RaceTracker — VK4WIP UI validation pack

Every new screen, every event (click or entry), with what the plan says and what the built app showed.
Branch feature/vk4wip-ui · generated 21 Oct 2026, 1:57 pm · 148 events · 14 screens

How to validate

Each event block has: **Plan** (section of IMPLEMENTATION_SPEC.md), **Event** (exactly what was clicked or entered), **Plan says** (wording quoted from the plan — not the developer's own description), **App showed** (evidence read from the running app for that event: the element's text, accessible name, state such as pressed / disabled / invalid, and the computed colour or border where the plan specifies one), **Status line** (any live status or alert text on screen) and a screenshot taken straight after the event. Events whose Plan column says **Fixes A1 … D3** check an item from the validation-fixes brief (docs/design-handoff/VALIDATION_FIXES.md) and quote it. The full plan is reproduced in the appendix.

Suggested prompt for Claude.ai — attach this PDF and say:
"This PDF documents a built UI against the plan in its appendix (IMPLEMENTATION_SPEC.md) and the validation-fixes brief. For every event, compare 'App showed' and the screenshot with 'Plan says' and the referenced plan section. List every mismatch, missing behaviour, styling difference from §3 (colours, buttons, runner states) and accessibility concern, with the event ID and the plan section. Also list plan items (§4, §7, §8) that no event exercises."

Notes for the reviewer. The race is generated for the run (started two hours before the screenshots), so times differ from the plan's 07:47 examples. Base screens were seeded with earlier calls (an hour and half an hour before) including deliberate data problems, so the overdue alert and every data check have something to show. Known, deliberate differences from the plan are listed in DECISIONS.md (e.g. no Start checkpoint, the setup wizard has 5–6 steps, the race list stays on Home). All events were completed by the automation.

Home

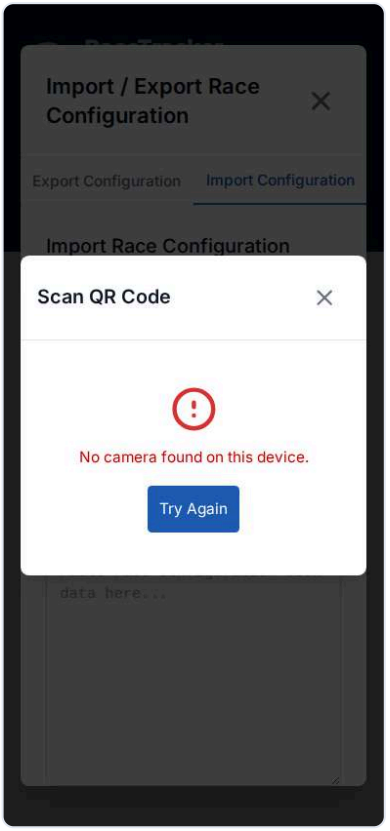

HOME-01 390×844

Plan	§4.1
Event	**Open the app at /**
Plan says	*Navy header: badge, "RaceTracker", "Ipswich & District Radio Club · VK4WIP", "Offline ready" status. Current race card (name, date, checkpoint count, start time). Three role cards (≥76px): Checkpoint, Base station, Race setup — icon tile, title, one-line description, chevron. Primary button at bottom: Scan race QR code (existing import flow). Footer lockup: "Ipswich & District Radio Club · VK4WIP".*
App showed	• Header: "RaceTracker Ipswich & District Radio Club · VK4WIP CURRENT RACE Offline ready Mt Glorious Mountain Trails Wed 21 Oct · 3 checkpoints + finish · start 11:55" • Checkpoint role card: "Checkpoint Mark runners as they pass your station" • Role card heights: Checkpoint 94px, Base station 94px, Race setup 94px
Result	☐ Matches plan ☐ Issue: _____

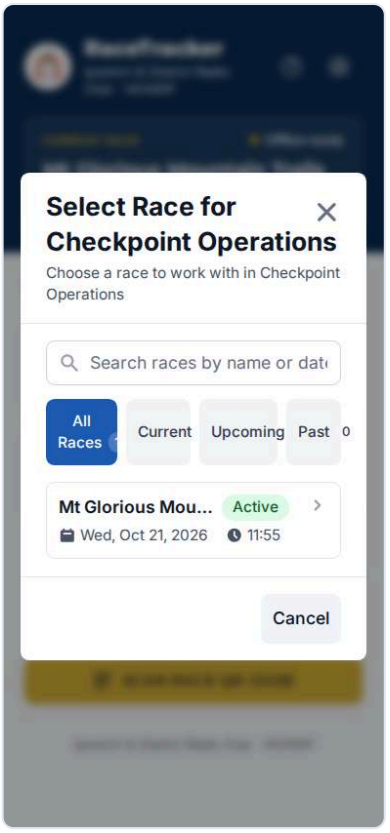

HOME-02 390×844

Plan	§4.1
Event	**Click "Scan race QR code"**
Plan says	*Opens the existing import flow (QR scanner).*
App showed	• Dialog: "Import / Export Race Configuration Export Configuration Import Configuration Import Race Configuration Upload a JSON file, paste the race configuration data bel…" · name "Import / Export" · role=dialog
Result	☐ Matches plan ☐ Issue: _____

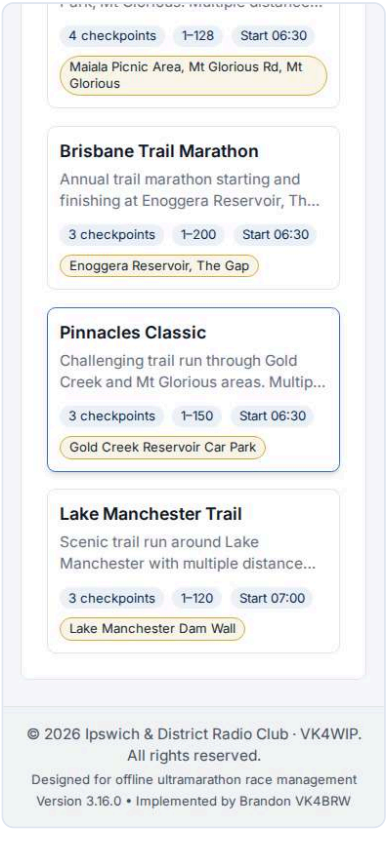

HOME-03 390×844

Plan	§4.1
Event	**Close the scanner, then click the "Checkpoint" role card**
Plan says	*Role cards keep the existing navigation (choose race, then checkpoint). Navigation protection unchanged.*
App showed	• URL: / • Dialog heading: "Select Race for Checkpoint Operations"
Result	☐ Matches plan ☐ Issue: _____

HOME-04 390×844

Plan	Fixes C6
Event	**Open Race setup and scroll to the footer**
Plan says	*Footer text "Ipswich & District Radio Club · VK4WIP" (not "VK4WIP Radio Club").*
App showed	• Footer: "© 2026 Ipswich & District Radio Club · VK4WIP. All rights reserved."
Result	☐ Matches plan ☐ Issue: _____

Settings

SET-01 390×844

Plan §4.4

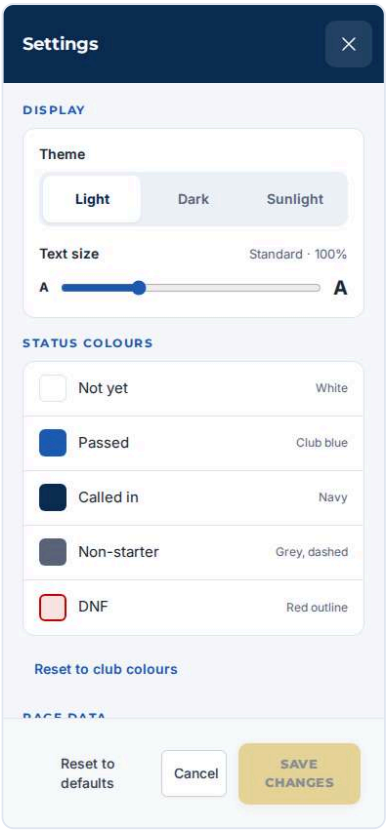

Event **Home → click the Settings (cog) button**

Plan says *Sections: Display (Theme segmented: Light / Dark / Sunlight; text-size slider), Status colours (rows with swatch, name, description; "Reset to club colours"), Race data (Share or import race config).*

App showed
- Section headings: DISPLAY · STATUS COLOURS · RACE DATA · MORE OPTIONS · DANGER ZONE · Clear database
- Theme: Light: "Light" · aria-pressed=true

Status line Clear database Permanently deletes all races, runners and settings on this device. This cannot be undone. Clear database

Result ☐ Matches plan ☐ Issue: _____

SET-02 390×844

Plan §4.4

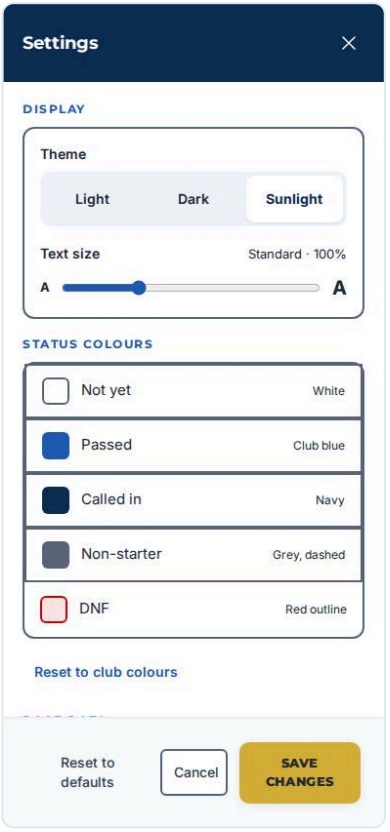

Event **Click Theme → "Sunlight"**

Plan says *Sunlight = new high-contrast theme option (pure white bg, ink text, thicker borders).*

App showed
- Theme: Sunlight: "Sunlight" · aria-pressed=true
- Theme classes on <html>: touch-optimized sunlight-mode
- Body background: rgb(255, 255, 255)

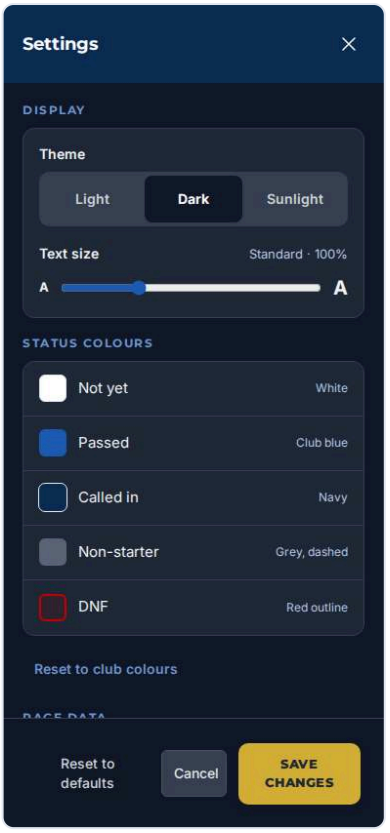

Status line Clear database Permanently deletes all races, runners and settings on this device. This cannot be undone. Clear database

Result ☐ Matches plan ☐ Issue: _____

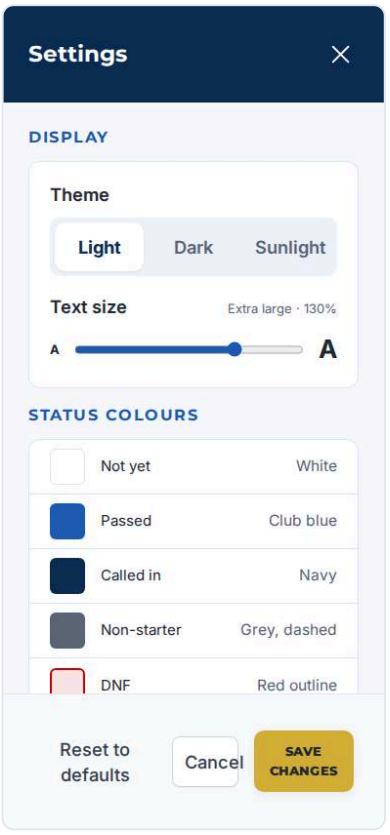

SET-03 390×844

Plan	§4.4 / G6 / Fixes C3
Event	**Click Theme → "Dark"**
Plan says	*Dark mode: muted labels, the "Reset to club colours" link and "Standard · 100%" at least 4.5:1; Called-in swatch has a light outline.*
App showed	• Theme classes on <html>: touch-optimized dark • Section heading: "DISPLAY" · colour rgb(111, 150, 208) • "Reset to club colours": "Reset to club colours" · colour rgb(111, 150, 208) • Text size label: "Standard · 100%" · colour rgb(185, 203, 230) • axe colour-contrast: no violations
Status line	Clear database Permanently deletes all races, runners and settings on this device. This cannot be undone. Clear database
Result	☐ Matches plan ☐ Issue: _____

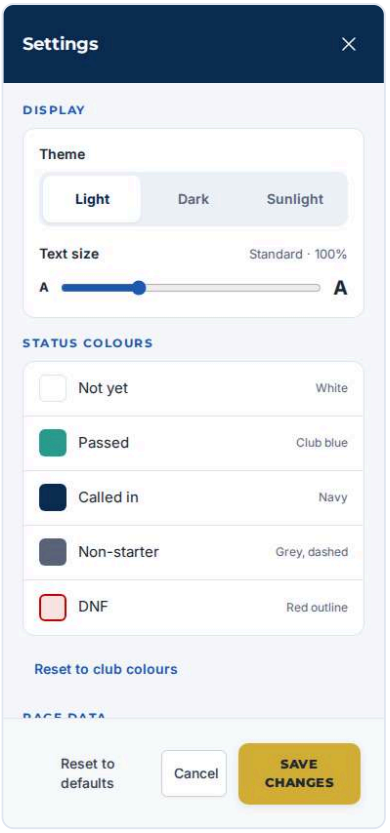

SET-04 390×844

Plan	§3.2 / §4.4
Event	**Click "Light", then drag Text size to 130%**
Plan says	*Keep the existing --font-scale setting; all sizes scale with it.*
App showed	• --font-scale: 1.3 • Text size label: "Extra large · 130%"
Status line	Clear database Permanently deletes all races, runners and settings on this device. This cannot be undone. Clear database
Result	☐ Matches plan ☐ Issue: _____

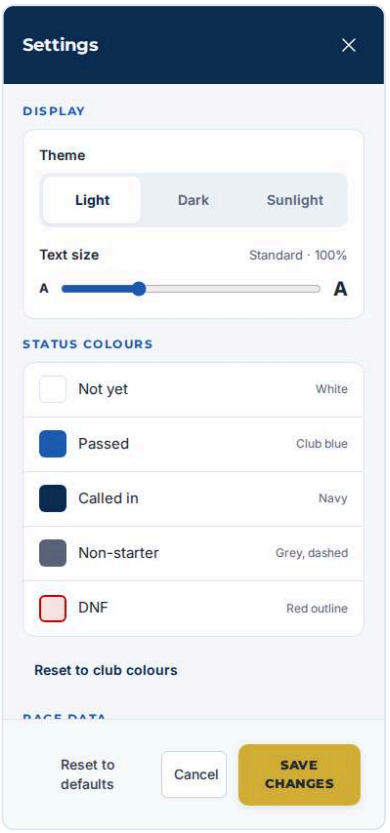

SET-05 390×844

Plan	§4.4 / G7
Event	**Change the "Passed" colour to #2a9d8f with its swatch**
Plan says	*Users may still recolour in Settings.*
App showed	• --color-status-passed: 42 157 143
Status line	Clear database Permanently deletes all races, runners and settings on this device. This cannot be undone. Clear database
Result	☐ Matches plan ☐ Issue: _____

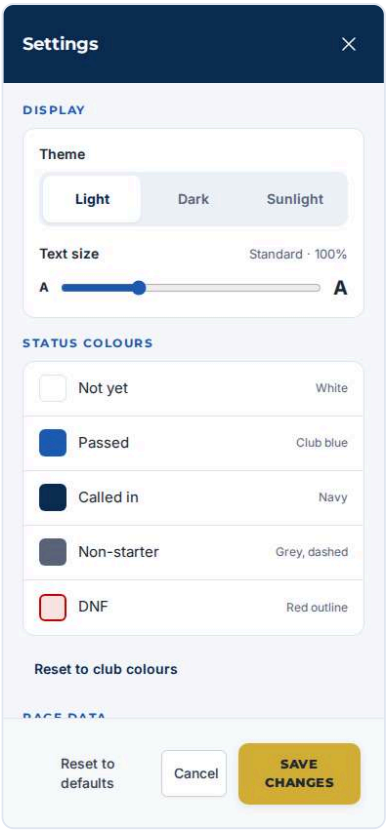

SET-06 390×844

Plan	§4.4
Event	**Click "Reset to club colours"**
Plan says	*Status colours … "Reset to club colours".*
App showed	• --color-status-passed (club blue = 30 92 179): 30 92 179
Status line	Clear database Permanently deletes all races, runners and settings on this device. This cannot be undone. Clear database
Result	☐ Matches plan ☐ Issue: _____

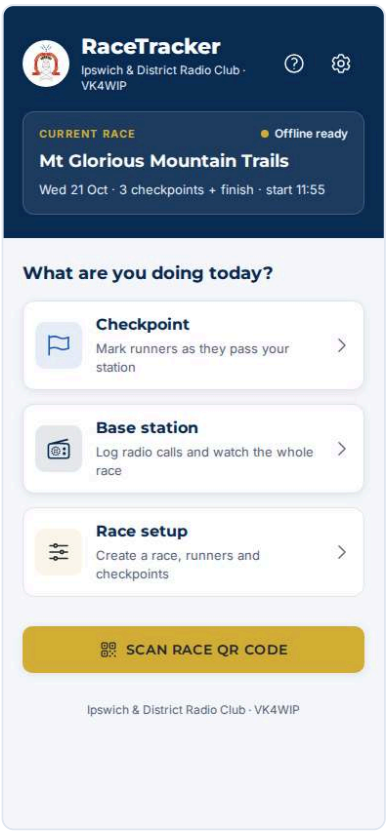

SET-07 390×844

Plan	Fixes C2
Event	**Look at the accessibility toggles**
Plan says	*Settings toggles: club blue when on, border colour when off.*
App showed	• Toggle colours (on/off): false: rgb(224, 230, 240), false: rgb(224, 230, 240), true: rgb(30, 92, 179), false: rgb(224, 230, 240)
Status line	Clear database Permanently deletes all races, runners and settings on this device. This cannot be undone. Clear database
Result	☐ Matches plan ☐ Issue: _____

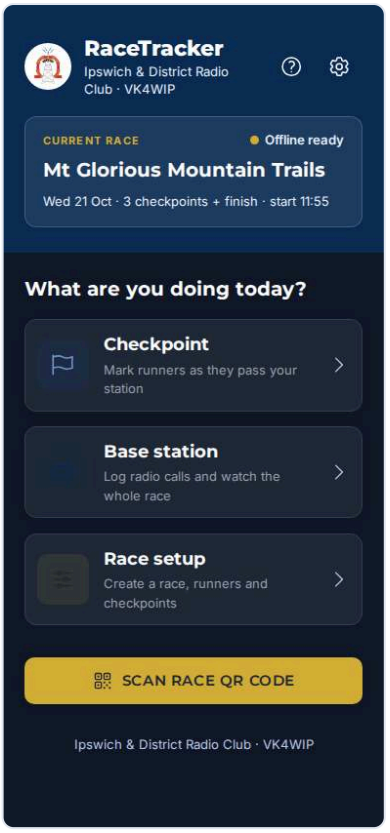

SET-08 390×844

Plan	Fixes D3
Event	**Click "Dark", then "Cancel"**
Plan says	*Settings Cancel undoes the live theme preview.*
App showed	• Theme classes on <html>: touch-optimized
Result	☐ Matches plan ☐ Issue: _____

SET-09 390×844

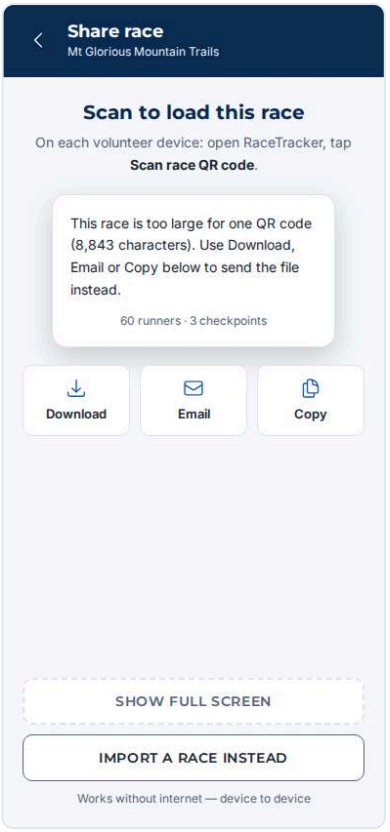

Plan	Fixes D3
Event	**Settings → "Dark" → "Save Changes", then reload the page**
Plan says	*Settings persist after reload.*
App showed	• Theme classes on <html>: dark touch-optimized
Result	☐ Matches plan ☐ Issue: _____

Share race config

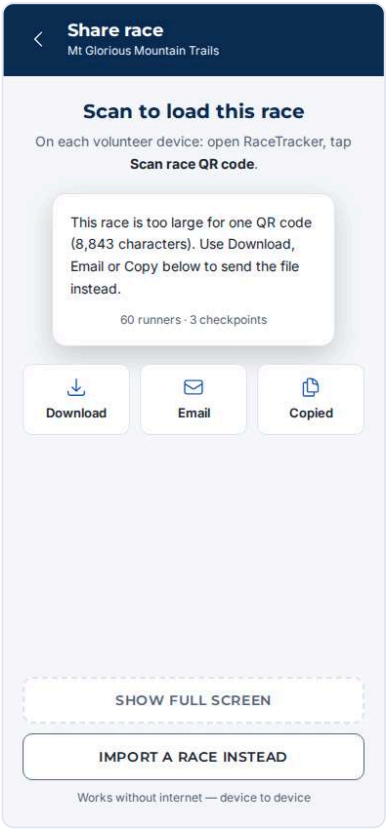

SHARE-01 390×844

Plan	§4.3 / Fixes C1
Event	**Settings → "Light" → Save; Settings → Race data → "Share or import race config"**
Plan says	*Existing QR export: large QR in a white card with shadow, runner/checkpoint count; Download / Email / Copy tiles; primary "Show full screen" (QRDisplayFullscreen). Note "Works without internet — device to device". Locked buttons: dashed border, muted text.*
App showed	• QR card note: "This race is too large for one QR code (8,843 characters). Use Download, Email or Copy below to send the file instead." • Show full screen: "SHOW FULL SCREEN" · disabled · background rgb(255, 255, 255) · border 2px dashed rgb(224, 230, 240) · colour rgb(90, 101, 121)
Status line	Clear database Permanently deletes all races, runners and settings on this device. This cannot be undone. Clear database
Result	☐ Matches plan ☐ Issue: _____

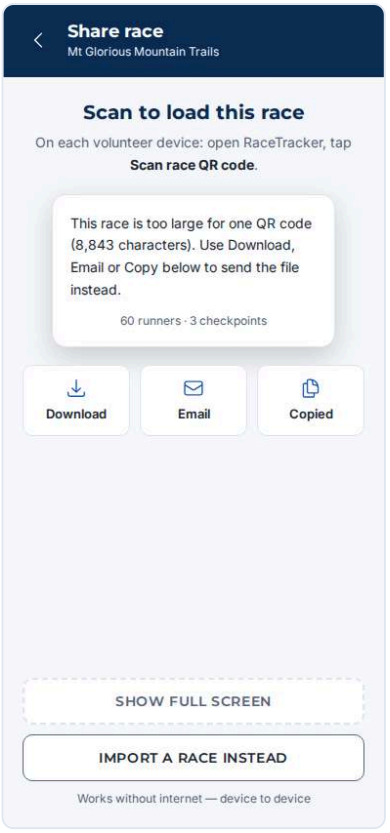

SHARE-02 390×844

Plan	§4.3
Event	**Click the "Copy" tile**
Plan says	*Download / Email / Copy tiles.*
App showed	• Copy tile: "Copied" • Clipboard starts: {"version":"3.0.0","exportDate":"2026-10-21T13:55:21.901Z","
Status line	Clear database Permanently deletes all races, runners and settings on this device. This cannot be undone. Clear database
Result	☐ Matches plan ☐ Issue: _____

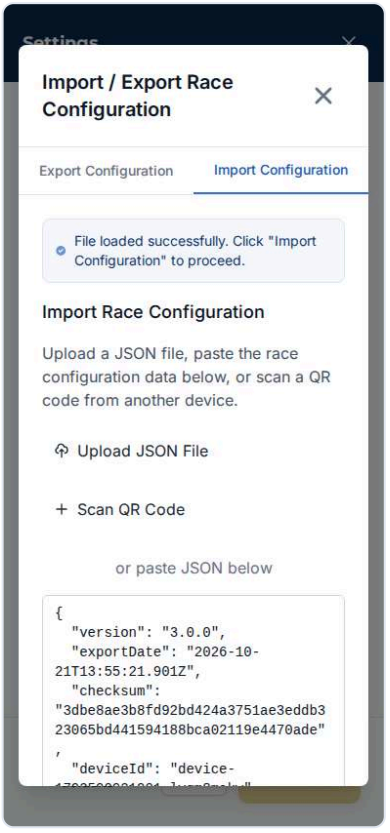

SHARE-03 390×844

Plan	Fixes A7
Event	**Click the "Email" tile (no Web Share on this browser)**
Plan says	*Download the .json file and open mailto: with a short body (instructions only, ≤ 1,800 characters) telling the reader to attach it. The share payload contains no results.*
App showed	• Downloaded: race-setup-Mt-Glorious-Mountain-Trails.json — data: races, runners, checkpoints • mailto: 443 characters — mailto:?subject=Race setup: Mt Glorious Mountain Trails&body=Race setup for Mt Glorious Mountain Trails is attached as race-setup-Mt-Gloriou…
Status line	Clear database Permanently deletes all races, runners and settings on this device. This cannot be undone. Clear database
Result	☐ Matches plan ☐ Issue: _____

SHARE-04 390×844

Plan	Fixes A7
Event	**"Import a race instead" → Import tab → choose a race file the mail app labelled application/octet-stream**
Plan says	*File import accepts by content, not file.type (.json, application/json, application/octet-stream, text/plain, '').*
App showed	• Import message: "File loaded successfully. Click "Import Configuration" to proceed."
Status line	Clear database Permanently deletes all races, runners and settings on this device. This cannot be undone. Clear database
Result	☐ Matches plan ☐ Issue: _____

Race setup

SETUP-01 390×844

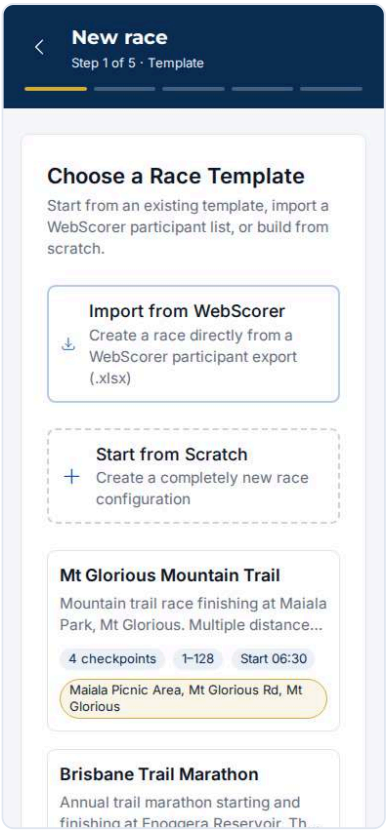

Plan §4.2 / Fixes C7

Event **Open /race-maintenance/setup**

Plan says *Navy header with step and a gold progress bar. Restyle only; keep the wizard. Mt Glorious template per the WICEN brief: start 06:30, checkpoints / distances / operators from spec §10 (bib range unchanged).*

App showed
- Mt Glorious template card: "Mt Glorious Mountain Trail Mountain trail race finishing at Maiala Park, Mt Glorious. Multiple distance options with challenging terrain. 4 checkpoints 1–128 St..."
- Template tag: "4 checkpoints" · background rgb(238, 243, 250) · colour rgb(11, 45, 83)

Result ☐ Matches plan ☐ Issue: _____

SETUP-02 390×844

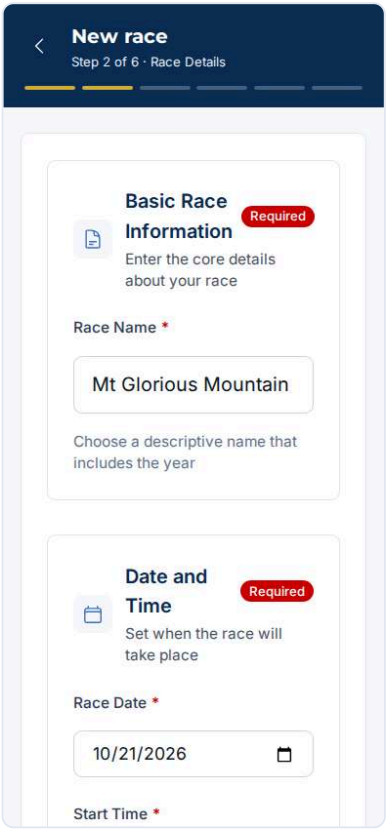

Plan Fixes C7

Event **Click the Mt Glorious template**

Plan says *Start 06:30 (spec §10).*

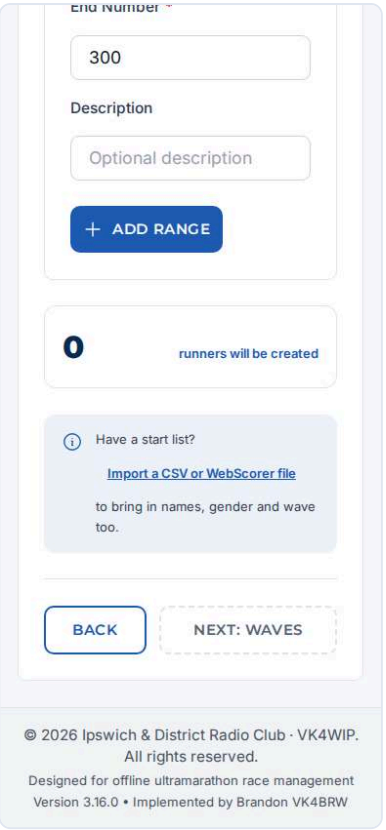

App showed
- Start time: "06:30" · aria-invalid=false
- Checkpoints: "4" · aria-invalid=false

Result ☐ Matches plan ☐ Issue: _____

SETUP-03 390×844

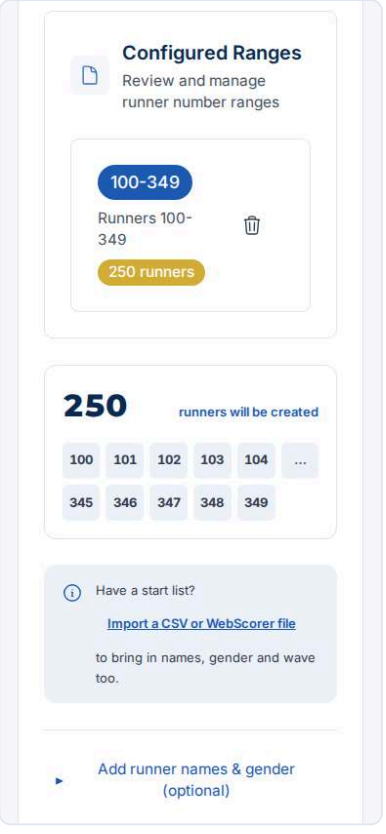

Plan	§4.2
Event	**Back to templates; "Start from Scratch", enter name / date / start time, click Next**
Plan says	*Keep the wizard (Back secondary, Next primary).*
App showed	• Step heading: "Add Runner Range"
Status line	0 runners will be created
Result	☐ Matches plan ☐ Issue: _____

Checkpoint — Mark off

CP-01 390×844

Plan	§4.5 Layout / Fixes B1 B2 C1
Event	**Open /checkpoint/3**
Plan says	*AppBar (checkpoint number, location + operator callsign — two lines rather than an ellipsis) with 3 StatTiles → quick-entry input + gold Mark (locked until a number is typed) → status line → group chips → tile grid. Share batch is a labelled icon in the app bar with a count.*
App showed	• Subtitle: "England Creek Rd & Joyners Ridge Rd · VK4PMC" • Subtitle cut off?: no • Share batch: name "Share batch, 0 runners" · title=Share batch • Mark (empty entry): "MARK" · disabled · border 2px dashed rgb(224, 230, 240) · colour rgb(90, 101, 121)
Status line	Tap a number as the runner passes. Tap again to fix its time.
Result	☐ Matches plan ☐ Issue: _____

CP-02 390×844

Plan	§4.5 Behaviour 1
Event	**Tap tile 101 (not passed)**
Plan says	*Tap a not-passed tile → mark passed at now.*
App showed	• Tile 101: "101 13:55" · name "Runner 101, 13:55" · background rgb(30, 92, 179) • Status line: "101 marked at 13:55" · aria-live=polite
Status line	101 marked at 13:55
Result	☐ Matches plan ☐ Issue: _____

CP-03 390×844

Plan	§4.5 Behaviour 6
Event	**Type "103, 104 105" in quick entry and press Enter**
Plan says	*Quick entry accepts multiple numbers, marks each at now, message "3 runners marked at 07:47".*
App showed	• Status line: "3 runners marked at 13:55" · aria-live=polite • Share batch: "4" · name "Share batch, 4 runners" · title=Share batch
Status line	3 runners marked at 13:55 · 3 runners marked UNDO
Result	☐ Matches plan ☐ Issue: _____

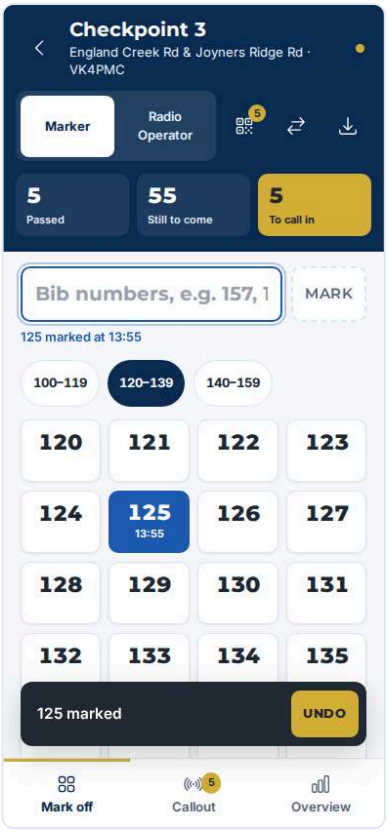

CP-04 390×844

Plan	G1 / §4.5 Behaviour 6
Event	**Type "110-115 999 101" and press Enter**
Plan says	*Individual numbers only. Unknown / already-marked numbers are not marked.*
App showed	• Status line: "No new runners — 999 not at this checkpoint · 101 already marked · type each number on its own" · aria-live=polite
Status line	No new runners — 999 not at this checkpoint · 101 already marked · type each number on its own · 3 runners marked UNDO
Result	☐ Matches plan ☐ Issue: _____

CP-05 390×844

Plan	§4.5 Behaviour 6
Event	**Type "125" and press Enter**
Plan says	*Jumps the grid to the group of the first number.*
App showed	• Status line: "125 marked at 13:55" · aria-live=polite • Group chip 120–139: "120–139" · aria-pressed=true
Status line	125 marked at 13:55 · 125 marked UNDO
Result	☐ Matches plan ☐ Issue: _____

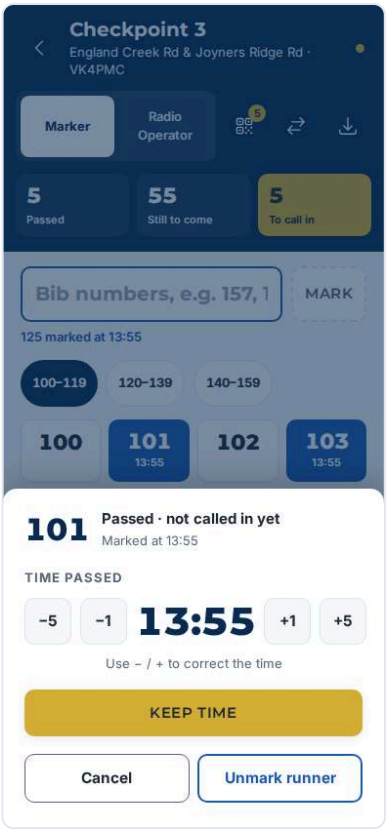

CP-06 390×844

Plan	§4.5
Event	**Tap group chip "100–119"**
Plan says	*Group chips (20 per group).*
App showed	• Group chip 100–119: "100–119" · aria-pressed=true · background rgb(11, 45, 83)
Status line	125 marked at 13:55 · 125 marked UNDO
Result	☐ Matches plan ☐ Issue: _____

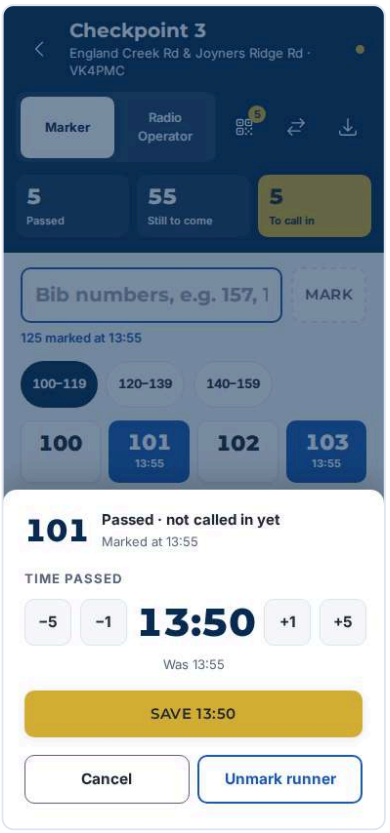

CP-07 390×844

Plan	§4.5 Behaviour 2–3
Event	**Tap tile 101 again (passed)**
Plan says	*Edit sheet: bib, "Passed · not called in yet", "Marked at HH:MM", TimeStepper, Save HH:MM (or "Keep time"), Unmark runner, Cancel.*
App showed	• Sheet: "101 Passed · not called in yet Marked at 13:55 TIME PASSED −5 −1 13:55 +1 +5 Use − / + to correct the time KEEP TIME Cancel Unmark runner" · role=dialog • Primary: "KEEP TIME"
Status line	125 marked at 13:55 · 125 marked UNDO · 13:55
Result	☐ Matches plan ☐ Issue: _____

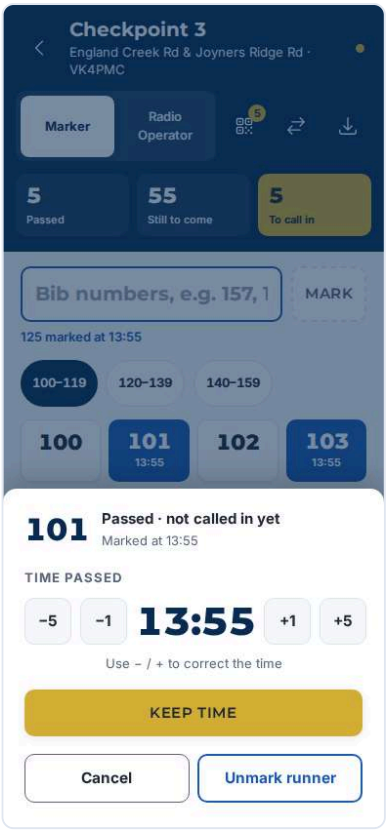

CP-08 390×844

Plan	§3.5 TimeStepper
Event	**In the sheet tap "−5"**
Plan says	*Primary changes to "Save HH:MM"; "Was HH:MM" note.*
App showed	• Primary: "SAVE 13:50" • Note: "Was 13:55"
Status line	125 marked at 13:55 · 125 marked UNDO · 13:50
Result	☐ Matches plan ☐ Issue: _____

CP-09 390×844

Plan	§3.5 TimeStepper / Fixes B4
Event	**Tap "+5" three times**
Plan says	*Clamp to now. Back at the original minute the button reads "Keep time" and the "Was" note is hidden.*
App showed	• Primary: "KEEP TIME" • "Was" note: hidden
Status line	125 marked at 13:55 · 125 marked UNDO · 13:55
Result	☐ Matches plan ☐ Issue: _____

CP-10 390×844

Plan	§4.5 Behaviour 3
Event	**Tap "−5" twice, then "Save HH:MM"**
Plan says	*Save changes the time; status line confirms.*
App showed	• Status line: "101 time changed to 13:45" · aria-live=polite • Tile 101: "101 13:45" · name "Runner 101, 13:45"
Status line	101 time changed to 13:45 · 101 time changed UNDO
Result	☐ Matches plan ☐ Issue: _____

CP-11 390×844

Plan	§4.5 Behaviour 4
Event	**Tap tile 103 → "Unmark runner"**
Plan says	*Tile becomes "unmarked earlier" (dashed blue, was HH:MM); UndoBar "103 unmarked · Undo".*
App showed	• Tile 103: "103 was 13:55" · name "Runner 103, was 13:55" · border 2px dashed rgb(30, 92, 179) • Undo bar: "103 unmarked UNDO" · role=status
Status line	103 unmarked UNDO
Result	☐ Matches plan ☐ Issue: _____

CP-12 390×844

Plan	§4.5 Behaviour 4 / G5
Event	**Tap "Undo" on the undo bar**
Plan says	*Undo restores the original record exactly.*
App showed	• Tile 103: "103 13:55" · name "Runner 103, 13:55"
Status line	103 restored at 13:55
Result	☐ Matches plan ☐ Issue: _____

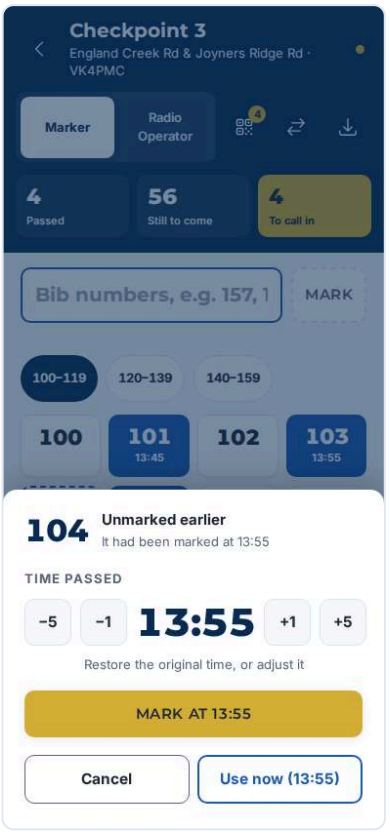

CP-13 390×844

Plan	§4.5 Behaviour 4 / Fixes D3
Event	**Tap tile 104 → "Unmark runner", wait 6.5 s**
Plan says	*Tile becomes "unmarked earlier"; Undo auto-dismisses after ~6 s.*
App showed	• Tile 104: "104 was 13:55" · name "Runner 104, was 13:55" · border 2px dashed rgb(30, 92, 179) • Undo bar after 6.5 s: gone
Result	☐ Matches plan ☐ Issue: _____

CP-14 390×844

Plan	§4.5 Behaviour 5
Event	**Tap tile 104 (unmarked earlier)**
Plan says	*Restore mode: "Unmarked earlier · It had been marked at 07:37", primary Mark at 07:37, secondary Use now (HH:MM).*
App showed	• Sheet: "104 Unmarked earlier It had been marked at 13:55 TIME PASSED −5 −1 13:55 +1 +5 Restore the original time, or adjust it MARK AT 13:55 Cancel Use now (13:55)" · role=dialog
Status line	13:55
Result	☐ Matches plan ☐ Issue: _____

CP-15 390×844

Plan	§4.5 Behaviour 5
Event	**Tap "Mark at HH:MM"**
Plan says	*Restores the original time.*
App showed	• Status line: "104 marked at 13:55" · aria-live=polite • Tile 104: "104 13:55" · name "Runner 104, 13:55"
Status line	104 marked at 13:55 · 104 marked UNDO
Result	☐ Matches plan ☐ Issue: _____

CP-16 390×844

Plan	§4.5 Behaviour 7 / Fixes B3
Event	**In Overview mark 119 DNS, back to Mark off, scroll the grid to the bottom, tap tile 119**
Plan says	*DNS/DNF tiles are not editable here. The quick-entry bar and status line stay in view while the grid scrolls.*
App showed	• Status line: "119 is DNS — change it in Overview" · aria-live=polite • Status line in view: yes
Status line	119 is DNS — change it in Overview
Result	☐ Matches plan ☐ Issue: _____

CP-17 390×844

Plan	Accessibility (Fixes D3)
Event	**Tap tile 101, press Tab 12 times, then Escape**
Plan says	*Sheets trap focus and close on Escape.*
App showed	• Focus inside the sheet after 12 Tabs: yes • Sheet after Escape: closed
Status line	119 is DNS — change it in Overview
Result	☐ Matches plan ☐ Issue: _____

Checkpoint — Callout sheet

CO-01 390×844

Plan §4.6 / Fixes B1

Event **Mark 107 108 109, then tap the "Callout" tab**

Plan says *Title "CP3 · Callout", subtitle "VK4PMC → VK4WIP · 147.225". Call-due banner when ≥ 5 waiting or oldest ≥ 5 min. Next call card with one white card per pending block. Read out + Base copied — mark sent.*

App showed
- Title: "CP3 · Callout"
- Subtitle: "VK4PMC → VK4WIP · 147.225"
- Call due: "Call due — 8 waiting, oldest 10 min" · role=status
- Pending block: "Common time 13:45 · 1 101"

Status line Call due — 8 waiting, oldest 10 min

Result ☐ Matches plan ☐ Issue: _____

CO-02 390×844

Plan §4.6

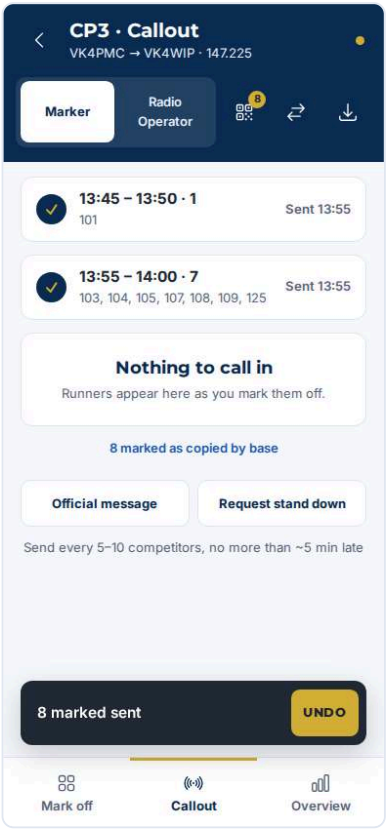

Event **Tap "Base copied — mark sent"**

Plan says *Marks every pending runner called in; called-in blocks collapse to one compact row.*

App showed
- Callout badge: gone (nothing left to call in)
- Sent row: "Sent 13:55"

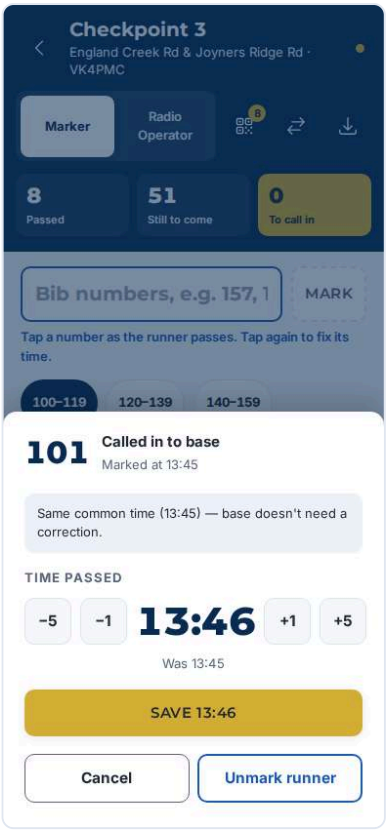

Status line 8 marked as copied by base · 8 marked sent UNDO

Result ☐ Matches plan ☐ Issue: _____

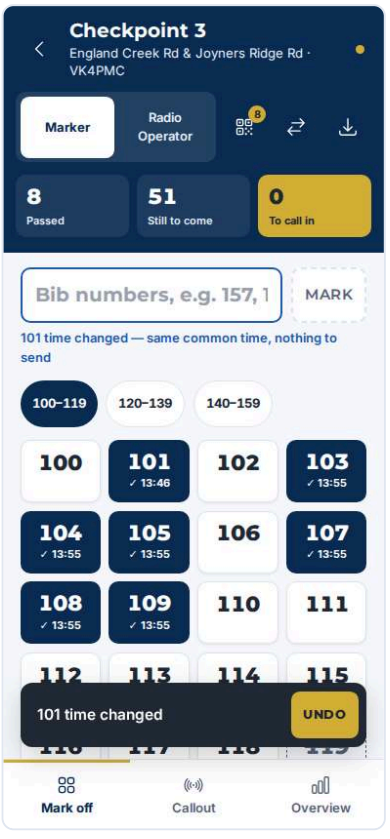

CO-03 390×844

Plan	Fixes A3
Event	**Mark off → tap 101 (called in) → move it one minute inside its 5-minute block**
Plan says	*Same block → no correction. Sheet note "Same common time (HH:MM) — base doesn't need a correction."*
App showed	• Note: "Same common time (13:45) — base doesn't need a correction." • Correction warning: not shown
Status line	Tap a number as the runner passes. Tap again to fix its time. · 13:46
Result	☐ Matches plan ☐ Issue: _____

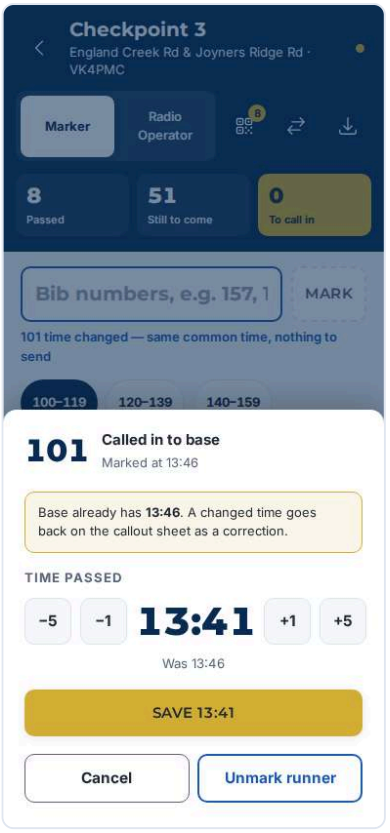

CO-04 390×844

Plan	Fixes A3
Event	**Tap "Save HH:MM"**
Plan says	*Keep calledIn, no correction, no ✎. Status line "101 time changed — same common time, nothing to send".*
App showed	• Status line: "101 time changed — same common time, nothing to send" · aria-live=polite • Tile 101: "101 ✓ 13:46" · name "Runner 101, ✓ 13:46" • Callout badge: none
Status line	101 time changed — same common time, nothing to send · 101 time changed UNDO
Result	☐ Matches plan ☐ Issue: _____

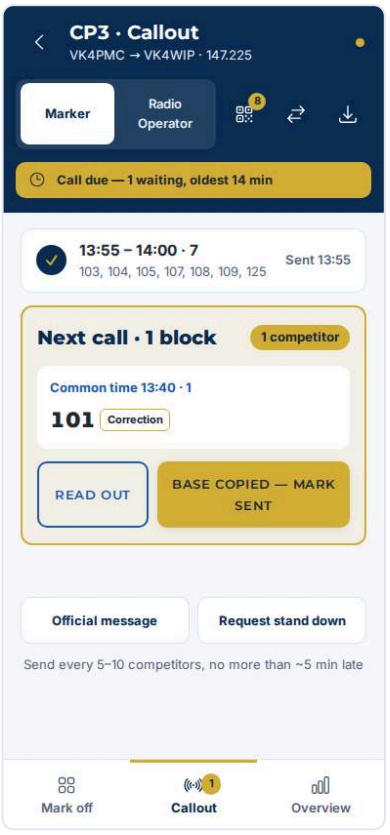

CO-05 390×844

Plan	§4.5 Behaviour 3
Event	**Tap 101 again → "−5"**
Plan says	*Block changes → warning box "Base already has 07:31. A changed time goes back on the callout sheet as a correction."*
App showed	• Warning: "Base already has 13:46. A changed time goes back on the callout sheet as a correction." · background rgba(212, 175, 55, 0.1) · border 1px solid rgb(212, 175, 55)
Status line	101 time changed — same common time, nothing to send · 101 time changed UNDO · 13:41
Result	☐ Matches plan ☐ Issue: _____

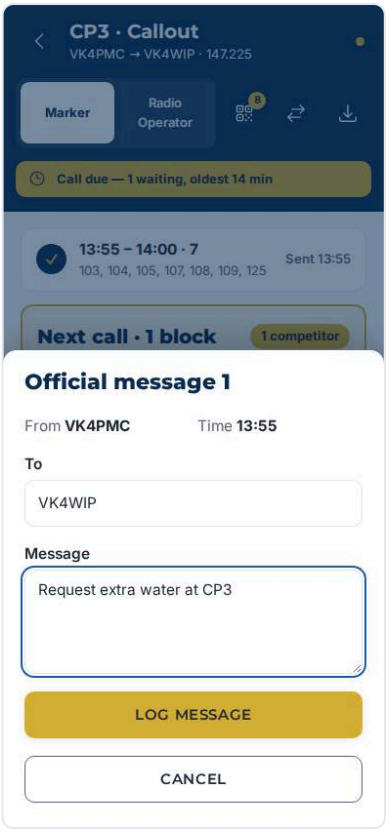

CO-06 390×844

Plan	§4.5 Behaviour 3 / §4.6
Event	**Tap "Save HH:MM", then the "Callout" tab**
Plan says	*Saving sets correction = true; tile shows ✎; corrections appear in the pending list tagged "Correction".*
App showed	• Pending block: "Common time 13:40 · 1 101 Correction"
Status line	Call due — 1 waiting, oldest 14 min
Result	☐ Matches plan ☐ Issue: _____

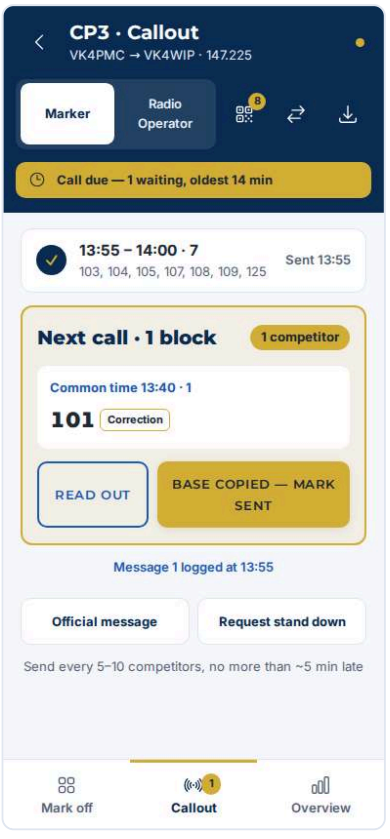

CO-07 390×844

Plan	§4.6
Event	**Tap "Official message", type a message**
Plan says	*Official message … (plain buttons; v1 can open a simple notes modal / log entry).*
App showed	• Dialog: "Official message 1" • Message: "Request extra water at CP3"
Status line	Call due — 1 waiting, oldest 14 min
Result	☐ Matches plan ☐ Issue: _____

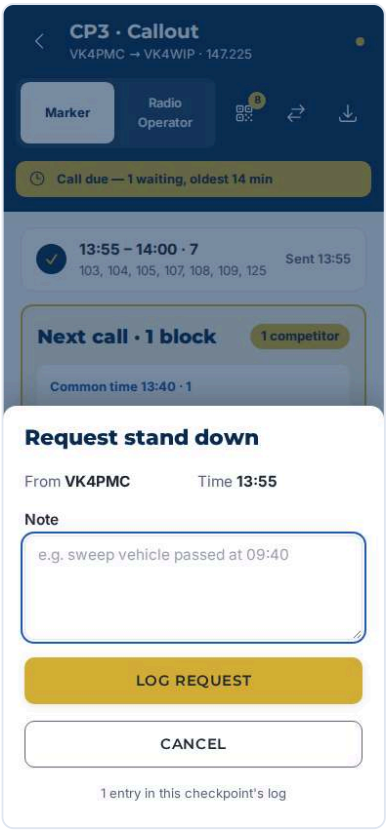

CO-08 390×844

Plan	§4.6
Event	**Tap "Log message"**
Plan says	*v1 can open a simple notes modal / log entry.*
App showed	• Log: "Message 1 logged at 13:55" · aria-live=polite
Status line	Call due — 1 waiting, oldest 14 min · Message 1 logged at 13:55
Result	☐ Matches plan ☐ Issue: _____

Appendix — the plan (IMPLEMENTATION_SPEC.md, verbatim)

RaceTracker Pro — VK4WIP UI redesign: implementation spec

Status: approved design, ready to build. Design sources: `design/screens/*.dc.html`.

Target repo: `bwhite001/RaceTrackers` (React 18, Vite, Tailwind, Zustand, Dexie v10, PWA).

Owner: Brandon White VK4BRW. Club: Ipswich & District Radio Club, Inc. (VK4WIP).

---

1. Goals

1. Restyle the whole app on the VK4WIP brand (navy / blue / gold / red, Montserrat + Inter).
2. Make checkpoint work safe and fast on a **phone**, one-handed, in sunlight.
3. Rebuild base station as a **receive** workflow — the inverse of a checkpoint read-out — that works on **tablet (primary), phone and desktop** without being tall.
4. Follow the WICEN radio procedure (see `reference/` PDF): Scores Checkpoint calls, common times in 5-minute blocks, every number read individually.
5. Let anyone fix mistakes: undo everywhere, edit times, restore accidental unmarks, base-controlled DNF/DNS, and data-check reports.

Non-goals: real-time device sync, RFID, new auth. Radio phrases are **not** shown in the UI (they live in `docs/radio-procedure.md` for the user guide).

---

2. Global rules (apply everywhere)

#	Rule
G1	**Every bib is handled individually.** Never collapse numbers into ranges ("144 to 148") in call-out, read-out, base receive, or previews. Ranges are only accepted in *Race setup* to define the field.
G2	**Common times are 5-minute blocks** (07:40, 07:45 …) unless an operator types an exact time. Block = `floor(minutes / 5) * 5`.
G3	**Times are never in the future** and never before race start. Base is often 45–60 min behind, so past blocks must be one tap away.
G4	**24-hour times** (`07:45`), Australian English, en-AU dates.
G5	**Undo** after every destructive or bulk action (snackbar/inline Undo). Two-tap confirm for "Cancel call" when it would discard data.
G6	Touch targets ≥ 44px (primary actions 48–56px). Real `<button>` / `<input>` / `<label>`; icon-only buttons need `aria-label`. Text contrast ≥ 4.5:1.
G7	**Status colours stay inside the club palette and differ by lightness/border, not hue alone** (see §3.3). Users may still recolour in Settings.
G8	One gold primary action per screen. Red only for DNF / destructive / safety alerts.
G9	No emoji in UI (replace existing ones, e.g. 📝 📋 🏃 in base views). Use line icons (Heroicons outline is already a dependency).
G10	Use `src/services/timeUtils.js` for all time maths; store ISO strings. The designs use a fixed demo clock of 07:47 — replace with real now.
G11	Respect module isolation (CLAUDE.md): checkpoint code only touches `checkpoint_runners`; base only `base_station_runners` + base tables.

---

3. Design system

3.1 Tokens (`design-tokens/`)

Replace the Tailwind-default navy/red/gold in `tailwind.config.js` and the CSS variables in `src/index.css` with the values in `design-tokens/tailwind.vk4wip.js` and `design-tokens/tokens.css`. Keep existing class names working by aliasing (`primary-*`, `navy-*`, `accent-red-*`, `accent-gold-*`, `gold-*`) — see the comments in that file.

Token	Hex	Use
navy	`#0B2D53`	App bars, headings, "called in" state, selected chips
blue	`#1E5CB3`	"Passed" state, links, focus rings, secondary buttons, info
gold	`#D4AF37`	Primary button (ink text), "call due", pending/needs-attention, active-tab underline
red	`#CC0000`	DNF, destructive actions, overdue/safety alerts only
ink	`#222A35`	Body text; text on gold
muted	`#5A6579`	Secondary text (do **not** lighten — contrast)
paper	`#F7F8FB`	Page background
band	`#EEF3FA`	Panels, selected rows, segmented-control track
border	`#E0E6F0`	Card / divider borders

surface-alt	`#E9F2FF`	Light text on navy
Tints	`rgba(30,92,179,.1)` blue · `rgba(212,175,55,.1)` gold · `rgba(204,0,0,.1)` red	Backgrounds for states

Radii: 6 (chips), 10 (buttons, inputs, tiles), 12 (cards), 14 (sheets), 9999 (pills/badges). Shadows: `0 2px 10px rgba(0,0,0,.08)` (buttons/cards), `0 10px 30px rgba(0,0,0,.18)` (sheets/toasts).

3.2 Typography

- **Montserrat** 600/700/800 — headings, bib numbers, button labels, big times. Bib numbers use `font-variant-numeric: tabular-nums`.
- **Inter** 400–700 — body, labels, tables.
- Load both via the PWA (self-host or Google Fonts with `display=swap`; precache in the service worker so they work offline — bump the PWA version per CLAUDE.md).
- Keep the existing `--font-scale` setting; all sizes scale with it.

3.3 Runner state styles (single source of truth — put in a `statusStyles.js` helper)

State	Tile / chip	Label
Not passed	white, 1px border `#E0E6F0`	—
Passed (not called in)	solid blue, white text	time `07:44`
Passed, edited after call-in	solid blue + `✎` prefix on time	"Correction" chip in lists
Called in	solid navy, white text	`✓ 07:31` (gold tick)
Unmarked earlier (restorable)	white, **2px dashed blue**	`was 07:37`
DNS	paper bg, **1px dashed muted**, number struck through	`DNS`
DNF	red tint, **2px red border**, red text	`DNF`
Base check: OK	solid blue	—
Base check: info (e.g. not seen at previous CP)	solid blue + 2px navy border	note
Base check: warning (duplicate / already logged)	white, 2px gold border	note
Base check: rejected (not in race / out)	white, 2px red border, struck through	note

3.4 Buttons

Montserrat 800, uppercase, letter-spacing .6px, radius 10, min-height 48.

- **Primary**: gold bg, ink text, shadow. One per screen.
- **Secondary**: transparent, 2px blue border, blue text.
- **Neutral solid**: blue bg, white text (Add, Next block).
- **Plain**: white, 1px muted border, ink text.
- **Destructive**: red bg white text (Mark DNF) or red outline (Cancel call, first tap).
- **Disabled/locked**: white or band bg, dashed border, muted text, `cursor: not-allowed`, `disabled` attribute.

3.5 Shared shell components (build first, Phase 0)

Component	Spec	Design ref
`AppBar`	Navy bar. Phone: back button (44px), title (Montserrat 700 18px), subtitle (12px `#E9F2FF`), right "Saved" status (8px gold dot). Base: badge (32px white circle with `public/pwa-512x512.png`), "Base · VK4WIP", "147.225 · now HH:MM", inline tabs, single row on tablet.	all
`CheckpointTabBar`	Bottom nav, 72px, 3 tabs (Mark off, Callout, Overview), line icons, active = navy text + 3px gold top border, `aria-current="page"`. Callout tab shows a gold count badge = runners passed but not called in.	`CpMarkOff`
`BaseTabs`	Inline in AppBar: Receive · Overview · DNF / DNS · Reports. Active = white bold + 3px gold underline. Horizontally scrollable on phone.	`BaseEntry`
`StatTile`	Small tiles with Montserrat 800 number + 11px label. Gold variant for "To call in".	`CpMarkOff`
`UndoBar`	Dark ink pill above tab bar or inline status line with an Undo button (gold or ink). Auto-dismiss ~6s, cleared by the next action.	`CpMarkOff`, `BaseEntry`
`BottomSheet`	Navy 55% scrim, white sheet radius 14 top, `role="dialog"`, closes on scrim tap / Cancel.	`CpMarkOff`
`TimeStepper`	−5 / −1 / big time / +1 / +5. Clamp to [race start, now].	`CpMarkOff`, `CpOverview`
`BlockPicker`	Horizontally scrolling row of 5-minute block buttons (64×48), labels `done` / `next` / `this call`, selected = navy; plus an "Exact" time input at the end (dashed when unused, navy when set).	`BaseEntry`
`NumberPad`	3×4 grid: 1–9, ⌫, 0, Add (blue). 46–52px keys. Always paired with a real numeric `<input>` that also accepts keyboard + Enter.	`BaseEntry`
`BibChip`	Number (Montserrat 800 18–20px) + optional 10–11px note; style per §3.3; tap = remove (with Undo).	`BaseEntry`

4. Screens

Each section: route → component(s) → layout → behaviour → data. Design file in brackets.

4.1 Home / role picker [`Home.dc.html`]

Route `/` → `components/Home/Homepage.jsx`.

- Navy header: badge, "RaceTracker", "Ipswich & District Radio Club · VK4WIP", "Offline ready" status. Current race card (name, date, checkpoint count, start time).
- Three role cards (≥76px): **Checkpoint**, **Base station**, **Race setup** — icon tile, title, one-line description, chevron. Navigation protection unchanged.
- Primary button at bottom: **Scan race QR code** (existing import flow).
- Footer lockup: "Ipswich & District Radio Club · VK4WIP".

4.2 Race setup [`RaceSetup.dc.html`]

Route `/race-maintenance/setup` → `components/Setup/RaceSetup.jsx`. Restyle only; keep the 4-step wizard.

- Navy header with step "Step 3 of 4 · Runners" and a 4-segment gold progress bar.
- Runner ranges input (ranges allowed **here only**), live count ("250 runners will be created") and first/last preview chips.
- Link to CSV / WebScorer import. Back (secondary) + Next (primary).

4.3 Share config [`ShareConfig.dc.html`]

Existing QR export: large QR in a white card with shadow, runner/checkpoint count; Download / Email / Copy tiles; primary "Show full screen" (`QRDisplayFullscreen`). Note "Works without internet — device to device".

4.4 Settings [`Settings.dc.html`]

`components/Settings/SettingsModal.jsx` (may become a page on phone). Sections: Display (Theme segmented: Light / Dark / Sunlight; text-size slider), Status colours (rows with swatch, name, description; "Reset to club colours"), Race data (Share or import race config).

- **Sunlight** = new high-contrast theme option (pure white bg, ink text, thicker borders). Optional for v1 — if skipped, show Light/Dark only.

4.5 Checkpoint — Mark off [`CpMarkOff.dc.html`] (interactive)

Route `/checkpoint/:checkpointId` → `views/CheckpointView.jsx` + `components/Checkpoint/RunnerGrid.jsx`, `QuickEntryBar.jsx`.

Layout (390px phone): AppBar (checkpoint number, location + operator callsign) with 3 StatTiles (Passed, Still to come, **To call in** gold) → quick-entry input + gold **Mark** → status line (aria-live) → group chips (20 per group: 100–119 …, horizontally scrolling) → 4-column tile grid (64px rows) → CheckpointTabBar.

Behaviour:

1. **Tap a not-passed tile** → mark passed at now (actualTime = now, commonTime = block).
2. **Tap a passed or called-in tile** → opens the **Edit sheet** (never unmarks directly — this replaces the current tap-again-to-unmark / double-click behaviour).
3. **Edit sheet**: bib, status line ("Passed · not called in yet" / "Called in to base"), "Marked at HH:MM". TimeStepper (clamped). Primary **Save HH:MM** (or "Keep time" if unchanged). Secondary **Unmark runner**. Cancel.
4. If the runner was **called in** and the time changes → warning box "Base already has 07:31. A changed time goes back on the callout sheet as a correction." Saving sets status back to passed with `correction = true` so it reappears on the callout sheet; tile shows `✎`.
5. **Unmark** → tile becomes "unmarked earlier" (dashed blue, `was HH:MM`) and an UndoBar "142 unmarked · Undo" appears. Undo restores the original record exactly.
6. **Tap an unmarked-earlier tile** → sheet in restore mode: "Unmarked earlier · It had been marked at 07:37", TimeStepper preset to the original, primary **Mark at 07:37**, secondary **Use now (HH:MM)**.
7. Quick entry accepts multiple numbers separated by commas/spaces (individual numbers only), marks each at now, jumps the grid to the group of the first number, message "3 runners marked at 07:47".
8. DNS/DNF tiles are not editable here (use Overview).

Data (`checkpoint_runners`): add `originalTime` (first mark), `editedAt`, `correction` (bool), `unmarkedAt` + `unmarkedTime` (for restore). See §5.

4.6 Checkpoint — Callout sheet [`CpCallout.dc.html`]

`components/Checkpoint/CalloutSheet.jsx`.

- AppBar subtitle: `CP3 · VK4PMC → VK4WIP · 147.225` (checkpoint, operator callsign, base callsign, frequency — from race config; hide pieces that aren't configured).
- **Call-due banner** (gold) when either: ≥ 5 runners waiting, or the oldest uncalled runner is ≥ 5 min old (configurable; WICEN brief: every 5–10 competitors, ≤ ~5 min delay). Text: "Call due — 9 waiting, oldest 6 min".
- Called-in blocks collapse to one compact row (navy tick, `07:30 – 07:35 · 4`, numbers, "Sent 07:36").
- **Next call card** (gold border, gold tint): heading "Next call · 2 blocks", badge "9 competitors", then one white card per pending block: `Common time 07:40 · 5` + the numbers in Montserrat 800 22px separated by `·`.
- Buttons: **Read out** (secondary, opens 4.7) + **Base copied — mark sent** (primary) → marks every runner in the pending blocks `calledIn = true`, `callInTime = now`.
- Below: **Official message** and **Request stand down** (plain buttons; v1 can open a simple notes modal / log entry).
- Corrections (runners with `correction = true`) appear in the pending list tagged "Correction".
- **No radio phrases on screen.**

4.7 Checkpoint — Read-out mode (busy blocks) [`CpReadout.dc.html`] (interactive)

New view, e.g. `modules/checkpoint-operations/components/ReadOutView.jsx`, opened from Callout.

- Header: "Read-out", `CP3 · block 07:45–07:50 · 27 competitors`, progress "X of N copied by base", segmented progress bar (one segment per over: gold = done, white = current, faint = to come).
- Numbers are split into **overs of up to 5 numbers** (`overSize` setting, default 5, range 3–10). **Each bib is its own row** (G1).
- Current over card: lead line `Common time 07:45` (first over) / `Continuing 07:45` (later overs); one row per number with a **checkbox** (28px, whole row is the label, ≥56px tall). The **next unticked** row is highlighted (band bg + 2px blue border + "Read next"); ticked rows go muted with strike-through.
- Primary **Base copied — next** is **locked until every number in the over is ticked** (shows "Tick each number as you read · 2 of 5").
- **Reset** (secondary) clears ticks on the current over. **Previous over** steps back.
- Finishing the last over → done state "All 27 copied", which marks the block called in.
- Persist read-out progress so an interrupted read resumes at the same over.

4.8 Checkpoint — Overview (fix anything) [`CpOverview.dc.html`] (interactive)

Existing overview tab.

- Header: % through, "142 of 250 through", stacked bar (called in / passed not called / to come / out), `role="img"` with aria-label.
- 4 StatTiles: Passed, To come, DNS, DNF. Filter pills: All · Passed · To come · DNS / DNF.
- Scrollable runner list; **tap a row to expand** (one open at a time, `aria-expanded`). Actions by status:

Status	Actions
Called in	TimeStepper, **Undo call-in**, **Reset — not passed**, **Mark DNF** (+ note "Base already has HH:MM. Changing the time sends a correction.")
Passed	TimeStepper, **Mark called in**, **Reset — not passed**, **Mark DNF**
To come	**Passed now (HH:MM)** (gold), **Mark DNS**, **Mark DNF**
DNS / DNF	**Clear DNS/DNF**, **Passed now** (+ note that base is flagged)

- Changing the time of a called-in runner → status passed + `correction = true`.
- Every action shows UndoBar; totals, bar and the Callout badge update live.

4.9 Base — Receive [`BaseEntry.dc.html` , tablet `BaseEntryTablet.dc.html` , phone `BaseEntryPhone.dc.html`] (interactive)

Route `/base-station/operations`, tab **Receive** → replaces `DataEntry` / `BatchEntryLayout` UI in `modules/base-operations`. **One responsive component** — no separate tablet/phone builds.

Layout: AppBar + BaseTabs (single row on tablet). Main = flex-wrap: receive panel (`flex: 999 1 480px`) + checkpoint board (`flex: 1 1 260px`). Tablet landscape (1112×834) and desktop: side by side, **must fit in 834px height without page scroll**. Phone: stacks, receive panel first.

Idle — "Who's calling?": grid (`auto-fill, minmax(140px,1fr)`) of compact buttons (≥64px) for Start, CP1–CP4, Finish: short name, status pill (Due gold / OK / Closed), `VK4PMC · up to 07:15`. "Due" = runners expected and no call for ≥ 8 min (constant `CALL_DUE_MINUTES = 8`, configurable).

Tap a checkpoint → straight into receiving (no separate acknowledge step):

- Header row: CP short name, operator · location, "N to record".
- **BlockPicker** from `lastBlock − 5` to the current block. Default selection = **that checkpoint's next unreceived block** (`lastBlock + 5` , capped at now) — base is usually behind. Chips: `done` (≤ lastBlock, muted), `next` , `this call` (has numbers in this call, blue border), selected = navy. "Exact" input accepts `HH:MM` or `HHMM` between race start and now; sets a non-block time and shows it selected.
- **Numbers box** (scrolls internally, max ~210px): shows **only the current block's numbers**. Switching block clears the box and the typed number (nothing is lost). Other blocks in the call show underneath as pills: "Also in this call: 07:40 · 5" — tap to switch back.
- Input + **Add** + NumberPad side by side (pad `flex: 0 1 220px`). Enter adds. Each added number becomes a BibChip validated live:

Check	Kind	Note
Not in race range	rejected (red)	"Not in race"
Marked DNF / DNS	rejected	"DNF" / "DNS"
Same bib earlier in this call	warning (gold)	"Said twice"
Already logged at this checkpoint	warning	"Had 07:40"
Not logged at previous checkpoint	info (navy border)	"Not seen CP2"
Otherwise	ok (blue)	—

Only **ok + info** are recorded. Tap a chip to remove (Undo).

- Status line (aria-live) + inline **Undo** when available.
- **Action row** (`repeat(auto-fit, minmax(110px,1fr))`):
- **Cancel call** — red outline; if numbers exist, first tap turns solid red "Tap again to cancel" and says how many will be dropped.
- **Clear 07:40** — clears all numbers in the current block (Undo).
- **Next 07:45 →** — move to the next 5-minute block, clear the box; disabled "At now" at the current block.
- **Complete · N** — gold primary; records the call.
- **Complete** → writes base_station_runners (`commonTime` = each number's block, `markOffEntryTime` = now, `checkpointNumber`), writes a `radio_calls` record, updates the board (count, last call = now, `lastBlock` = max block received). Done card: "N recorded at CP3", "Blocks 07:40, 07:45 · 2 skipped (flagged)", **Undo** (reopens the call, reverts writes) and **Next call**.
- **Checkpoint board**: rows with short name, "Up to 07:15 · 30 min behind · call 11m ago", count, Due/OK/Closed pill; active checkpoint row gold-tinted. "behind" shown when ≥ 15 min.

4.10 Base — Overview [`BaseOverview.dc.html`]

Existing overview tab restyled: red overdue alert banner (`role="alert"` , "View runners" → Reports › Overdue), stat tiles (On course, Finished, DNS, DNF), checkpoint progress bars (navy = closed out, blue = arriving, gold = finish), leaderboard table with filter pills (All, Female, Male, Wave 1…), gold rank badge for #1, overflow-x box on phone.

4.11 Base — DNF / DNS [`BaseStatus.dc.html`] (interactive)

Tab **DNF / DNS** → evolves `BulkDnsView.jsx` + `WithdrawalDialog.jsx` . Base is the authority for race-wide DNF/DNS.

- **Bulk add** panel: DNF/DNS segmented toggle (DNF active = red). DNF shows **Where** pills (CP1–CP4, On course), **Reason** pills (Injury, Self-withdrew, Cut-off, Medical, Other — optional, tap again to unset), **Time** (−5/+5, clamped). DNS shows a one-line explainer.
- Input accepts **one number or a pasted list** (`212, 218 224` — commas, spaces, semicolons, newlines). Chips validated:

Check	Kind	Note
Not in race / listed twice	rejected	"Not in race" / "Listed twice"
Already this status	rejected	"Already DNF"
Currently the other status	warning	"Was DNS — will change"
DNS but recorded at a checkpoint	warning	"Seen CP2 — started"
DNF at CPx but seen at a later CP	warning	"Seen later at CP3"

- **Clear list** + primary **Mark 6 as DNF** (red for DNF, gold for DNS; disabled when 0). Undo.
- **Out of the race** panel: totals "3 DNS · 3 DNF", filter pills, rows (bib, status chip, "CP2 · Injury · 07:12" / "Did not start", **Clear** → back in race, Undo).
- DNF writes `withdrawal_records` (checkpoint, withdrawalTime, reason) + runner status; DNS sets runner status `non-starter` . Audit-log every change.
- Open question for Brandon (default shown): checkpoint-marked DNFs count immediately; a future "confirm" queue is out of scope.

4.12 Base — Reports & data checks [`BaseReports.dc.html`] (interactive)

Tab **Reports** → evolves `ReportsPanel.jsx` , `ReportBuilder.jsx` , `DuplicateEntriesDialog.jsx` , `MissingNumbersList.jsx` .

Layout: sidebar (`flex: 1 1 250px`) + report panel (`flex: 999 1 520px`); stacks on phone.

Reports (CSV + Print buttons; reuse existing export utilities):

Report	Content
Overdue runners	Bib, last seen (CP + time), expected at, overdue minutes (gold badge; red ≥ 60). Expected time = last seen + typical split for that leg (median of recorded splits).
Still on course	Not finished and not out, grouped by last checkpoint passed (tiles). For sweep / stand-down.
Times by checkpoint	Matrix bib × CP1…Finish (common times; DNF/DNS shown in place).
Call log	Per checkpoint: calls received, numbers, last call time, up to (lastBlock). From `radio_calls` .

Needs attention (sidebar group with total gold badge; each item red count badge or ✓). Each issue row: bib, headline, detail, 1–2 action buttons; resolving removes it (Undo).

Check	Detection	Actions
Duplicates	same bib, same checkpoint, >1 base record (different or same time)	Keep A / Keep B (or Merge if identical)
Out of order	time at CP(n+1) < time at CP(n)	Ask CPx (flag for radio check) / Mark checked
Skipped a checkpoint	has later CP time, missing an earlier CP	Ask CPx / Mark checked
Seen after DNF / DNS	checkpoint time after DNF time, or any time while DNS	Clear DNF/DNS / Remove that time
Unknown bibs	numbers outside the race reported in calls (keep them in `radio_calls.rejected`)	Remove / Keep for review
Impossible pace	split speed above a threshold (default > 20 km/h; checkpoint distances from race config, e.g. CP1 5 km, CP2 11 km, CP3 14.5 km, CP4 17.5 km)	Ask CPx / Mark checked

Resolutions persist in a new `data_issue_resolutions` table so resolved items don't reappear; "Mark checked" = acknowledged, data unchanged.

---

5. Data model changes (Dexie v11 — additive)

Add `this.version(11).stores({...})` , keeping v10 tables. New indexed fields only where queried; others are data columns.

```
this.version(11).stores({
  checkpoint_runners: "++id, [raceId+checkpointNumber+number], raceId, checkpointNumber, number, actualTime, commonTime, calledIn,
markOffTime, callInTime, status, notes, correction",
```

```
  base_station_runners: "++id, [raceId+checkpointNumber+number], raceId, checkpointNumber, number, commonTime, markOffEntryTime,
status, notes, callId",
  radio_calls: "++id, [raceId+checkpointNumber], raceId, checkpointNumber, receivedAt, undoneAt",
  data_issue_resolutions: "++id, [raceId+issueKey], raceId, issueKey, resolvedAt",
  readout_progress: "++id, [raceId+checkpointNumber+blockTime], raceId, checkpointNumber, blockTime",
});
```

Table / field	Purpose
`checkpoint_runners.originalTime`	first marked time (restore)
`.editedAt`, `.correction`	time changed after call-in → resend
`.unmarkedAt`, `.unmarkedTime`	"was HH:MM" restore after accidental unmark
`base_station_runners.callId`	link to `radio_calls`; Undo call deletes by callId
`.manualTime` (bool)	exact time, not a 5-min block
`radio_calls`	`{raceId, checkpointNumber, receivedAt, blocks:[{time, numbers[]}], recorded, skipped: [{number, reason}], rejected:[…], undoneAt}`
`checkpoints` data columns	`operatorCallsigns[]`, `distanceKm`, `locationName` (Receive board, pace check)
`races` data columns	`baseCallsign` (VK4WIP), `frequency` (147.225), `callDueMinutes`, `overSize`
`withdrawal_records.reason`	DNF reason (Injury, Self-withdrew, Cut-off, Medical, Other)
`data_issue_resolutions`	`{issueKey: "dup:142:3", resolution, resolvedAt}`
`readout_progress`	`{tickedNumbers[], overIndex}` for resuming a read-out

Never cross `checkpoint_runners` ↔ `base_station_runners` (G11). Audit-log all base edits (`audit_log`).

---

6. State & logic notes

- Put pure logic in testable services:
- `services/blocks.js`: `toBlock(t)`, `blocksBetween(from, to)`, `nextBlock(t, now)`, `clampTime(t, raceStart, now)`.
- `services/receiveValidation.js`: `checkBaseNumber(num, ctx)` → `{kind: ok|info|warn|bad, note}` per §4.9 table.
- `services/statusValidation.js`: DNF/DNS checks per §4.11.
- `services/dataChecks.js`: one function per check in §4.12, each returning issues with stable `issueKey`s.
- `services/readout.js`: `splitIntoOvers(numbers, overSize)` — **no range collapsing**.
- `services/callout.js`: `isCallDue({waiting, oldestMinutes}, settings)`.
- Base receive call state can live in `baseOperationsStore` as a draft (survives tab switches, cleared on Complete/Cancel).
- Undo: keep a single-level snapshot per screen (`undoSnapshot`), cleared by the next action.

---

7. Accessibility checklist

- All interactive elements are native buttons/inputs; tab bar uses `nav` + `aria-current`.
- Sheets: `role="dialog"`, labelled, focus trapped, Escape closes.
- Live regions for status lines (`aria-live="polite"`) and alerts (`role="alert"`).
- Checkbox rows in Read-out are `<label>` wrapping a real checkbox.
- Progress bars expose an aria-label with the counts.
- States never rely on colour alone (borders, strike-through, text labels).

---

8. Testing (required by CLAUDE.md)

Unit (Vitest): blocks, receive validation, status validation, each data check, `splitIntoOvers` (assert never produces ranges), call-due logic, restore-after-unmark, correction flag.

Playwright journeys (add to `test/e2e/playwright/`, register in `generate-guide.js` `SECTION_MAP` / `CHAPTERS`, regenerate the guide):

1. `checkpoint-edit-time` — mark, open sheet, change time, save; unmark + Undo; unmark, later restore original time.
2. `checkpoint-correction` — called-in runner time edited → appears on callout as correction.
3. `checkpoint-readout` — 12 waiting runners → read-out with 3 overs; next locked until all ticked; Reset clears ticks.
4. `checkpoint-overview-fix` — undo call-in, reset to not passed, mark DNS, clear DNS, each with Undo.
5. `base-receive-blocks` — pick behind checkpoint, default block = next unreceived; add 5, Next block, add 5; switch back via "Also in this call"; Complete; board updates; Undo call.
6. `base-receive-validation` — unknown bib, duplicate, already logged, not seen at previous CP → correct chip states and only valid numbers recorded.
7. `base-receive-actions` — Clear block + Undo; Cancel call two-tap.
8. `base-bulk-dnf` — paste list, warnings shown, apply, clear one, Undo.
9. `base-reports-checks` — seed a duplicate and an out-of-order time; resolve both; counts reach ✓.
10. Viewports: run 5 at 1112×834 (tablet landscape — assert no vertical page scroll on Receive) and 390×844.

---

9. Phases

Phase	Scope	Done when

0	Tokens (`design-tokens/`), fonts, `statusStyles.js`, AppBar, CheckpointTabBar, BaseTabs, UndoBar, BottomSheet, TimeStepper, BlockPicker, NumberPad, BibChip; remove emoji	Existing screens render in new palette; tests green
1	Home, Race setup, Share config, Settings restyle	Matches designs
2	Mark off (edit sheet, undo, restore) + Overview (fix anything); v11 checkpoint fields	Journeys 1, 2, 4
3	Callout sheet + Read-out	Journey 3
4	Base Receive + `radio_calls` + board	Journeys 5–7, tablet height check
5	DNF / DNS bulk + Base overview restyle	Journey 8
6	Reports + data checks + resolutions	Journey 9; user guide regenerated

---

10. Sample data (for seeds / demos only)

From the WICEN brief (`reference/`): Mt Glorious Mountain Trails, Sun 8 Nov 2026, start 06:30, base VK4WIP on 147.225 MHz (+0.6, CTCSS 91.5), simplex fallback 147.500.

CP	Location	Operators	Distance
Start	White Cedar Picnic Area	VK4BRW	0 km
CP1	Northbrook Bush Camp	VK4MUD, VK4MKD, VK4EAR	5 km
CP2	England Creek Bush Camp	VK4IE, VK4TBA	11 km
CP3	England Creek Rd & Joyners Ridge Rd	VK4PMC, VK4JBX	14.5 km
CP4	Near Apiary Site, Joyners Ridge Rd	VK4AJG, VK4DTB	17.5 km
Finish	Maiala Picnic Area	VK4GJW, VK4ENE, VK4NNA	22 km

Runner counts and bib numbers in the designs are illustrative.
