RACE DIRECTOR

Setting Up & Managing a Race

Everything a race director does — from first opening the app to launching checkpoint and base station modules for volunteers.

👤 **ABOUT THIS JOURNEY**

Alex — Alex is a race director preparing for a trail running event with 15 runners and 3 checkpoints. Alex sets up the race the day before, then on race morning opens the app to confirm everything is in order before handing devices to the volunteer teams.

1 Open the App

home page module cards are all accessible when no operation is active

When the app is idle on the home screen and no operation is in progress, all three module cards — Checkpoint Operations, Base Station, and Race Maintenance — should be enabled and ready to tap. This test confirms none of them are accidentally disabled.

Home page — all module cards visible and enabled

2 Configure Settings

opens and closes the Settings modal

Tapping the settings cog in the top-right corner should open the settings panel. Pressing the Escape key (or tapping close) should dismiss it cleanly. This test confirms both actions work.

Home — tap Settings cog button (aria-label Settings)

CLICK

WHERE: The cog (⚙) icon in the top-right corner of the screen

WHY: *Opens the Settings panel where you can personalise the display — dark mode, font size, and status colours.*

Settings modal — panel open with customisation options

OBSERVE

WHERE: The settings options: Dark Mode toggle, font size slider, and colour pickers

WHY: *All preferences are saved automatically. Changes take effect immediately so you can preview them before closing.*

Settings modal — closed after pressing X button

CLICK

WHERE: The × (close) button at the top-right of the Settings panel, or press Escape

WHY: *Closes the panel. Your preferences are already saved — there is no separate Save button.*

toggles dark mode on and off

The dark mode toggle in settings switches the app between a light colour scheme and a dark one. This test turns dark mode on, confirms the dark theme is applied, then turns it back off and confirms the light theme is restored.

Home — open Settings modal

CLICK

WHERE: The cog (⚙) icon in the top-right corner

WHY: *Open settings to access the Dark Mode toggle.*

Settings modal — Theme control shows Light, Dark and Sunlight

Dark mode ON — html element gains "dark" class

CLICK

WHERE: The Dark Mode toggle switch to enable it

WHY: *The app immediately switches to the dark colour scheme. All screens — not just the home screen — use the dark theme.*

Dark mode OFF — "dark" class removed from html element

CLICK

WHERE: The Dark Mode toggle again to disable it

WHY: *Switches back to the light theme. Toggle at any time — the preference is saved between sessions.*

settings persist after closing and reopening the modal

Changes made in settings should be saved and remembered. If dark mode is turned on and the settings panel is closed then reopened, dark mode should still be on — the preference should not reset.

Home — open Settings modal

CLICK

WHERE: The cog (⚙) icon

WHY: *Open settings to make a change that should persist.*

Settings modal — choose Dark theme and save

Home — reopen Settings modal

CLICK

WHERE: The cog (⚙) icon again

WHY: *Reopen settings to verify the preference was not lost when the panel closed.*

Settings modal — Dark theme is still selected

3 Create a Race

⚠ Screenshot data not found for test: "creates a new race from scratch and verifies the overview" — run `make test-e2e` first.

step indicator advances correctly through setup wizard

The race creation wizard has four steps: Template, Race Details, Runner Setup, and Waves. This test checks that the progress indicator at the top updates as you advance through each step, so the race director always knows where they are in the setup process.

Step 1 of 4 — Template: setup wizard opens

👁 **OBSERVE**

WHERE: The step progress indicator at the top of the wizard

WHY: *The indicator shows you exactly where you are in the four-step process. Step 1 (Template) should be highlighted.*

Step 2 of 4 — Race Details: step indicator shows step 2

👁 **OBSERVE**

WHERE: Step indicator — step 2 now active

WHY: *After choosing a template the indicator advances to Step 2. If you need to go back, your data is saved.*

Step 3 of 4 — Runner Setup: step indicator advances to step 3

👁 **OBSERVE**

WHERE: Step indicator — step 3 now active

WHY: *Confirms you are on the Runner Setup step. Add bib ranges here before moving on to Waves.*

back button on step 2 returns to race details with data preserved

If a race director fills in the race name and other details on Step 2 of 4 (Race Details), moves on to Step 3 of 4 (Runner Setup), then clicks Back, all their work should still be there — the race name and other fields must not be wiped out. Nobody should have to retype information just because they went back a step.

Step 1 of 4 — Template: choose Start from Scratch

CLICK

WHERE: "Start from Scratch" card

WHY: *Begin the wizard to demonstrate that going back does not wipe your work.*

Step 2 of 4 — Race Details: fill in race name and details

FILL IN

WHERE: Race Name, Race Date, Start Time fields

ENTER: `Any values — these should survive a Back navigation`

WHY: *Fill in the details to prove they are preserved when you navigate back from Step 3.*

Step 3 of 4 — Runner Setup: navigate forward then press Back

CLICK

WHERE: "Back" button (bottom-left)

WHY: *Simulates a race director who wants to correct a detail after moving forward.*

Step 2 of 4 — Race Details: data preserved after Back

OBSERVE

WHERE: Race Name, Race Date, Start Time fields

WHY: *All the values entered in Step 2 must still be there. Nothing should be lost by navigating back.*

4 Manage Races

race management page lists created races

The Race Management page is the race director's central hub where all races are listed. This test confirms that a race created earlier in the test suite appears on that page.

Race Management — page lists all created races

OBSERVE

WHERE: The list of race cards on the Race Management page

WHY: *Every race you have created appears here. Tap a race name to open its overview, or tap "Create New Race" to add another.*

clicking a race opens its overview

When the race director clicks on a race in the management list, they should be taken to that race's overview page where they can see all the details. This test confirms that navigation works correctly.

Race Management — page with race listed

OBSERVE

WHERE: The race card in the list

WHY: *Identify the race you want to manage.*

Race card — click race name to open overview

CLICK

WHERE: The race name or the "›" arrow on the race card

WHY: *Opens the Race Overview for that race — shows checkpoints, runner counts, and quick-launch buttons for each module.*

Race overview — name and details visible

OBSERVE

WHERE: Race name, date, start time, and the checkpoint / runner summary

WHY: *Confirm all details are correct before race day. This is also where you launch Checkpoint or Base Station operations.*

⚠ Screenshot data not found for test: "creates a second race from the management page" — run `make test-e2e` first.

⚠ Screenshot data not found for test: "race overview shows correct runner and checkpoint counts" — run `make test-e2e` first.

5 Launch Checkpoint & Base Station Modules

navigates from race overview to a checkpoint

From the race overview, a race director can jump straight to any checkpoint's live mark-off screen. This test clicks the Checkpoint 1 link and confirms the checkpoint mark-off screen opens.

Checkpoint view — mark-off screen for CP1 open

👁 **OBSERVE**

WHERE: The runner grid and the "Checkpoint 1" label in the header

WHY: *Confirms the correct checkpoint is open. The volunteer at this checkpoint will use this screen to mark off runners.*

navigates from race overview to base station

From the race overview, a race director can jump straight to the base station. This test clicks the Base Station button on the overview page and confirms the base station operations screen opens.

Navigate directly to base station operations

Base Station — operations screen open

👁 **OBSERVE**

WHERE: The Base Station data entry form

WHY: *The base station operator uses this screen for the entire race. Confirm it loads before handing the device over.*
