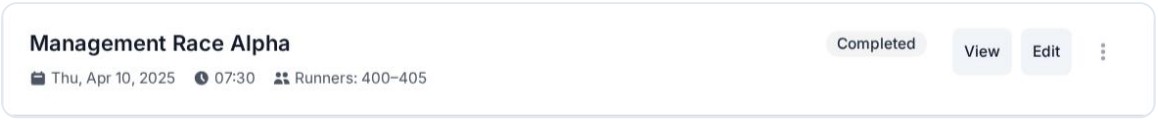

Clicking a race opens its overview

When the race director clicks on a race in the management list, they should be taken to that race's overview page where they can see all the details. This test confirms that navigation works correctly.

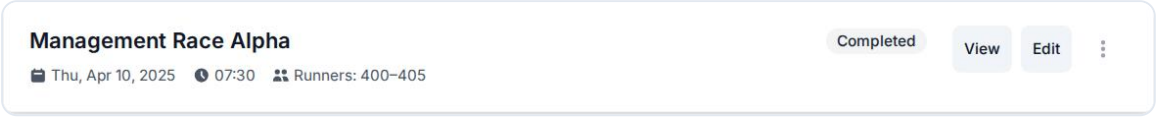

Race Management — page with race listed

Race card — click race name to open overview

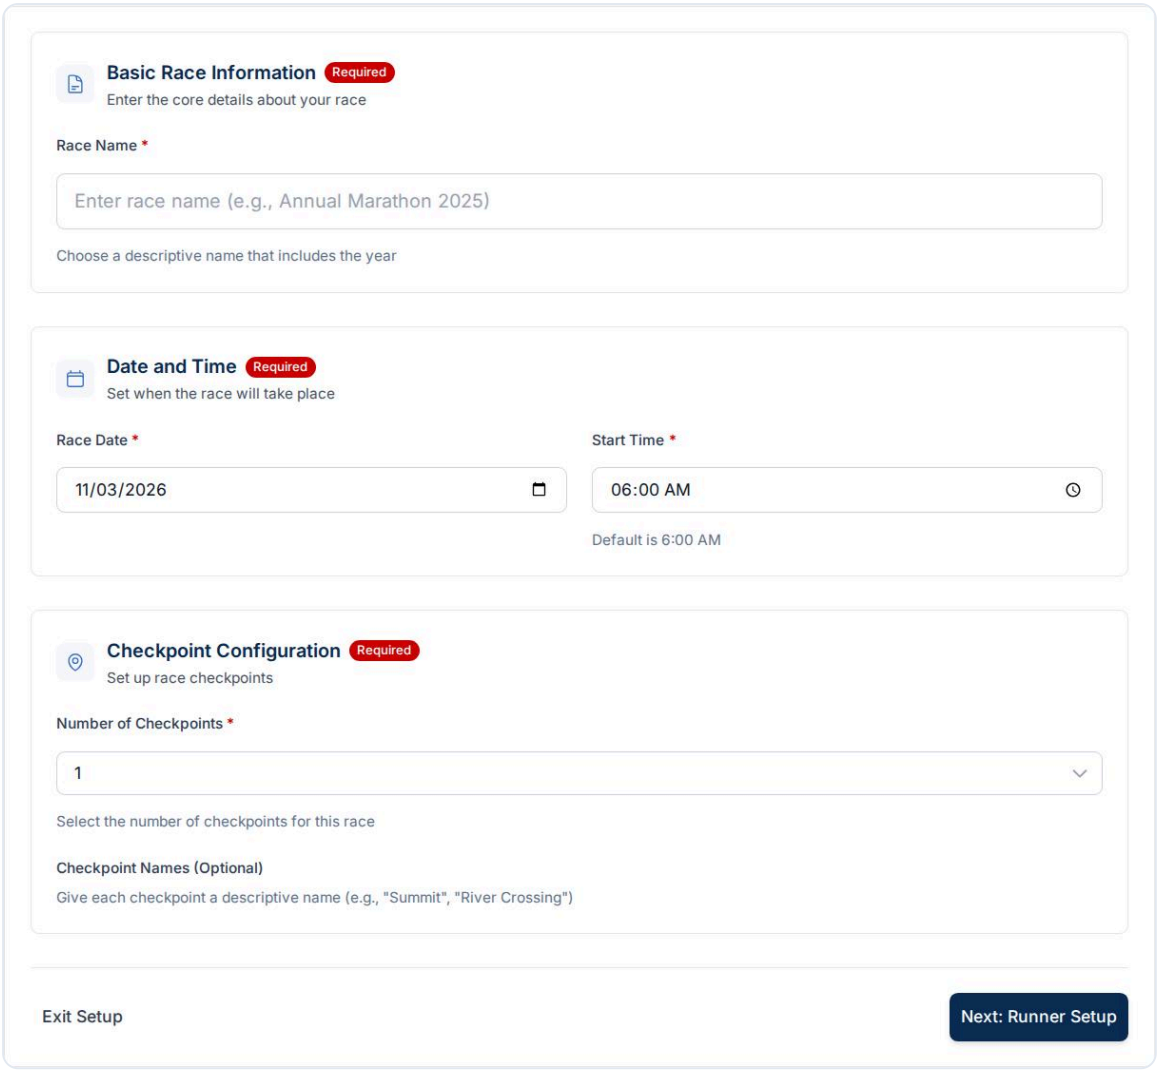

Race overview — name and details visible

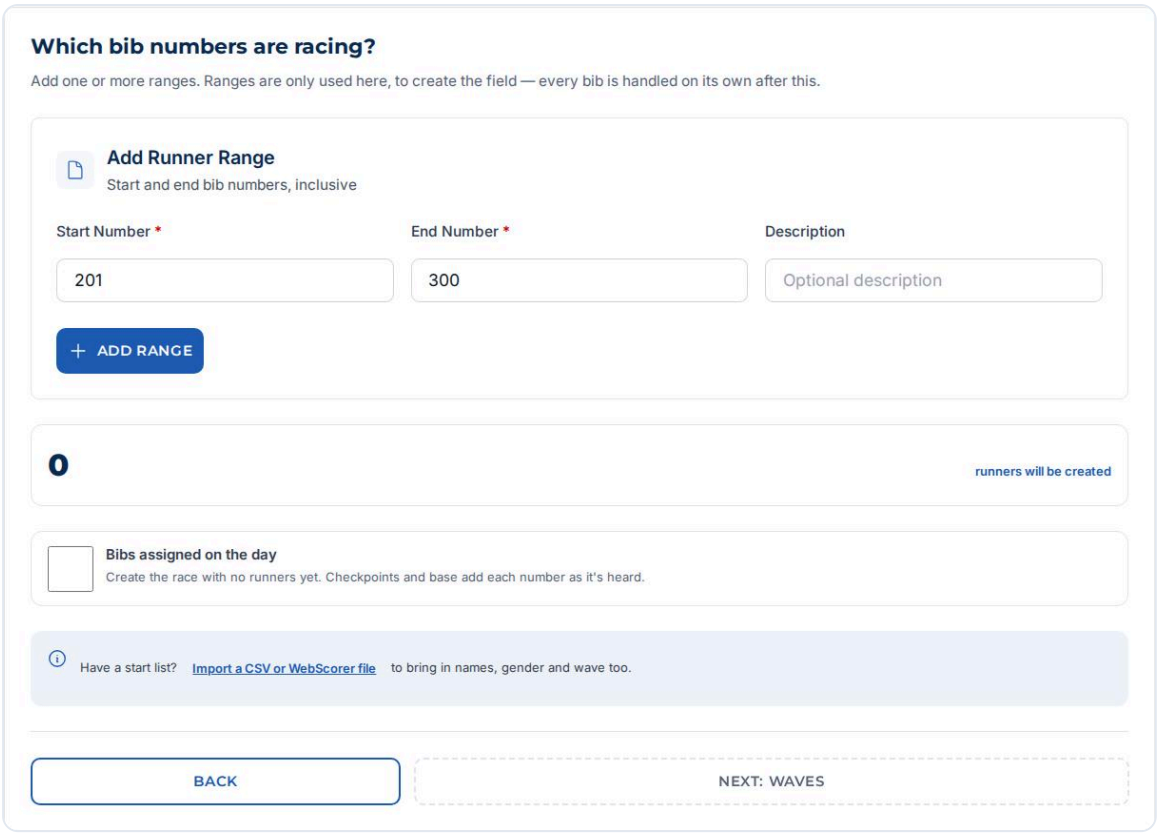

Runner name/gender section appears after adding a range

After a race director adds a bib number range on Step 3 of the setup wizard, an optional section appears for entering runner first names, last names, and gender. This is purely optional — races can be tracked without personal data.

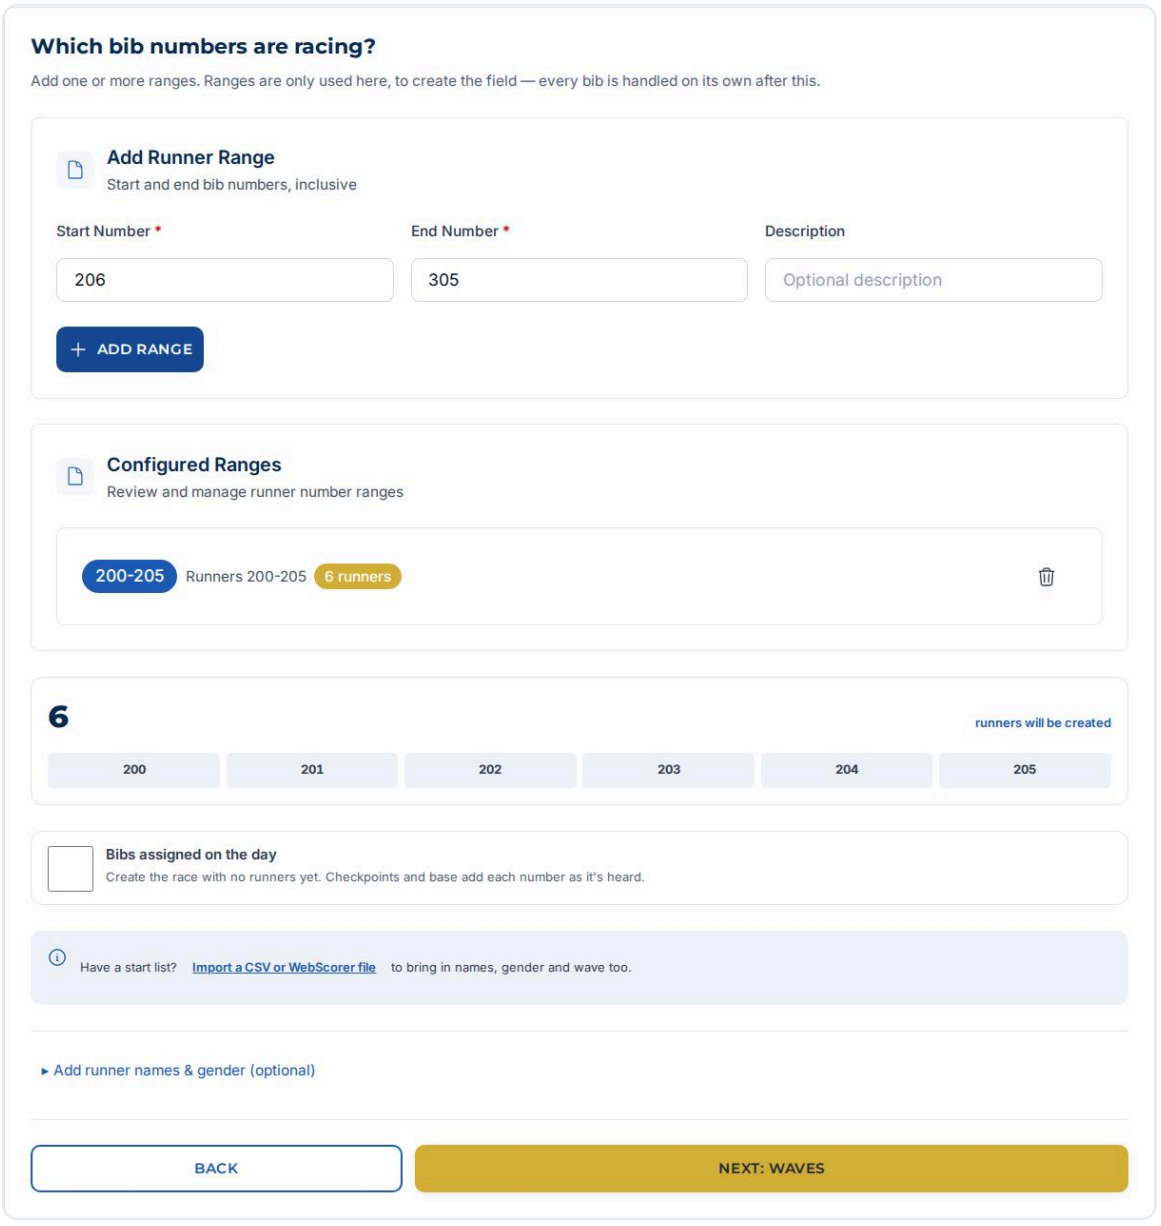

Navigate to race setup wizard

Fill in Race Details and advance to Step 3

Remove default range and add range 200-205

Check that optional names section toggle is visible

Which bib numbers are racing?

Add one or more ranges. Ranges are only used here, to create the field — every bib is handled on its own after this.

Add Runner Range

Start and end bib numbers, inclusive

Start Number *	End Number *	Description
206	305	Optional description

+ ADD RANGE

Configured Ranges

Review and manage runner number ranges

200-205 Runners 200-205 6 runners

6 runners will be created

200	201	202	203	204	205

☐ **Bibs assigned on the day**

Create the race with no runners yet. Checkpoints and base add each number as it's heard.

ⓘ Have a start list? Import a CSV or WebScorer file to bring in names, gender and wave too.

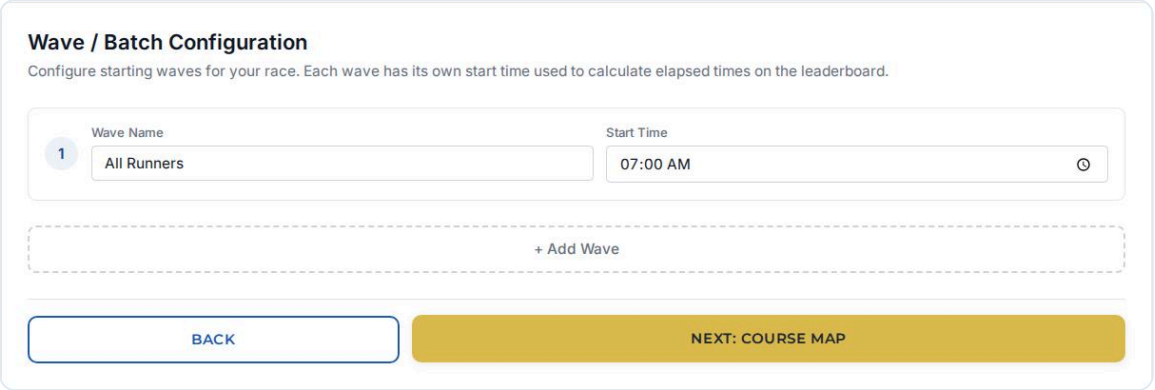

▸ Add runner names & gender (optional)

BACK NEXT: WAVES

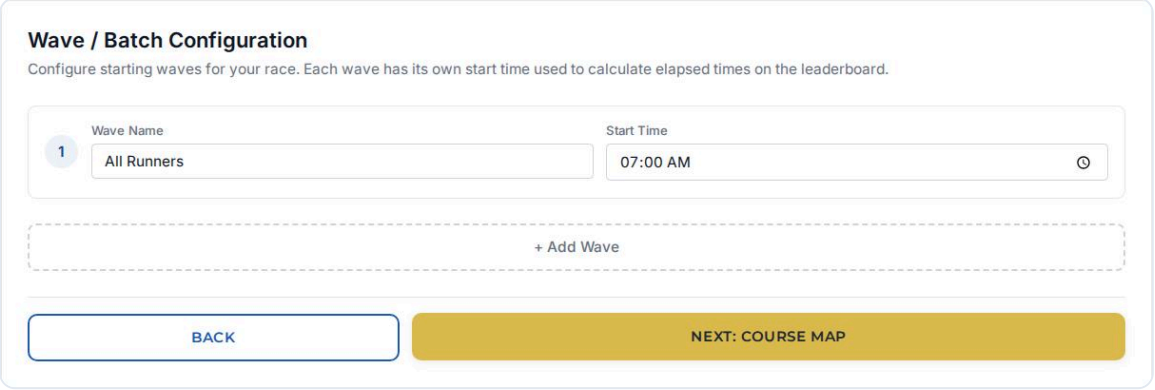

Waves step shows default wave and allows adding more

Step 4 of the race setup wizard is the Waves step, which groups runners into separate start batches. By default one wave is provided. A race director can add a second wave using the Add Wave button.

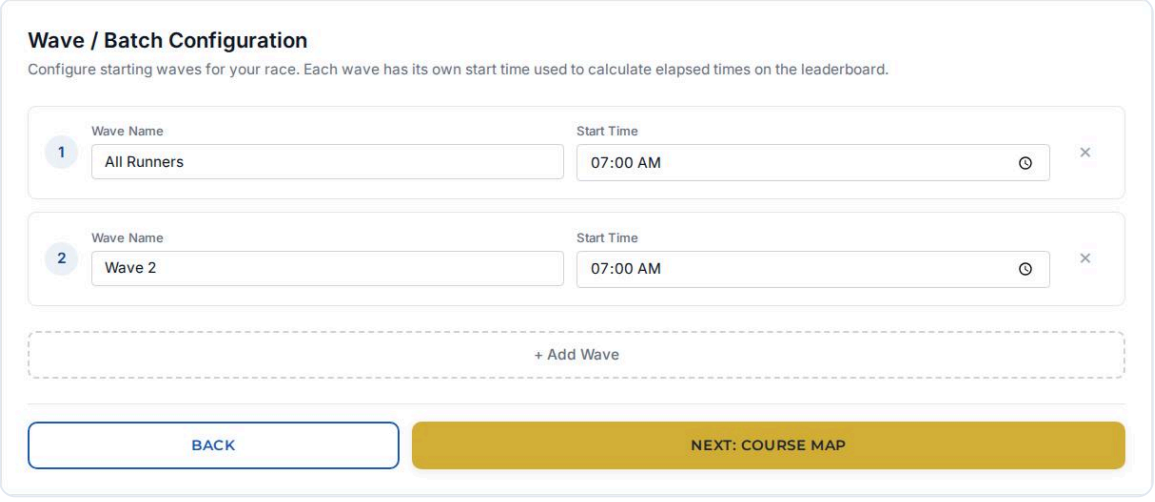

Navigate through setup wizard to the Waves step

Confirm Waves step heading and at least one wave row

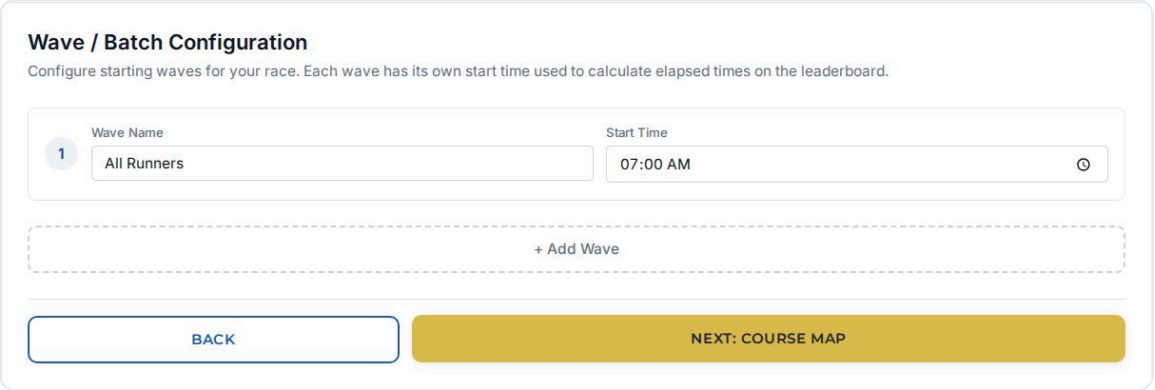

Click "+ Add Wave" to add a second wave

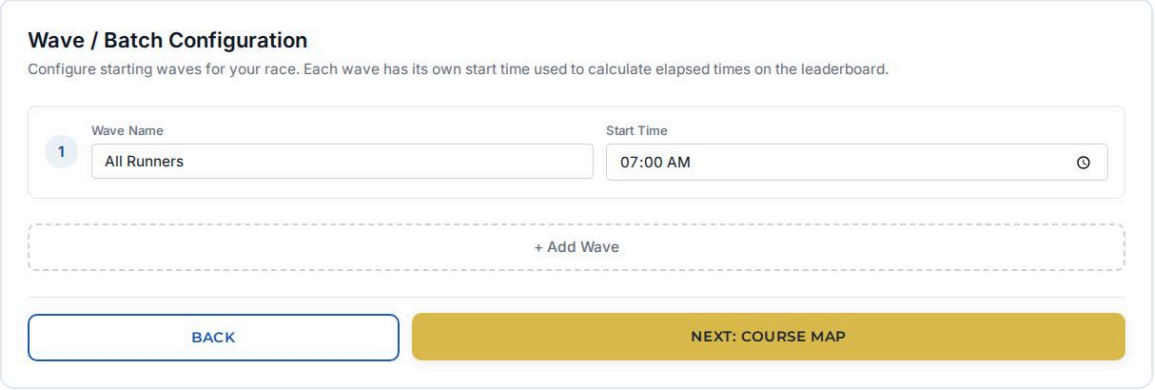

Wave name and time fields are editable and save

A race director can give each wave a custom name (e.g. "Wave B") and a specific start time (e.g. "07:30"). These are saved to the database so checkpoint volunteers know when each wave started.

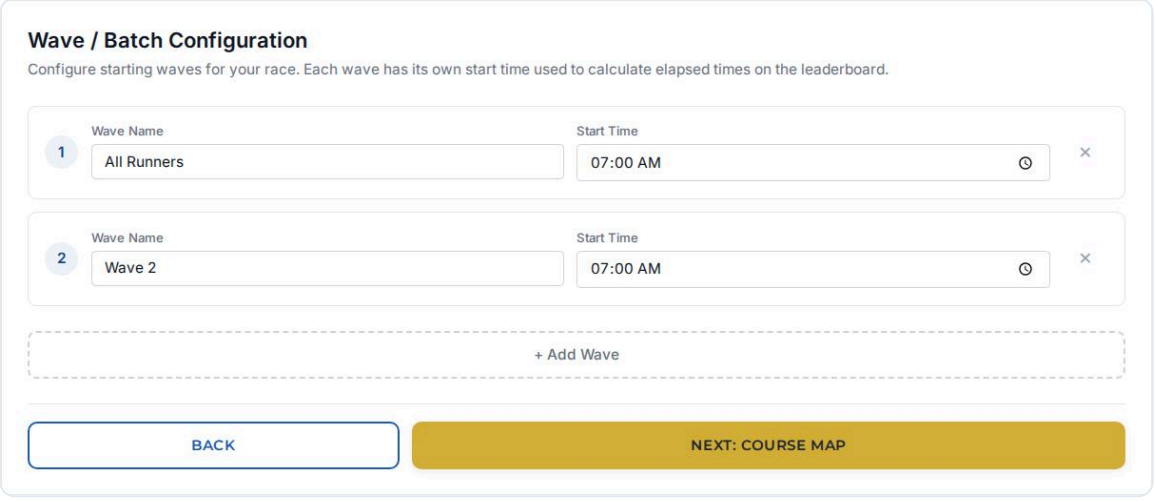

Navigate through setup wizard to the Waves step

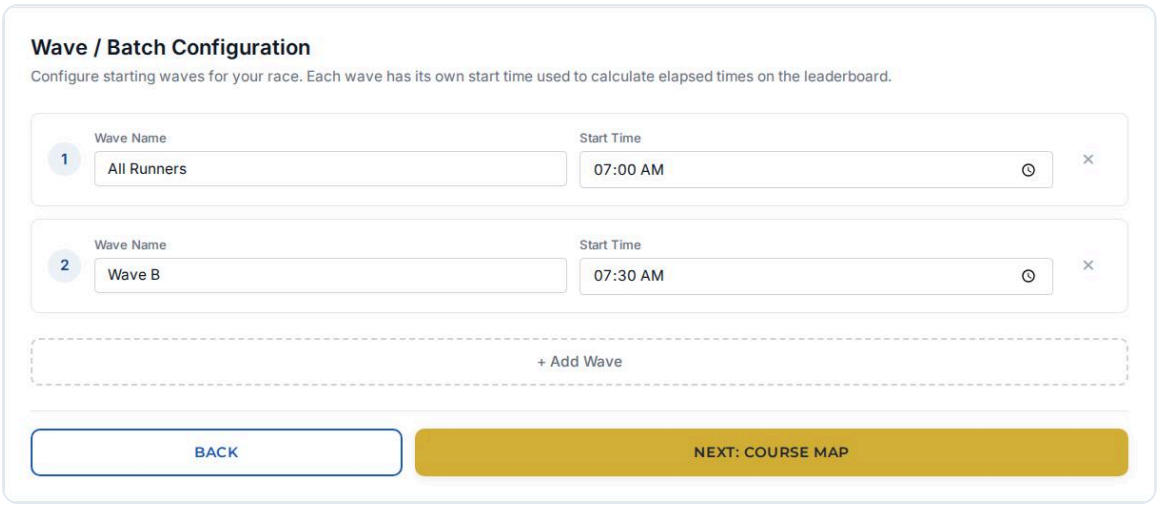

Confirm "+ Add Wave" button is available

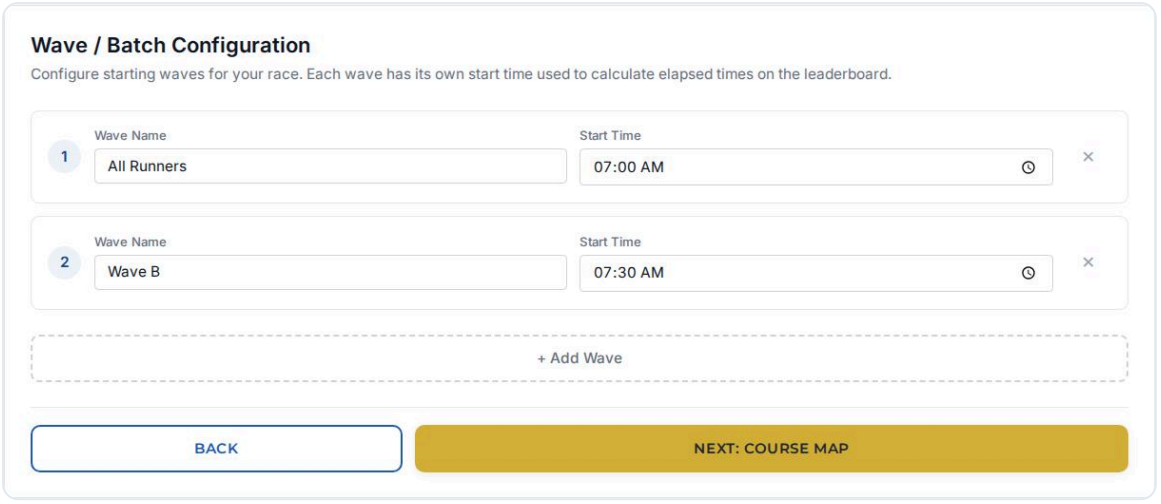

Add a second wave

Set second wave name to "Wave B" and start time to "07:30"

Verify "Wave B" appears in the wave name input

Race setup fits a phone

Runner setup at 390 px — the range row fits; Back and Next on one line

Which bib numbers are racing?

Add one or more ranges. Ranges are only used here, to create the field — every bib is handled on its own after this.

Add Runner Range

Start and end bib numbers, inclusive

Start Number *

160

End Number *

259
